Table of Contents:

1. How to install and use UltraViewer on your computer .
2. Instructions on using UltraViewer to control a computer remotely .
3. Things to note when using UltraViewer .

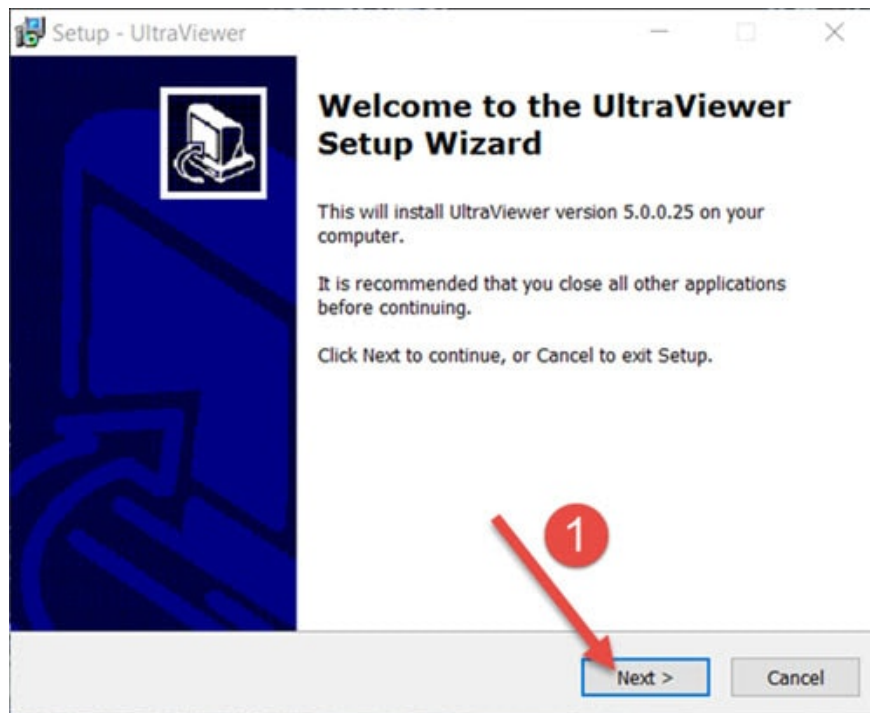

1. How to install and use UltraViewer on your computer

Before using UltraViewer to remotely control a computer, you need to download and install the software on your PC. If you have already installed UltraViewer, you can proceed to section 2 and refer to the UltraViewer user guide below.

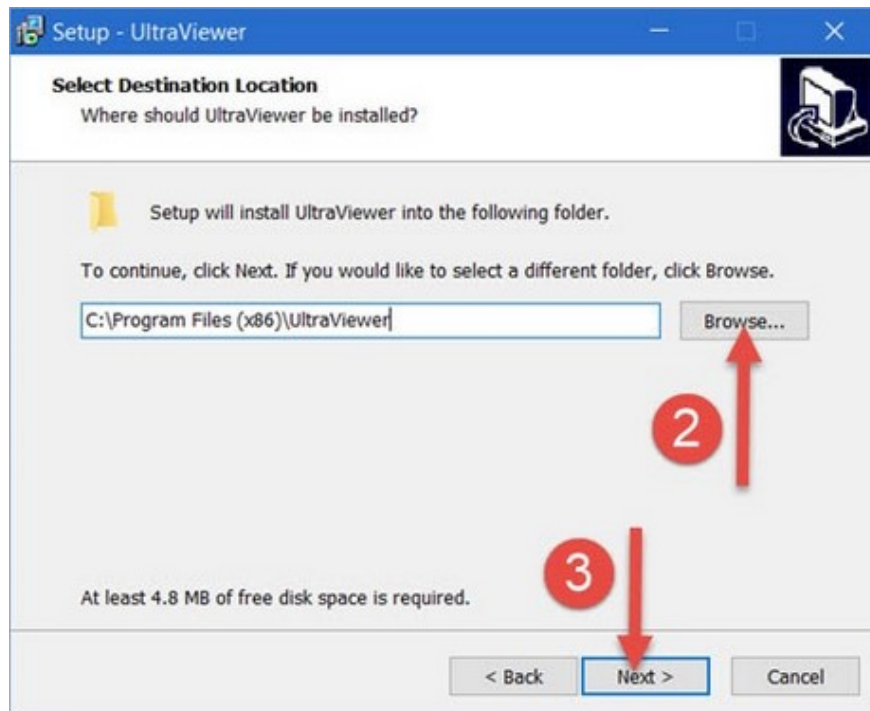

Step 1: First, you need to download UltraViewer to your computer using the download link below.

