[ProShow Producer](#) is a software that helps you can create video slideshows images effectively. The software is simple and easy to use, supports many motion effects for images and adds music to video slideshows.

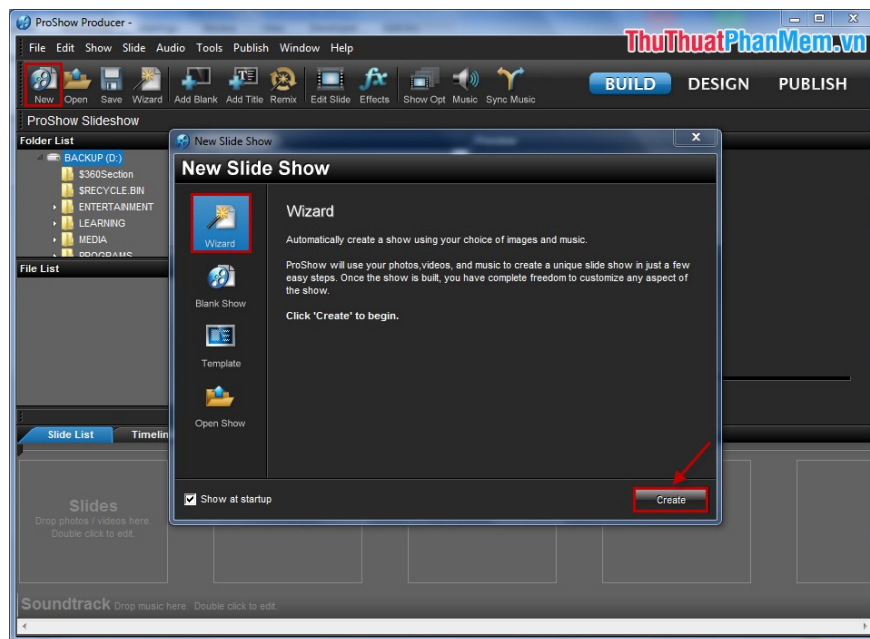

The following article will guide you how to use Proshow Producer software to create video slideshows simple images.

**Step 1:** First you need to install Proshow Producer computer. You can download the setup file and install the software into the system.

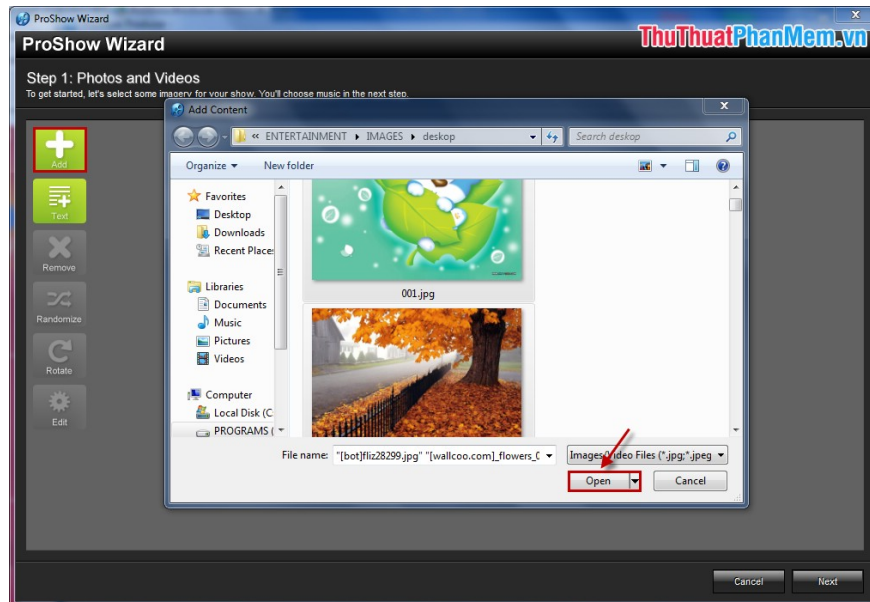

Then you open the application, below is the interface of the **ProShow Producer** application **v5.0** :

