

Simple photo compositing on Microsoft Paint

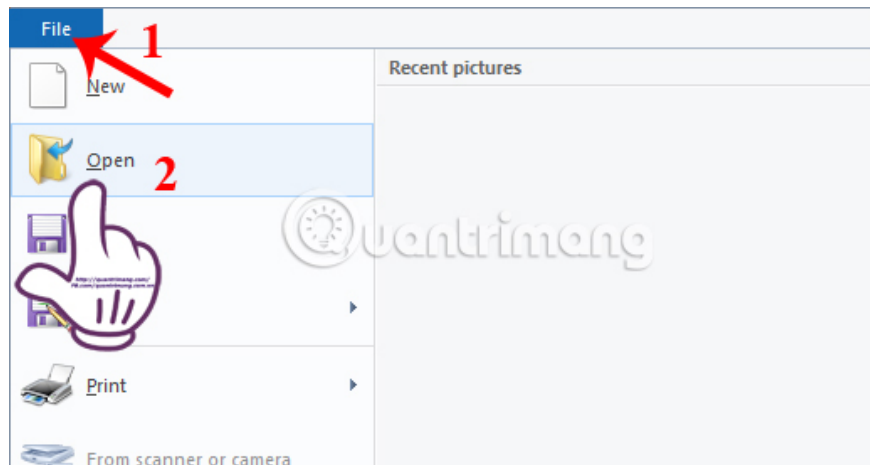

To combine images from two or more images, we can use the Paint tool available on Windows computers right away. You can adjust the blending of images in different sizes without using other tools to support.

Today is not too difficult for you to find a photo editing and editing program, even on your computer or smartphone. However, if we do not have many requirements as well as the purpose of editing too high, professional, we can immediately use the Microsoft Paint tool available on Windows computers.

This tool can meet all the basic needs of users for editing and editing images. For example, you will not need any third-party support tools to be able to combine images from two or more images on Paint, all operations are simple and easy to implement.

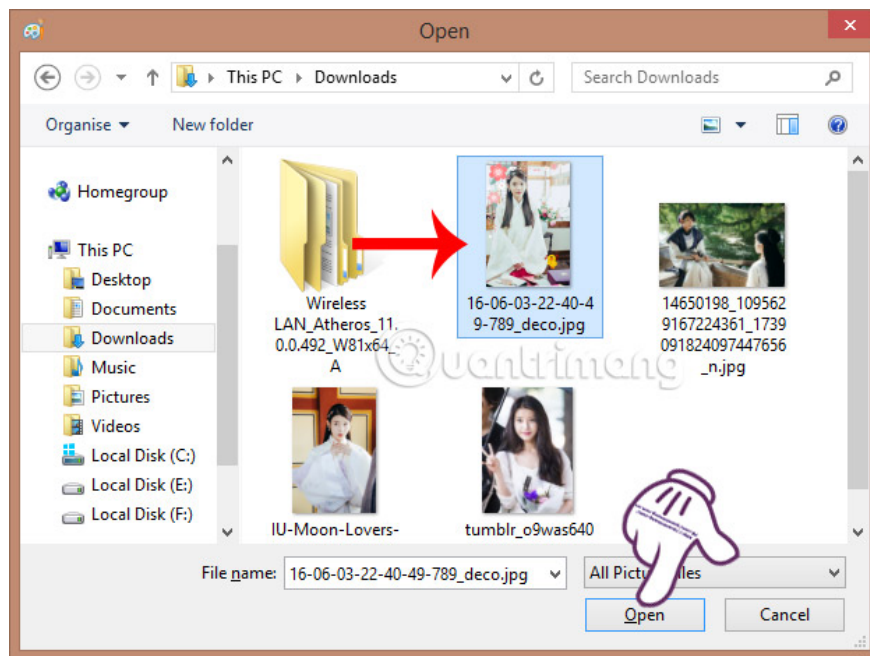

Step 1:

You open Microsoft Paint on your computer to use. In the Paint interface, click **File** and select **Open** to open the image you want to join on your computer.

