

Smart people who are not naturally born are smart but they must work hard to achieve it

Surely few of us know that: Smart people who are not born naturally are smart, but they must work hard to achieve that, right? Let's find out the information in the article below!

1. 15 sayings that are capable of killing your love
2. 5 reasons why "the more intelligent, the harder it is for a lover"
3. 11 characteristics of people with smart thinking

Surely few of us know that: " *Smart people who are not born naturally are smart but they must work hard to achieve that* " right? Let's find out the information in the article below!

There is one thing I - the author of the article - has studied about that intelligence that **very few people are born 'extremely intelligent' as people often see in them** .

Extremely intelligent people should be called by a better name like ' *Extremely hardworking, extremely hard working people* '.

So how can you become a smart person?

1. Things that smart people read

Few things people say come from the brain, which comes from what we learn and learn in reality.

Think about this.

We often share the things we understand and the things we know tend to become experiences, but one thing worth noting is that they all come from what we read.

Really smart people often read a lot . However, the things they choose to read are very good.

Very smart people don't take the time to look for friends from high school (*those who didn't contact 10 years ago*) to announce that they are getting married. They did not take the time to read magazines that were placed next to the candy bars in the grocery store. They don't watch too many TV shows, don't surf Facebook unconsciously all day. It is useless to them and especially they never get upset about the unhappy things repeating every day.

Smart people will read what is needed and they want to learn it from better people.

That's why when they share what you admire, ' *Wow! That person is smart!* ' .

2. Good people are always looking for better people around them

Think about the 5 people you spend the most time with.

Among them are about 3 people better than you?

Is not?

Keep the 2 heads and you will replace the 3rd person.

I am not saying that you should not make friends with people who are not good , but if you want to be a really smart person, you should **invest your time wisely** .

That's why we should spend time with people who can motivate you to strive better.

I am 27 years old and at this age I have done some really *cool and cool things* in the eyes of others. And the result is that people think that I'm an intelligent person, for them I might have been '*successful*' in some way. But honestly I am not a successful person because compared to the 5 people I spend time talking with, it can be said that they are extremely intelligent and successful in many fields in different ways. .

And that's the problem I want to talk about here.

Spend time with extremely good people who will gradually become better.

Extremely clever people teach me many things and they show me who they are, what they have done and how I can be like them. And hopefully I can achieve a certain progress.

If you want to become smarter, talk to smarter people.

3. Ever made a lot of mistakes

With intelligent people what they say, what they do shows their knowledge. However, people who are really smart they ask themselves higher, must have knowledge, check whether it is reliable or not. That transforms a pure source of knowledge into a knowledge '*power*' .

You know when you're talking to someone, just repeat what someone else told them or if they're talking about the experience. Who would you trust more?

Of course, you will believe the person who lived with it, go through it, learn something and then learn more.

Anything I read I tested. If I read a book about time management, I will try to arrange my 2-week work in the way the book is written to see how it works.

When I read the book about marketing, I will try to practice it in my life. If something I do not understand about how it works, I will reevaluate myself.

And what happens? I made a lot of mistakes. And I learned from it a little bit, a little bit.

4. Know something a little

Being a really good person is more important than awareness.

For example, I am a very good person in the music field but I know almost nothing about history and geography. If a friend asked me about the Party like: " *Who is the 5th President of the United States?* ", I certainly won't have an answer.

At that time, I might be a stupid or poorly intelligent kid.

Not to mention that the more you know, the more you know how to apply it to something.

" *Very smart* " people are those who have a little knowledge of everything. Regardless of where the conversation takes place, they can add something valuable - or at least contribute an interesting event somewhere.

Not to mention far away, the more you know about everything, the more you can apply them to " *one thing* ".

Whatever your main background knowledge, adding random things is too normal.

Believe me, if you meet two scientists standing next to each other and one of you knows how to dress, play guitar and know who is the winner in the World Series last year, you won't call them informants smart; but call them a " *genius* ".

Our society appreciates that.

5. Work hard

We believe that some people are inherently smart and others are not.

But the truth is, **99% of the best people in the world when born are not brilliant smart people** . They are encouraged to keep learning and studying.

If you really want to be a successful person, believe that you can.

And you can do it.
