Useful tips will help you get the most out of the Samsung Galaxy S7 features, making it easier to master the device. In the previous section, Network Administrator introduced you to the procedure of customizing the screen, installing the application . In the next part, Network Administrator will introduce you to some tips about Camera, extend the age. Battery life .

## Part 3: Camera tricks

### 1. How to launch Camera quickly?

Samsung's quick launch feature allows you to press the **Home** button twice to open the Camera, even if the S7 screen is off or the phone is locked.

However by default, this feature is disabled, so you need to enable the feature. Open the Camera app and then click the jagged icon to access the Camera settings, then switch the **Quick Launch** option to ON.

## 2. Screen capture S7

Galaxy S7 phone screen capture is quite simple, just press and hold the Power button and the Home button simultaneously.

Also you can set the screen capture feature by swiping the screen edge. However, this feature is disabled, so you must enable this feature by going to **Settings => Advanced features => Palm swipe to capture** .

Also in the Advanced features options menu, check the **Smart capture section** . Enable this feature every time you take a screenshot, you will see a popup icon appear at the bottom of the screen.

The + sign icon allows you to take more screen shots by just scrolling down. Share icon allows you to share photos via Email or any other application. Crop button allows you to adjust, crop image size and save in photo library.

By default, Galaxy S7 screenshots are saved in the folder Screenshots in the photo library.

## 3. Take better selfie photos

Take a selfie photo on S7 by selecting the Camera first, then press **Mode => Wide selfie** .

## 4. Take photos and record videos with hands-free mode (hands-free)

Open the Camera app and then click the jagged icon to access Camera Settings. Here you will find the Voice control option, which allows you to take photos by saying Smile, Cheese, Capture, or Shoot.

## 5. How to take better pictures?

Open the Camera app and then click Mode and select **Pro** . Now you can change ISO settings, white balance, lens opening .

Auto mode is generally quite useful, but many users prefer to evaluate more fine tuning.

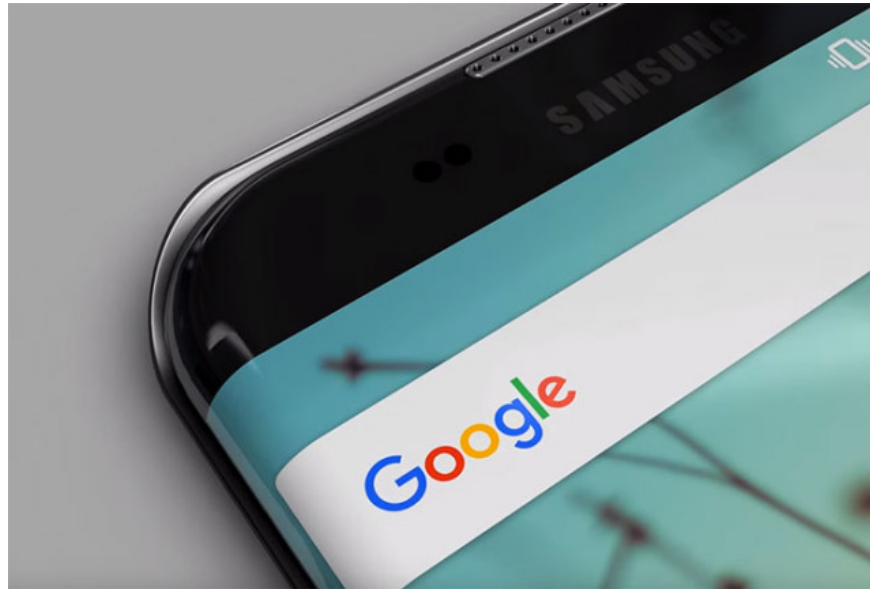

# Part 4: Memory, Battery life .

## 1. Free memory

You can check the S7 memory by going to Settings, selecting Storage then clicking **Explore** at the bottom to check the file size, managing and deleting unnecessary files.

S7 supports MicroSD memory card up to 200 GB. By default, applications are installed on internal memory. However, you can access **Settings** (settings) => **Applications** (application) => **Application manager** ( **application manager** ) and then click on any application you have installed, then click **Storage => Change** . You will find the option to change the application storage location to SD card.

To save the image on S7 to MicroSD card, open the Camera application then click the jagged icon to open Camera Settings => Storage location and select the SD card to finish.

## 2. Extend battery life

When you go to **Settings** (> settings) => **Battery** (battery), on the screen you will see a list of analyzing applications and services (services) on how much "battery" device.

The Galaxy S7 has 2 modes to help you save battery, the basic mode is **Power saving mode** or you can use **Ultra power saving mode** , this mode will cut the function and S7 performance in case of emergency. level.

In addition, S7 also includes a special battery saving option for gamers, reducing performance when touching the screen to save battery.

You can open this feature by going to **Game Launcher** => **Game Tools**.

## 3. How to use the Now on Tap feature?

Now on Tap feature of Google allows you to scan a page and find more information.

All you need is to press the **Home** button , then press **G** at the bottom of the screen to launch Google Now.

## 4. Use Smart Lock

**Go to Settings** => **Lock screen and security** => **Secure lock settings** => **Smart Lock** and set up trusted device, trusted location .

## 5. Receive and end the call

Usually you can answer incoming calls and outgoing calls by adjusting on the open screen. However, you can set up using the Home button to answer the incoming call and press the Power button to end the call.

**Go to Settings** => **Accessibility**> **Answering and ending calls** and switch the option to **ON** .