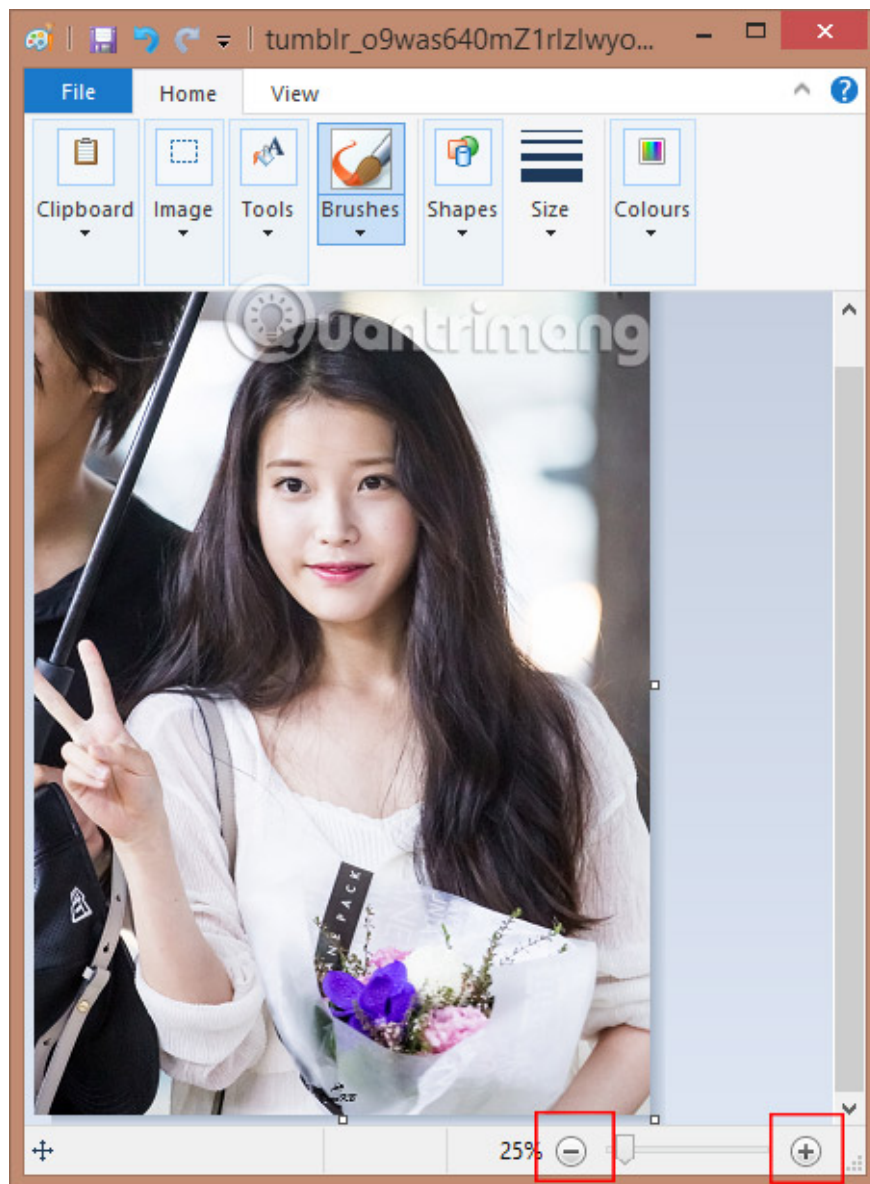

Step 2:

The folder interface appears on the computer. Find the folder where you want to merge photos, select photos and click **Open**.

If the image shows too big on the Paint interface, we can adjust it when clicking on the zoom slider below the interface.

Step 3:

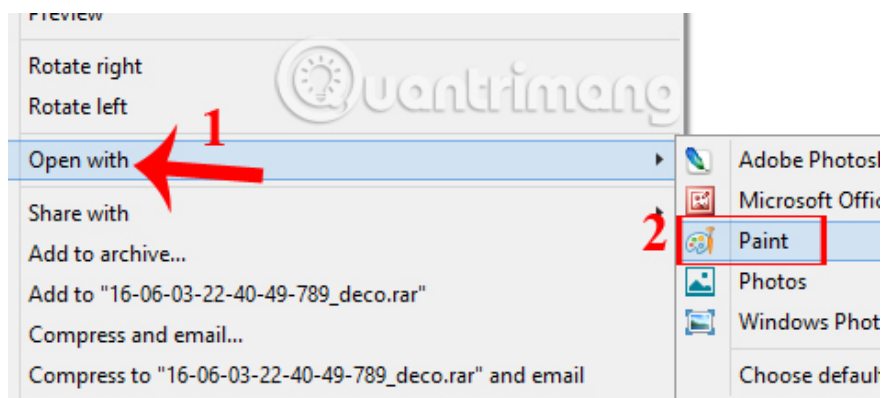

In the first image interface, we will click on **the white square points** on the right or the bottom to **extend the frame of the collage** , depending on the number and type of your collage.

