TipsMake.com - Since Windows 7 was born, there have been many articles exploiting the basic and advanced features of this operating system, go region with the utilities, tips to optimize the system. system. One of those things is to take advantage of shortcuts - to increase the time savings and increase user productivity. In the lower part of the article, we will introduce you some useful shortcuts for Windows 7.

1. Ctrl + Shift + N: create a new folder:

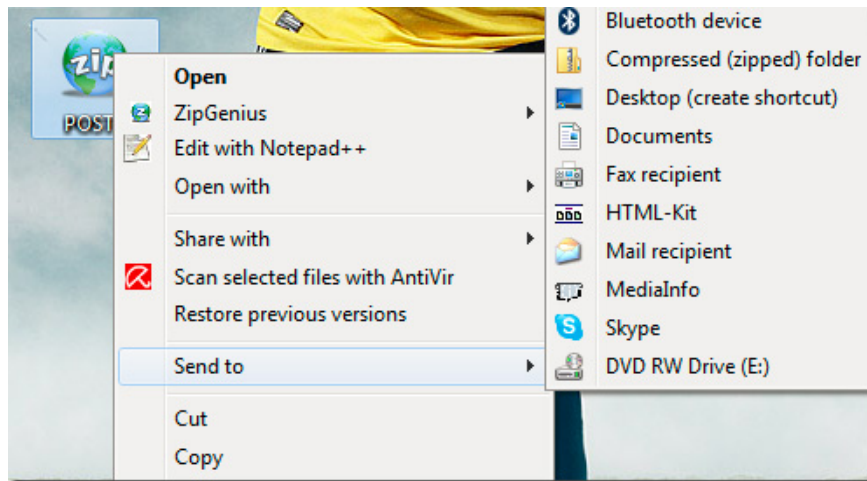

No need to right click, select **New > Folder** as usual, just combine **Ctrl + Shift + N** and we have a new folder in the open window.