Download **Ultraviewer** here.

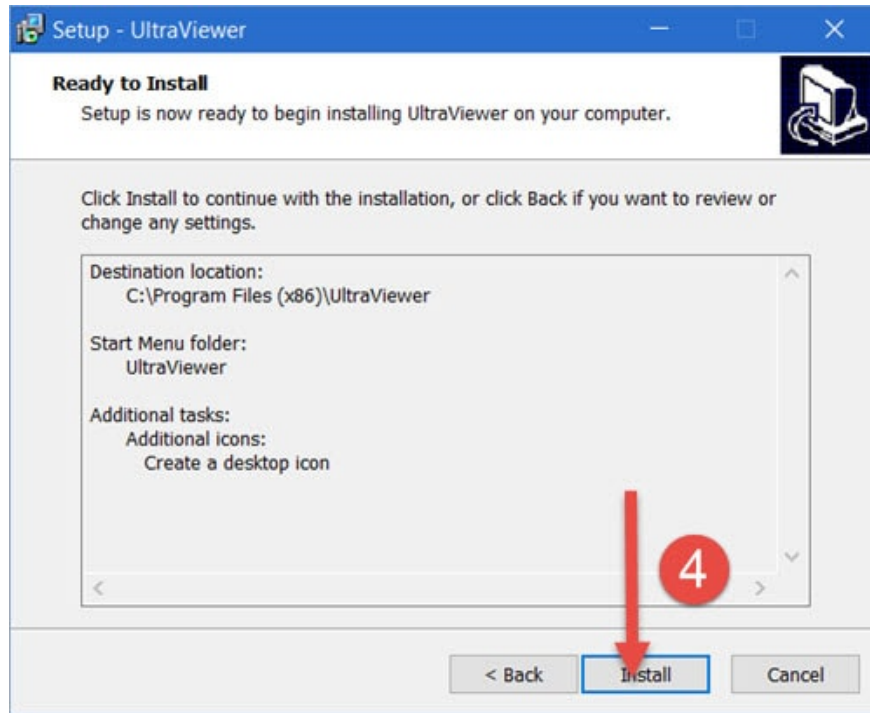

After the download is complete, run the installer file and select **Next** .

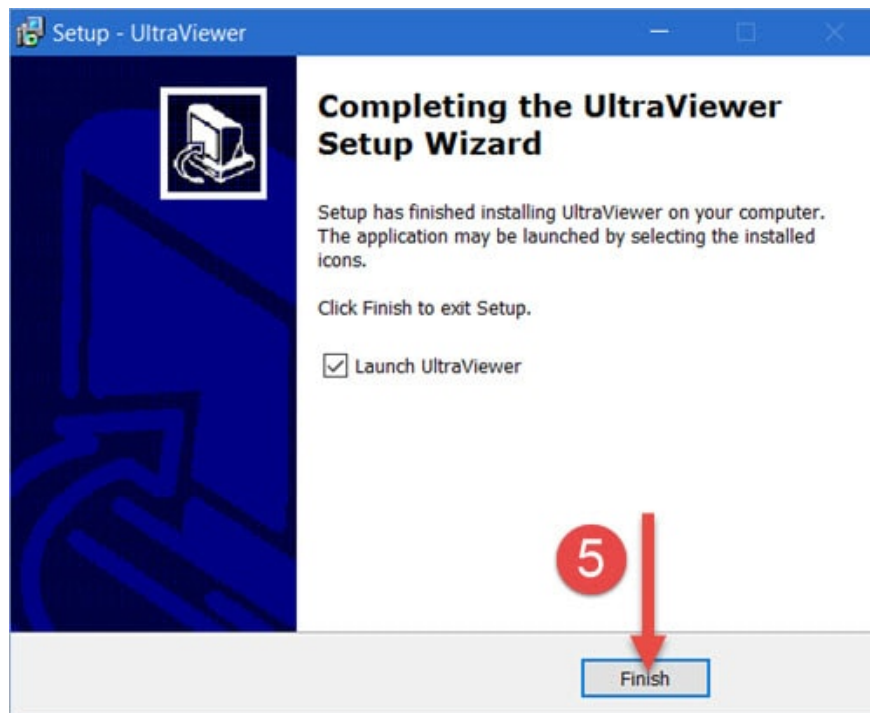

Step 2: Choose the location to install the software, then **click** Next.