Note , depending on the type of image blending that you want to do, you need to pay attention to the size and height of the image just below the image. For example, I stitched the image horizontally, so I will pay attention to the 1792px vertical size.

Step 4:

Open the second image you want to merge on the new Paint window. Right-click on the second image, select **Open with** and select **Paint** .

Step 5:

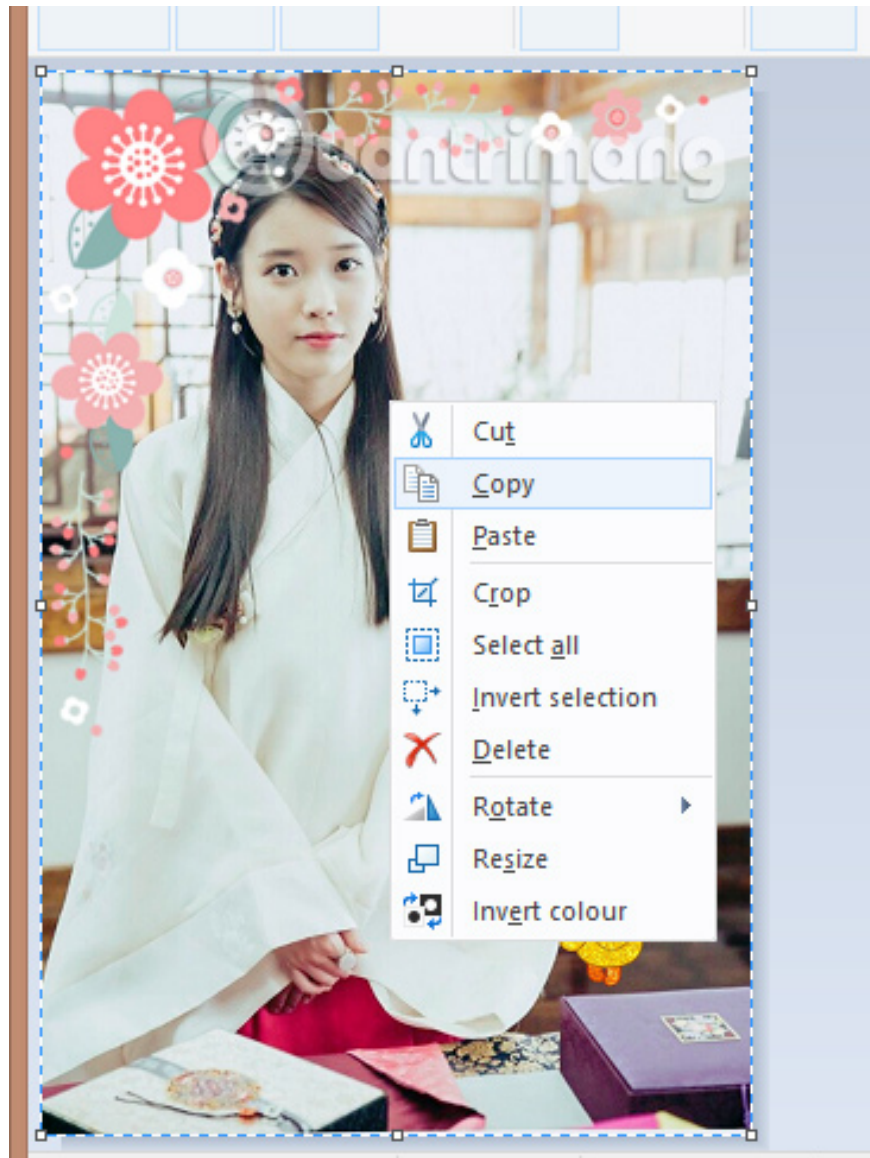

At the second Paint image window, click the **Resize** button. A small window appears Resize and Skew. Next, you will **select the Pixels box** . In the **Vertical** section, **enter the height** dimension equal to the height of the first image, for example 1792px.

