 Installer 0.65MB 2010-11-26	 Archive 0.42MB 2010-11-26	 Beta 0.82MB 2011-11-06	Release Version: 2.90 Release Date: October 2007 Requirements: Windows 9x/NT/XP/2003/Vista/7 Download mirrors
---------------------------------------	-------------------------------------	----------------------------------	--

You can choose to Download the installer file, or download the .Zip file. Zip file, extract it to run it is okay.

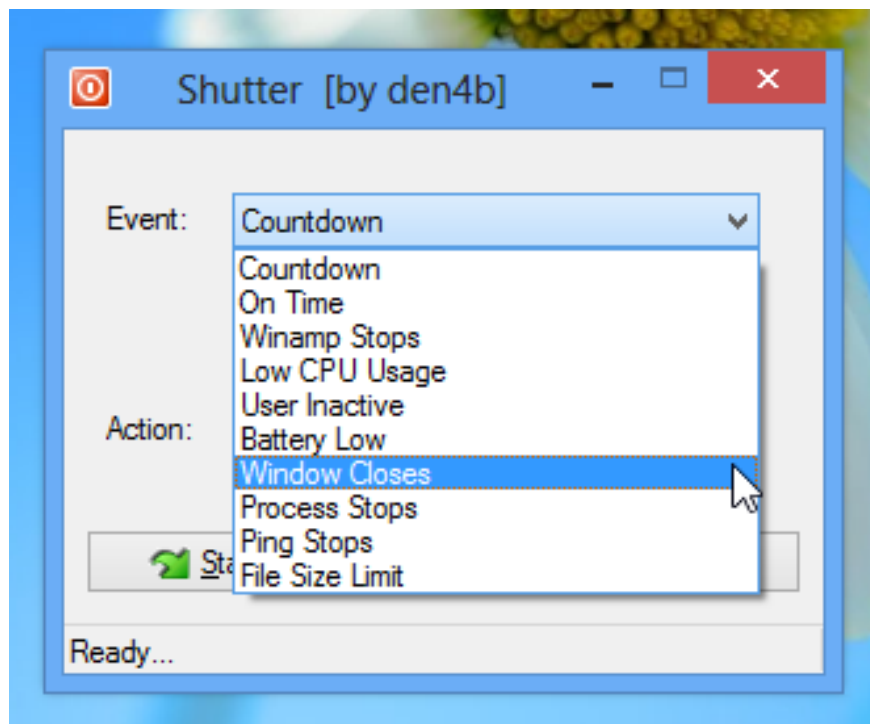

After installation, the software interface is as follows. The latest version has a slightly different interface. But still ensure two parts: **Event** and **Action**.

The Action section will be the options Shutdown, Restart, Sleep, . The Event you can choose when making the selection in Action. As shown in the picture, select Countdown and then set the timer, it will perform Shutdown

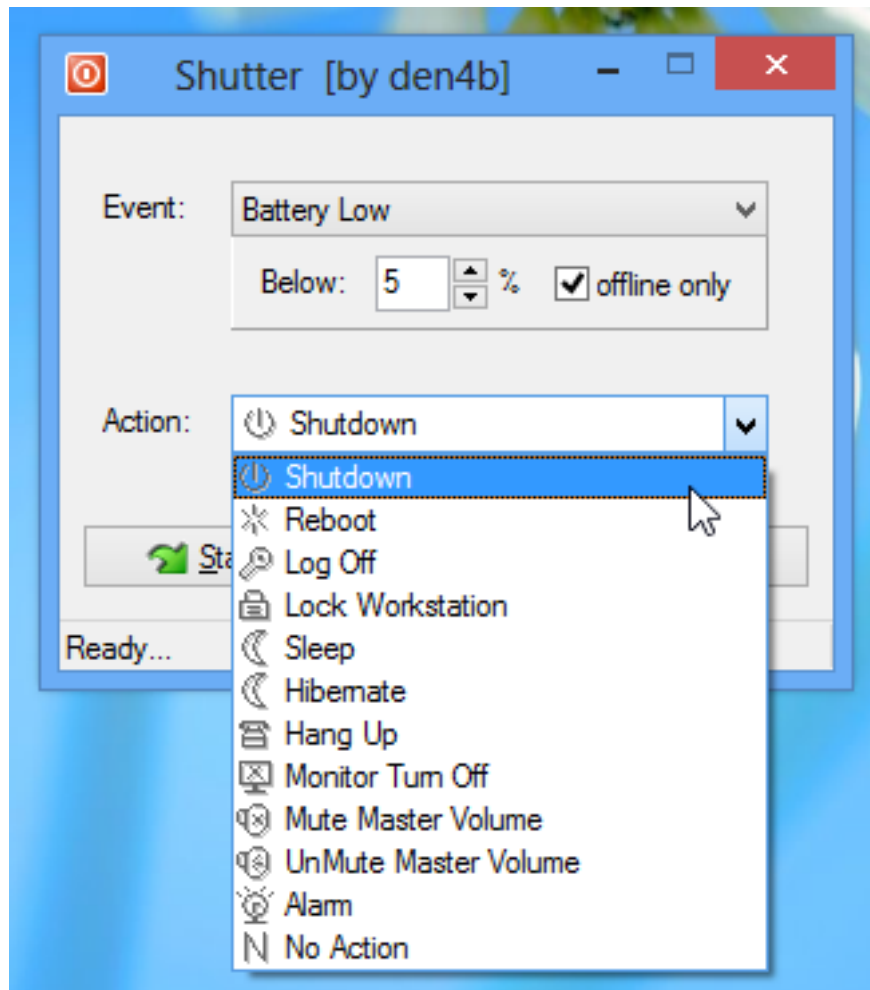

or Restart, . when the timer runs out.

In the Event you have many other options such as: Battery Low - When the Battery is low, Process Stops - When the software, the process on the computer is finished running, Low CPU Usage, On time - Schedule the time, execution time, .

In the **Action** section you can choose **Shutdown**, reboot, hibernate, Sleep, mute audio and more.

Click the Start button to get started. Then you go to sleep well
