

Solutions to help businesses confidently delete data

Symantec, the world's leading provider of system management, storage and security solutions, has announced a new product range to help businesses optimize storage costs, manage and find effective information. the whole enterprise system

Symantec, the world's leading provider of system management, storage and security solutions, has announced a new product range to help businesses optimize storage costs, manage and find effective information. the whole enterprise system .

According to IDC, the gap between the amount of newly created digital data and the storage capacity is increasingly isolated. IDC predicts that within the next 4 years the "digital world" of information will grow by 400%, while the IT budget will only increase by 20%, and the number of additional employees will be only 10%. Therefore, if you do not manage well, eliminate duplicate information, the cost for storage will consume more and more IT budgets. Therefore, Symantec has come up with many solutions to help businesses build information classification strategies and confidently delete valuable data to increase storage resources and minimize risks instead of keeping all information forever.

Symantec Enterprise Vault 9.0 solution will provide easy policy compliance and efficient e-discovery online search engine by combining email from Microsoft Exchange online mailbox with content sources. stored in the enterprise into a central storage area. This allows organizations to reduce costs, manage centralized online search capabilities and support internal investigation activities. This version is also compatible with many different platforms such as Microsoft Exchange Server 2010 Service Pack 1 (SP1), Microsoft SharePoint Server 2010, .

Meanwhile, **Enterprise Vault Discovery Collector** technology enables organizations to easily access unmanaged information from desktops or laptops, etc. quickly processing, organizing them ready for requirements. Online access.

In addition, Symantec also announced **Symantec ApplicationHA** and **Symantec VirtualStore** solution duo to help customers be more confident when virtualizing important business applications and minimizing storage costs on VMware platform.

Based on Veritas' leading Cluster Server (clustered server) technology, ApplicationHA solution will provide high availability for critical enterprise applications through application coverage and application control. VMware environment.

Meanwhile, VirtualStore is built on Veritas Storage Foundation technology (storage platform) to help quickly provide servers and virtual computers, while helping to effectively backup and speed up the boot process of the machine. virtual. Both ApplicationHA and VirtualStore are seamlessly integrated with other VMware management tools such as VMware vCenter Server, allowing customers to deploy these tools without affecting their operating model.