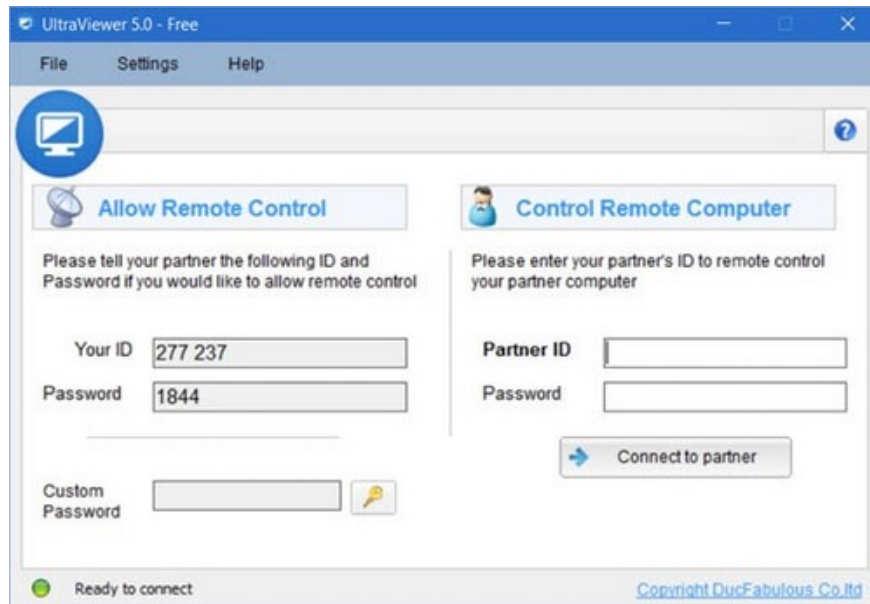

Step 3: Click **Next** until you see "**Install** ," then click on it to install.

Step 4: After the installation is complete, press **Finish** to close it.

- Finally, you can **use UltraViewer** immediately.