Then click **OK** to set the new size for the image.

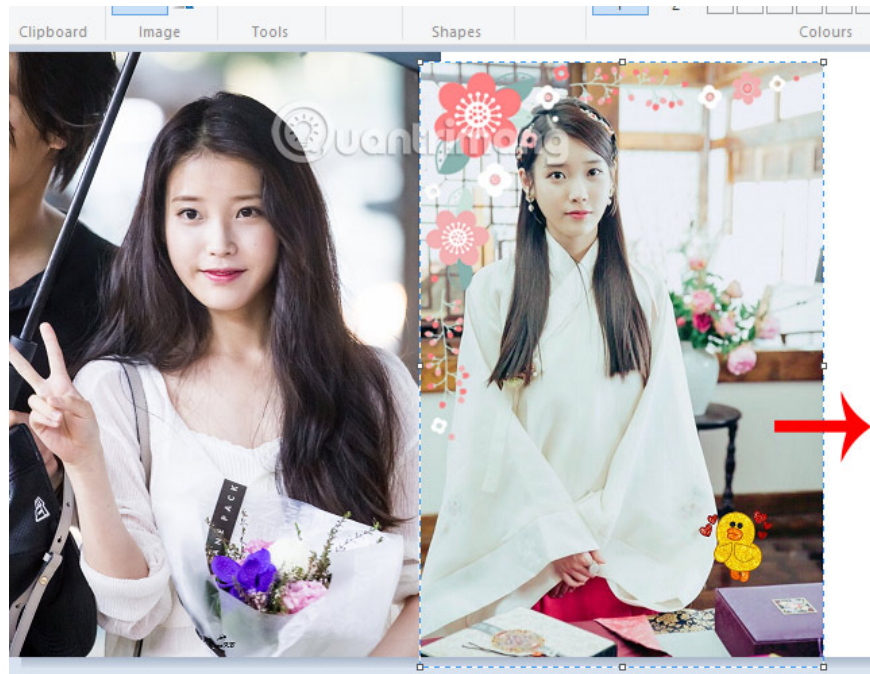

Step 6:

The second image will be taken to the same height as the first photo. After that, press **Ctrl + A** to **Copy** this second image.

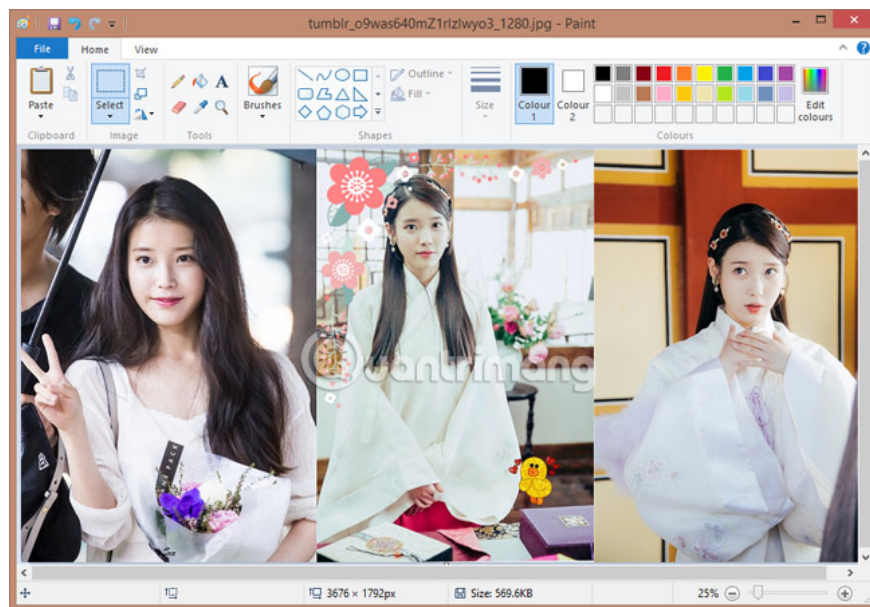

Step 7:

Go back to the Paint interface with the first image, press **Ctrl + V** to paste the second image here. Use the mouse to move the image to the optional position in the collage frame.

We perform the same steps with other images and with different mosaics. **Note** , if you pair with multiple images of different sizes, arrange the photos accordingly.

If you want to save the image to your computer, you only need the **Save** icon to finish.