**Step 2:** You select **New** -> **Wizard** -> **Create** to start creating a new Slideshow.

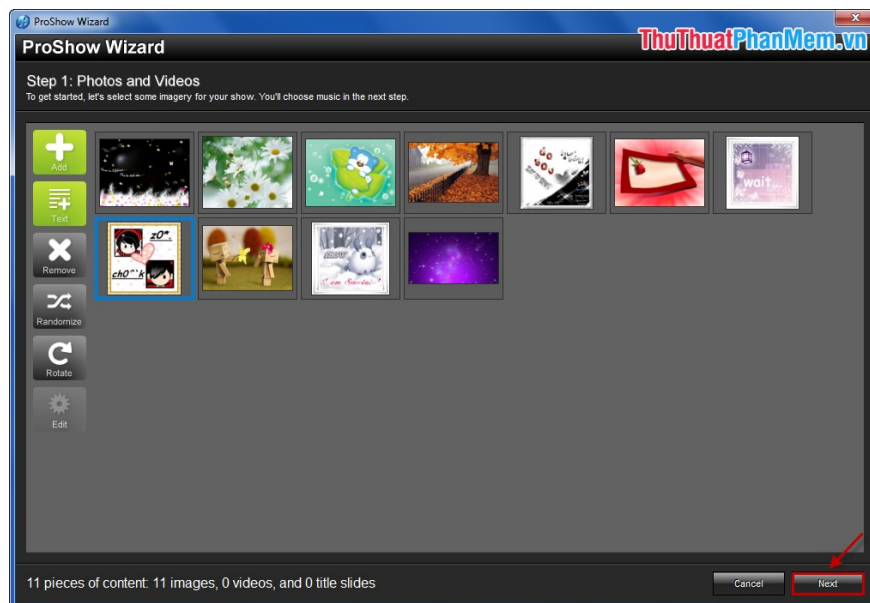

**Step 3:** Add photos to the slideshow. You click **Add** (the + symbol), then select the image on the computer you want to create the slideshow and then click **Open**.

Here you can click **Add text** to add text to the slide show and drag to the position you want.

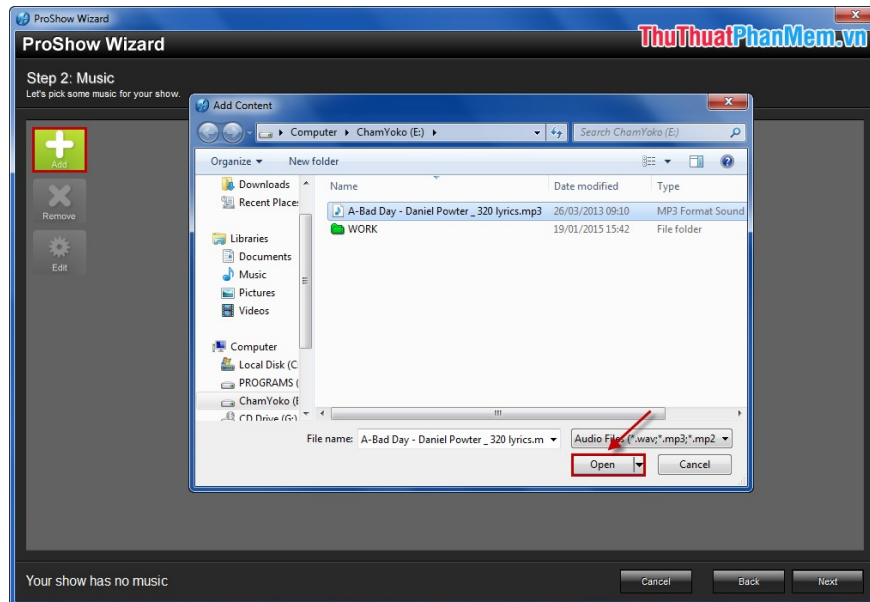

When you select an image in the list you can remove it from the list by clicking **Remove** , or to rotate the image you select **Rotate** .

After finishing adding photos you select **Next** .