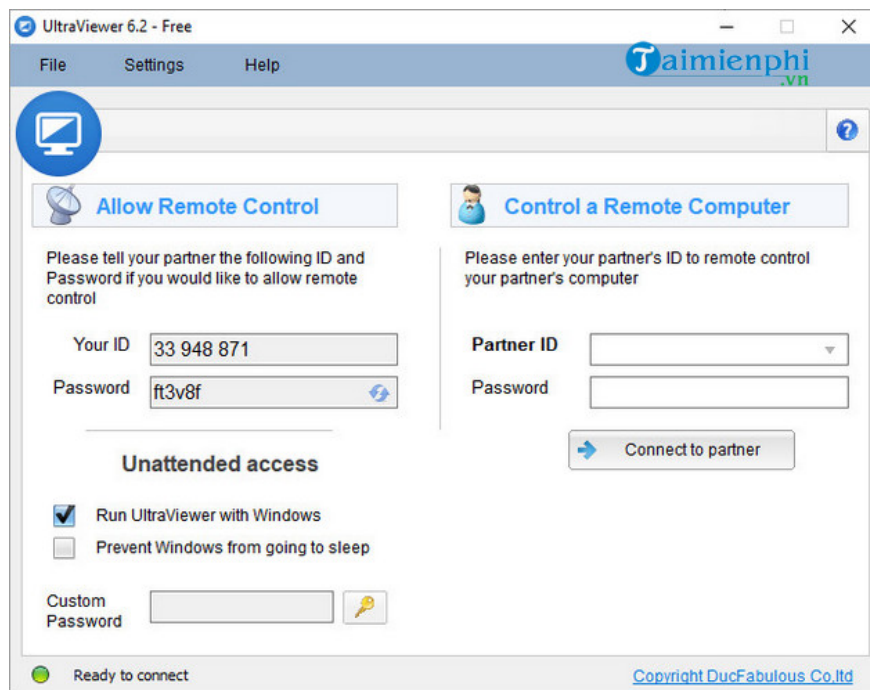

2. Instructions for using UltraViewer to control a computer remotely.

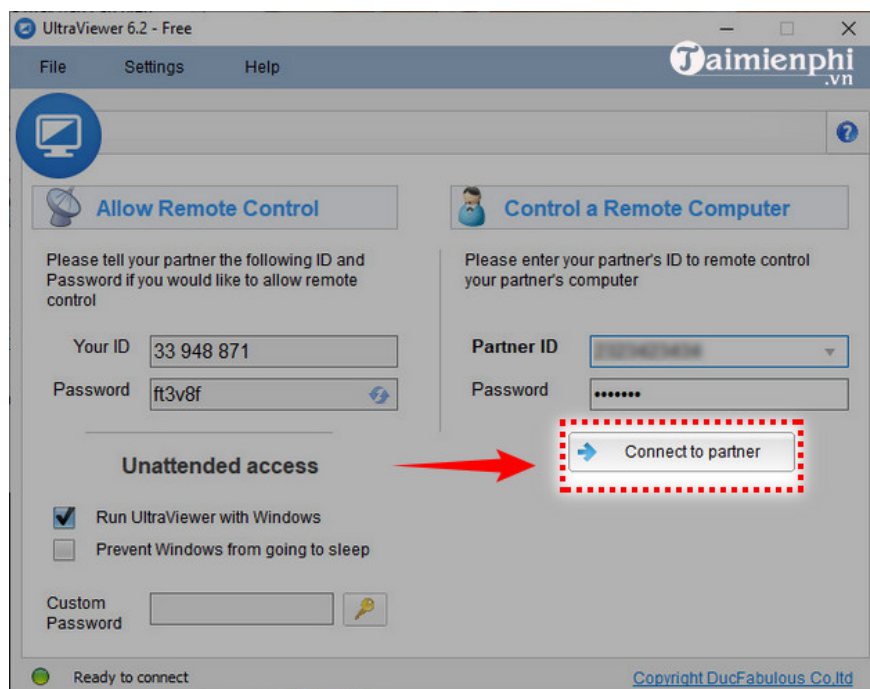

After completing the software installation process, to use UltraViewer on your PC, please follow the steps below.

Step 1: Launch **UltraViewer** . The software interface will have **two main sections** , including:

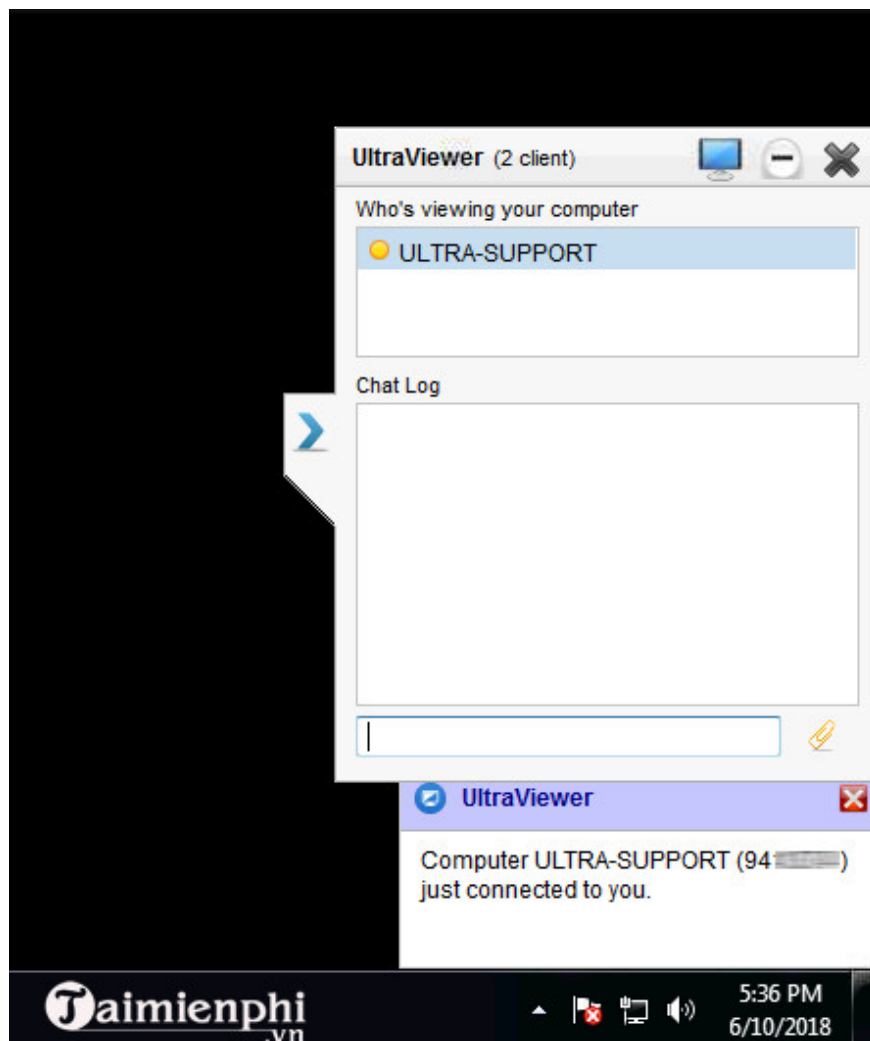

- **Allows control** : Includes ID and password
- **Control another computer** : If you want to control your partner's computer, ask them to send you their ID and password.

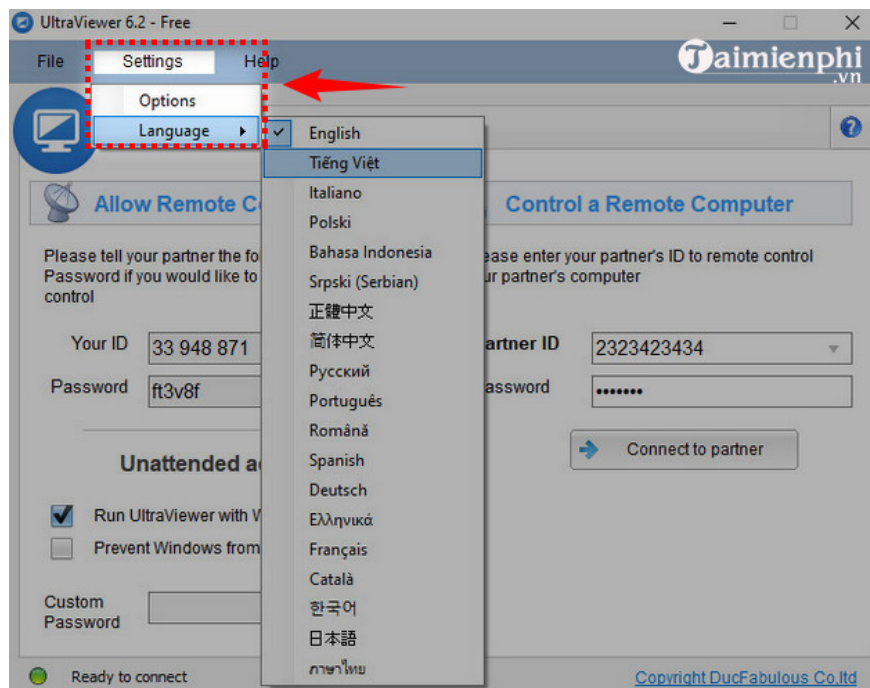

Step 2: In the computer control panel, enter **the Partner ID** and **Password** (the ID and password are provided by the other computer). Then, click the **Start Control** button .

Step 3: Wait **a few seconds for the connection to be successful** . At this point, you can exchange information and instructions on your partner's computer screen.
- Here, you can take screenshots, chat with friends, and customize image quality, screen size, wallpaper display, and mouse cursor.

- Alternatively, if you want to switch to a different language, click on the **Settings menu** , hover over **Language** , and then select **Vietnamese** .

3. Things to note when using UltraViewer on PC and Laptop

Using Ultraviewer is generally safe, but users still need to be very cautious when allowing other computers to connect and access their systems. Here are a few things to keep in mind to ensure the safety of your device.

- **Secure your login information:** Always ensure that you only share your UltraViewer information with trusted individuals. Avoid sharing it with anyone else to prevent security risks.
- **Check the connection list:** Regularly check the active connections on UltraViewer to ensure no unusual activity is occurring.
- **Update your software to the latest version:** Make sure you are using the latest version of UltraViewer to take advantage of security patches and the newest feature improvements.
- **Keep your computer safe:** Don't hesitate to use antivirus software and firewalls to prevent threats from unwanted remote connections.
- **Use in a trusted environment:** Avoid using UltraViewer on insecure public networks where information could be stolen.

With the UltraViewer user guide above, you can easily familiarize yourself with this software and comfortably control computers remotely without having to perform many complicated setup steps.

If users don't want to use a computer, they can easily **control the computer** using Android and iOS phone applications, connecting anytime, anywhere, while still ensuring high speed and absolute security.