2. Ctrl + Shift + Click: Open any program by Administrator:

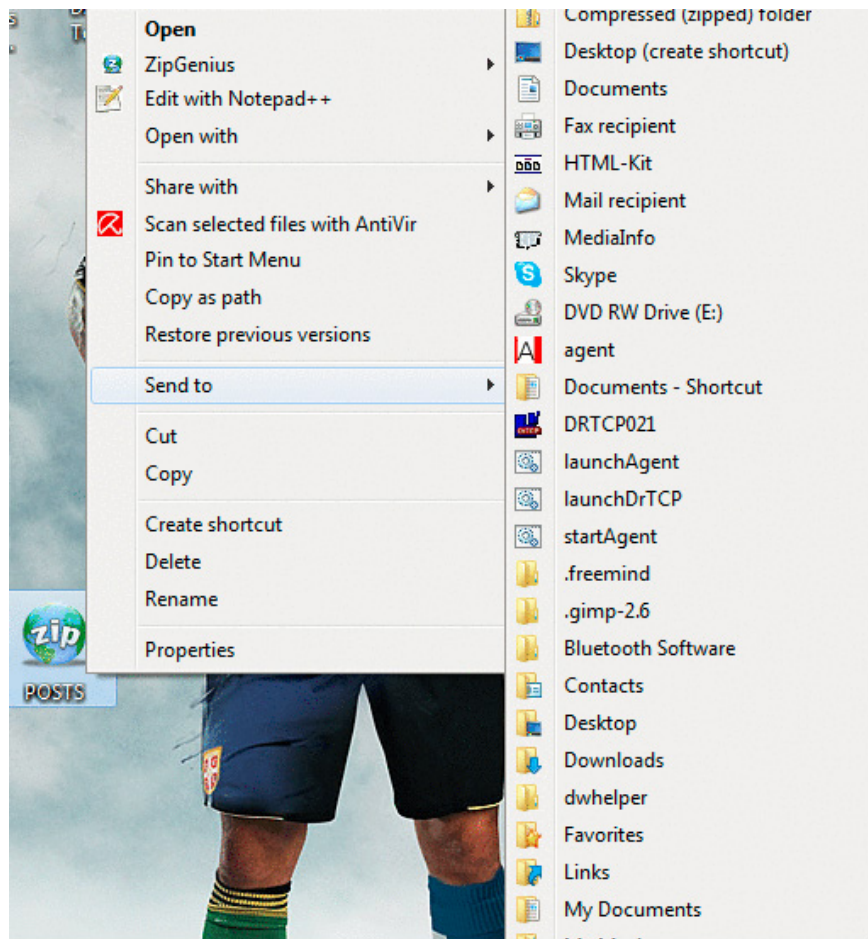

In many special cases, you cannot use the program in the normal way but right-click and select **Run as Administrator** . In Windows 7, just hold **Ctrl + Shift** and open the application as usual.

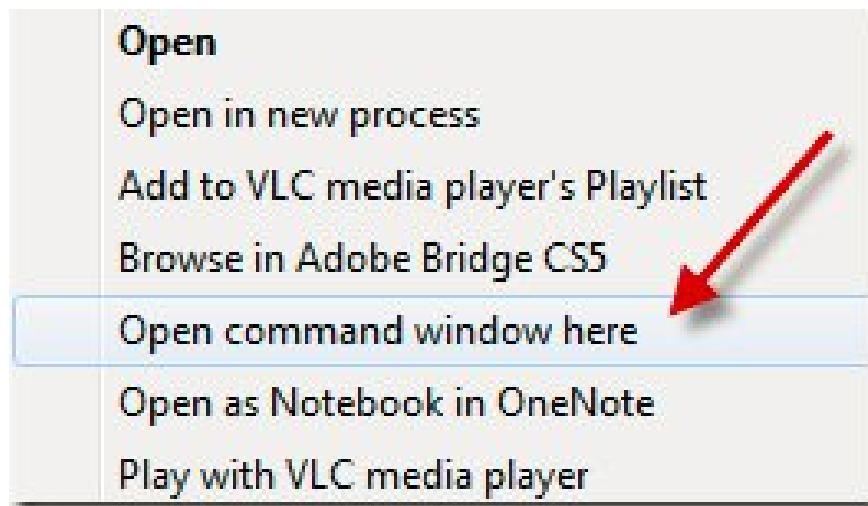

3. Shift + right mouse: add Context Menu features:

We will see a clear difference when viewing the top and bottom images, the right-click menu will change when holding the **Shift** key:

4. Shift + right click on the folder to open the Command Prompt:

When holding Shift and right clicking on any folder, we will have the option **Open command windows here** , and the **Command Prompt** will be opened at the current path.

5. Windows + Space to display Desktop.

6. Windows + arrow keys to change the status of the windows:

When combining the Windows key and the arrow keys, the system will move the open window in the corresponding direction (left, right), or resize it (**Maximize state** , **Restore** or **Minimize**).

7. With Dual Monitor system: Windows + Shift + left (right) arrow key to move the window to the left (right):

In Windows 7, when setting up and using Dual Monitor mode, press the Windows key combination + Shift + left arrow - right, the system will combine and move the working windows and programs to the screen. left or right.

