

Signs that your phone is infected with a virus

When your phone is infected with Virus, you will encounter a variety of problems and they directly affect your usage.

To detect, learn about the viruses that are invading your phone, there are many different ways. In this article, the Software Tips will introduce to you the signs of phone infection.

1. Show ads on the desktop

Typically, ads will only appear when you use social networking applications, photo editors, games, . and they are not licensed to display ads on the desktop (Home). If you see your phone does not open any applications and ads still appear, then surely you have encountered the Underground Virus is exploiting inside the phone. In this case, the virus directly affects the user experience, sometimes even frustrating you by constantly pressing the wrong ads on the screen.

2. Application often crashes, freeze, reload

When applications and viruses have access to the phone, the first thing they do is to run in the background to exploit information. In the background, the virus will have a feature that does not automatically exit when the RAM overflows and they take up a large amount of resources on the device. At this time, you will feel your mobile device is slower, laggy, applications are thrown out and need to be restarted. The most noticeable point is that when playing games, you will see the familiar games you play everyday slow down significantly and jerky lag continuously.

3. Battery capacity decreases rapidly

The continuous virus, Trojan running on the machine will cause your mobile device to drop battery quickly "no brake". However, this is not an effective way to detect Virus because the battery capacity is long or not, it depends on how you use and operate the phone. In the case of the virus consuming the battery, you will see this problem most clearly through the battery is always in a weak condition.

4. The emergence of a series of "strange applications"

Some types of Trojans and Viruses, when invading the phone, will silently install a variety of different applications on your phone, causing them to run out of space or virtual notifications appear more suddenly. If you encounter this situation, then removing the applications they install is not an effective solution because they are not radical. The best way is to use specialized software to detect the original Virus, Trojan and treat them as comprehensive as possible!

5. Unexplained money is deducted from the phone

Viruses are developed in many different directions and each virus has its own characteristics. A lot of viruses are built in the direction of mining money, the balance in your sim card by creating virtual messages sent to the call center, creating virtual calls, . In this case you will see your phone is deduct money in an unclear manner, and especially for prepaid users who see it most clearly.

6. Image gallery appears "strange image"
