

Smooth play configuration LOL, configure League of Legends play on the computer

This is a configuration that you can play smoothly with minimal graphics at LMHT and configure the requirements to help you play League of Legends at High Settings.

Smooth play configuration League of Legends is always a problem that many gamers care about when this game is still extremely hot by moba genre. And although many versions have been upgraded, the configuration LOL is no different from the early versions.

Therefore, it is not difficult to configure smooth play of League of Legends at the present time so players can build at a reasonable price. Especially for students who buy laptops for learning, they can play LOL smoothly on their computers.

So the minimum requirement for smooth playing of League of Legends and the requirement for in-game hardware is too high for gamers. You can refer to the LOL configuration in this article.

1. Configuration of Assassin's Creed Unity on the computer
2. Configure play Warhammer: Chaosbane on the computer
3. Configure Play Layer Of Fear 2 on the computer
4. Call of Duty: Mobile configuration

Minimal configuration smooth play League of Legends

1. **Operating system:** Windows 7, Windows 8, Windows 10

2. **Processor:** 2GHz supports SSE2 and above
3. **RAM capacity:** 2GB RAM
4. **Graphics card:** Support for Shader 2.0 and above
5. **Free hard drive capacity:** 8GB

A fairly simple configuration for gamers, even when playing lol on a laptop or PC, this configuration is still considered quite easy. The price for this configuration will range from 5 to 6 million to play smoothly LOL.

Configuration recommended smooth play League of Legends

1. **Operating system:** Windows 7, Windows 8, Windows 10
2. **Processor:** 2.4 GHz Dual Core Processor or 3 GHz Processor
3. RAM capacity : 4GB RAM
4. **Graphics card:** Nvidia GeForce 8800 / AMD Radeon HD 5670 or equivalent graphics cards (512 MB)
5. **Free hard drive capacity:** 12GB

RAM capacity is easy, most PCs or current laptops have the lowest RAM of 4GB. If you choose a gaming chip, please give priority to Pentium or higher. If the graphics card is a laptop, you should choose a card with a removable card. FPS will be higher than integrated VGA line.

With PC, it's always easier to build a configuration than a laptop, if you build a PC configuration, an old PC of 3-4 million is a good game for LOL and a few other games. If you buy a new one, it will be around 6-7 million to be able to play smoothly with the LMHT.
