## 1. Gliffy.com

Let's start with the most powerful and flexible program today, it's Gliffy. Users can apply existing template sets or create new files based entirely on demand. So what kind of charts can we create with **Gliffy** ? The interface interacts with users of the Website or software, Venn diagram, organizational chart, diagram, network system, UML chart . in short, it is very much and varied. And for each type of chart there are many different templates, so the choice of users will not be limited:

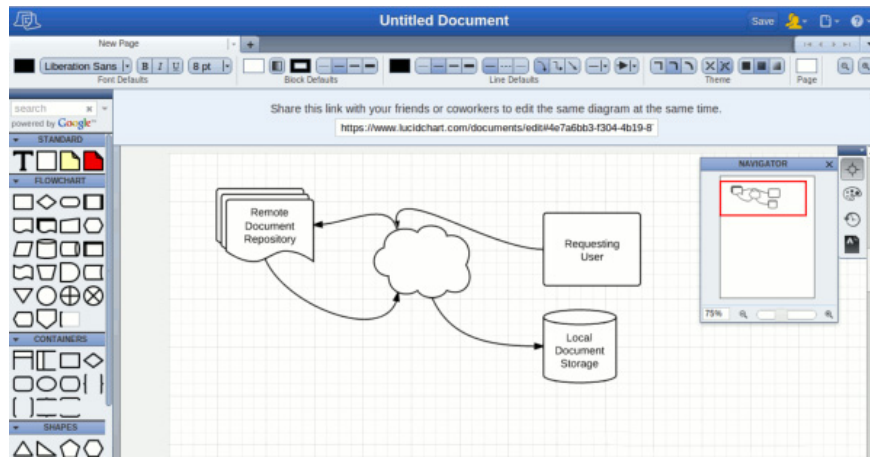

The interface of the application works by dragging and dropping the corresponding objects, and if you want to use the chart with some other document documents, it can be extracted into **PNG, JPEG, or SVG format**. However, one point to note is that you can only use the first 5 charts for free, and then you want to continue to pay for it.