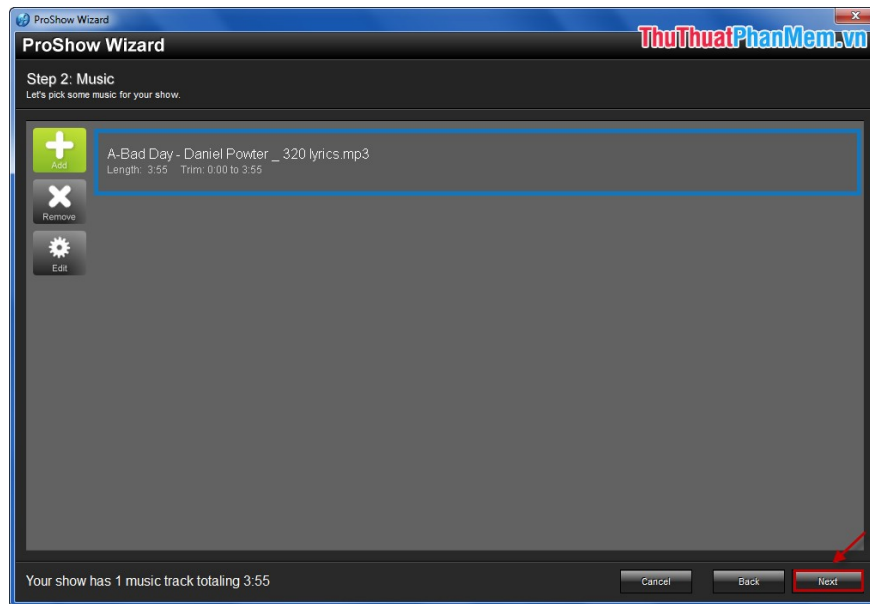

**Step 4:** Add music to the image slideshow.

Click **Add** and select the music file you want to be the background music for the slideshow and click **Open** , note the name of the music file must not be accented.

Click **Remove** if you want to delete music files, then click **Next** to continue.

**Step 5:** Next, you choose the background effect for the slideshow available in the application, the application will automatically create slideshow according to the available themes. Then click **Next** .

