The following article, TipsMake.com would suggest a way to save water for regular hand washing, effective dry hand gel for offices and buildings. Stay tuned!

In order to protect health, prevent pathogens such as bacteria and viruses from entering the body, each person must train himself / herself to clean hand habits and proper hand washing skills.

In crowded areas such as offices, apartment buildings, commercial centers, amusement parks, management boards should prepare regular handwashing or dry hand sanitizers for everyone. used to ensure the prevention of the spread of bacteria and viruses. The following article, TipsMake.com would suggest an effective **way to save regular hand sanitizer**, effective **dry hand gel** to minimize costs for offices and buildings. Stay tuned!

Why wash hands with hand gel, dry hand gel?

One day, we will have to communicate with many people, holding many objects, so bacteria and viruses are easy to attach and stay in our hands. According to scientists' research, a hand that has been in contact with a person (especially a sick person) or an object can contain millions of bacteria and other pathogens.

Hands can unknowingly become 'medial bridges' that bring germs into our bodies through the habit of rubbing our eyes, touching our nose and mouth. Therefore, washing your hands regularly is one of the best ways to prevent the spread of diseases, especially with dangerous diseases like COVID - 19 today.

However, just washing your hands with water can not wash away the bacteria, you must wash your hands with soap, hand wash, dry hand gel containing alcohol to ensure complete destruction of the pathogen.

There have been many experiments showing the importance of hand washing with cleaning solution.

In order to prevent and protect public health in the face of complicated disease movements, management units should pay attention to a number of hand washing issues such as:

1. Soap and hand sanitizer must be fully prepared in the sink areas in office toilets and buildings.
2. Prepare disinfectant water, dry hand gel in offices, buildings; require staff and people to disinfect before and after entering crowded areas. Alcohol-based dry hand cleaners are a great 'savior' in public places, when people don't have the chance to wash their hands with soap and water.
3. Propagate and guide people to wash their hands properly according to the guidance of the Ministry of Health.

How to save water for dry hands and hand sanitizers for offices and buildings

In office buildings and buildings with a large number of people living, working, on average, the amount of hand sanitizer and hand gel for dry hands is quite large. So which solution to save hand-washing water, dry hand-washing water effectively, reduce daily expenses incurred for offices and buildings?

Buildings, hospitals, schools have started to use induction soap dispensers in place of regular containers.

Currently, there are all kinds of convenient soap dispensers on the market with a modern and sophisticated design. This is an effective solution that TipsMake.com wants to mention, let us find out how they work!

The sensor soap dispenser is basically a sanitary device with smart touch. Every time you put your hand into the sensor area, it will automatically pump out a certain amount of hand wash and then disconnect itself immediately. You absolutely do not need to perform any pressing or touching of the carrying case.

The greatest effect of the induction soap dispenser is that it helps users save the amount of hand sanitizer and avoid waste, because it only outputs a sufficient amount for each wash. Not only that, with this disease situation, they are also very effective in preventing infection when all operations are not directly in the box.

Introduce some good soap containers

The two products introduced below are both from Smartech brand - a Vietnamese brand specializing in producing smart sanitary products. Products of this brand are made by a team of Vietnamese engineers with high professional expertise in research, creation and development.

Soap dispenser ST - 1008

ST - 1008 touch soap box is made of high quality ABS plastic, non-toxic, durable. The device has two modes for users to choose from: one spray / cycle mode and two spray / cycle.

With induction mechanism, ST - 1008 will automatically spray cleaning solution (hand wash, alcohol, dry hand gel, shower gel, shampoo, .) with a volume of one discharge of 0.7ml or 1.4ml. Induction distance for the device to work well is from 3cm to 15cm.

> Product information:

1. Voltage: 6V DC equivalent to 4 AA batteries or 220V AC adapter (use only one of two power sources)
2. Capacity of solution container: 1 liter
3. Discharge capacity: 0.7ml or 1.4ml
4. Material: ABS Plastic
5. Installation form: Wall mounting
6. Reference price: VND 1,700,000

Soap dispenser ST - 1108

Soap box Smartech ST - 1108 has a slightly different design than its ST - 1008 cousin. In addition to the frame made of black ABS plastic, the box lid is also fitted with a layer of shiny silver aluminum alloy, giving it a luxurious look.

ST - 1108 still operates under the same induction mechanism as ST - 1008, only a single spray mode with a discharge capacity of 0.3ml to 0.4ml (depending on the type of solution).

> Product information:

1. Voltage: DC 6V is equivalent to 4 AA batteries
2. Capacity of solution container: 1 liter
3. Discharge capacity: 0.3ml - 0.4 ml
4. Material: ABS plastic, aluminum alloy
5. Installation form: Wall mounting
6. Reference price: 1,900,000 VND