8. Windows + T: switch between components under the Taskbar:

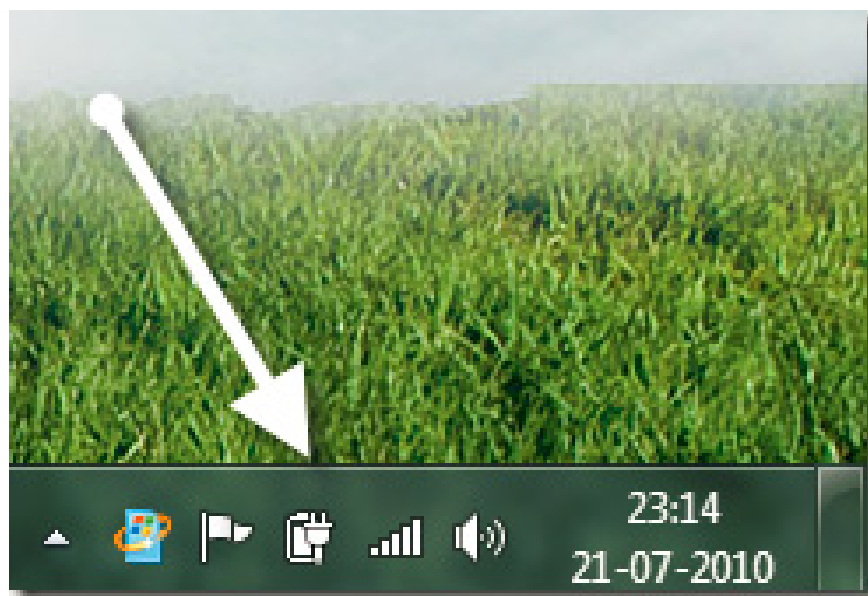

Very simple and easy, when you want to switch between components (active or inactive) under the Taskbar, you just need to press **Windows + T** key, different from **Alt + Tab**, this function only changes between doors. windows, programs are open.

9. Shift + opens the app at Taskbar:

Assume that you are opening a lot of Chrome windows, and when you need to open a completely new browser window, point your mouse at the Chrome icon in the Taskbar, hold Shift and click.

10. Windows + B: select components under System Tray:

When you want to quickly open applications, components in the System Tray, we just need to press Windows + B to change from the first program from left to right.

11. Windows + P: Laptop connection to the projector:

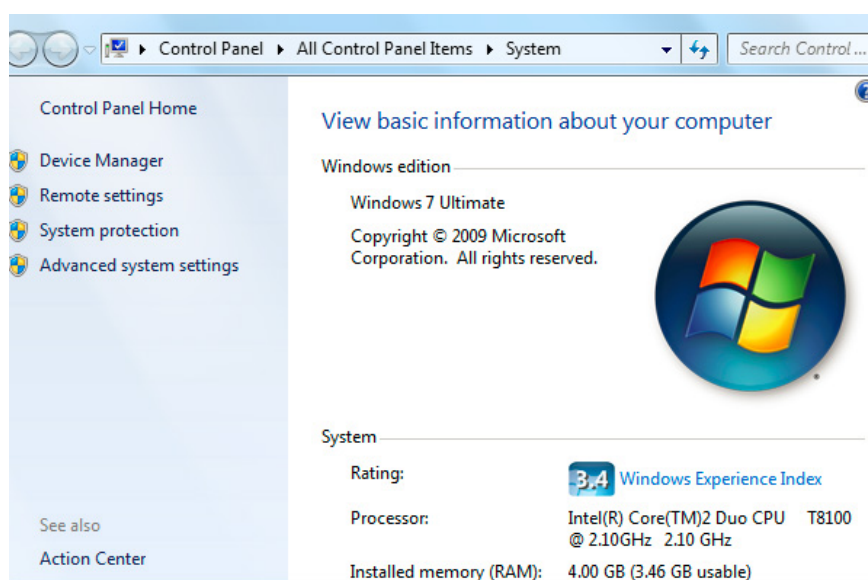

Technically, Windows 7 has built-in features that are quite handy when users want to connect a projector or a monitor other than a laptop via Windows + P. shortcut.

12. Windows + 1, 2, 3 .: to open the program on the Taskbar:

When you want to open any application that has been mounted on the Windows 7 Taskbar, you just need to press Windows and the number corresponding to the location of the program.

13. Windows + Pause: check System Properties:

If you want to quickly know information about hardware, operating system, Device Manager, Advance System Settings . in Windows 7, press the Windows key combination + Pause to display the System Properties panel.

14. Ctrl + Shift + Esc: open Windows Task Manager:

In fact, this feature is available from the Windows Vista version, next to the familiar **Ctrl + Alt + Delete** shortcut, when pressing **Ctrl + Shift + Esc**, the system will quickly display the **Task Manager** window .
