

Small Windows computers like smartphones

With a compact body, Tango computer can also become the ultimate gaming machine as well as meet office tasks.

With a compact body, Tango computer can also become the ultimate gaming machine as well as meet office tasks.

The most special thing in Tango is that despite its small size, just a smartphone, it still has all the components of a desktop computer. Specifications include AMD A6-5200 quad-core 2GHz processor, DDR3 RAM (2-8GB capacity), SSD hard drive (from 32GB - 1TB or higher), 3 USB 2.0 ports, one port USB 3.0, an HDMI port, headphone jack and WiFi connection.

In terms of operating systems, both **Windows 7** and **Windows 8** can run on Tango. Not only that, you can also install any operating system compatible with laptops like Linux, Unix or Chromium.

Accompanying this tiny PC will be a dock. If you put multiple docking stations at home, office, or places that you frequently use, you can bring the Tango PC anywhere without worrying about backing up your data. You just need to remove the device from the dock, put it in your pocket and plug it in again when you arrive at the office the next morning.

Each dock will cost 99 USD in the US (*equivalent to 2.1 million*) but when combined with Tango, it can replace a PC, even a gaming console.

Tango is no different from a regular PC. You don't have to learn how to use the interface, because this is still a Windows PC but can be used anywhere, anytime. You can completely perform tasks such as surfing the web, watching videos or even playing mid-range games. Depending on the configuration, the device is priced from 399 USD to 590 USD (*about 8.5 - 12.5 million*) in the US market.