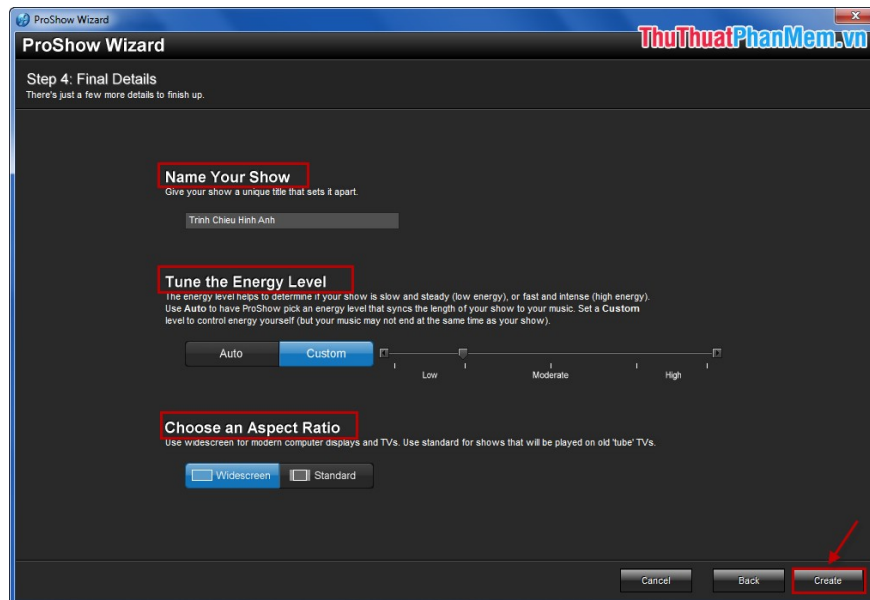

**Step 6:** In the **Final Details** section, you set up some information for the slideshow.

**Name Your Show:** Name of the slideshow.

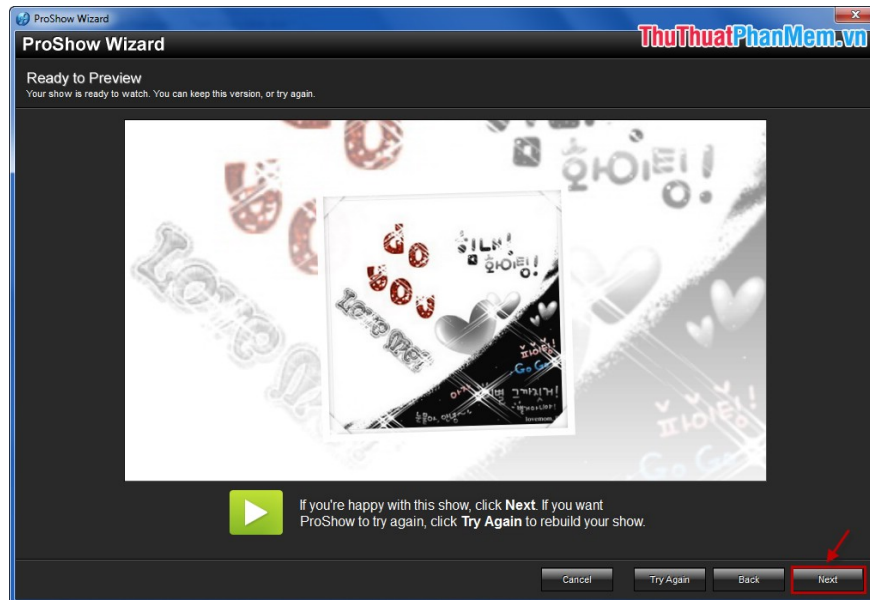

**Tune the Energy Level:** Customize the quality of the slideshow.

**Choose an Aspect Ratio:** Choose the right ratio to display the slideshow on the screen.

Then you choose **Create** to automatically create slideshow applications.

After selecting **Create** you can see your photo slideshow, then click **Next** , if you do not like you can select **Try Again** to reset.

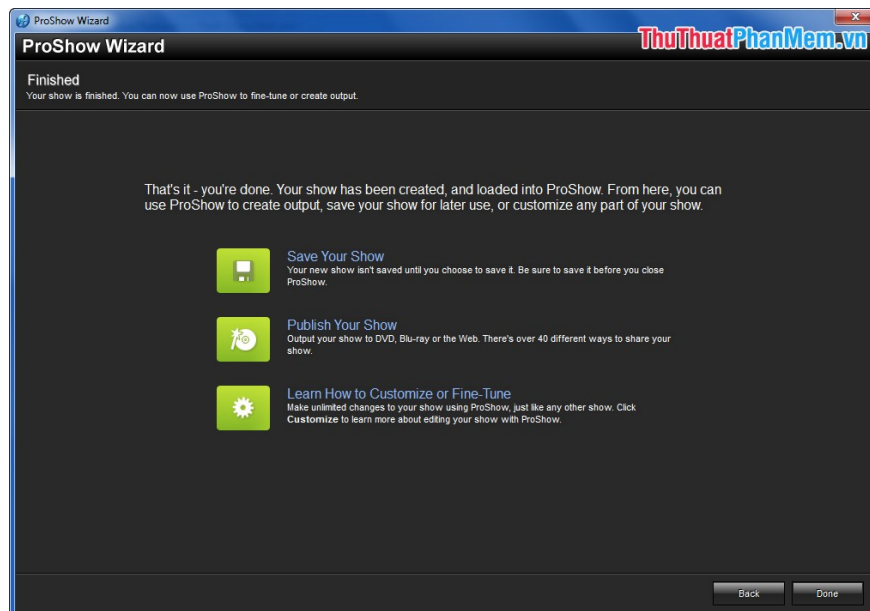

**Step 7:** Save the image slideshow.

In the **Finish** section you can choose:

- **Save Your Show:** Save the slideshow maker.
- **Publish Your Show:** Publish slideshow to video.

You can choose how to save for convenience.

Very simple, you quickly create your own video slideshows, motion effects will make you satisfied. You do not need to know too much about the software to create beautiful photo slideshows. Good luck!
