

# Sony expanded its memory card product line with Cfast

Cfast becomes a new line of high-tech memory cards that Samsung has just announced.

Specifically, with the strategy to expand the dedicated memory card product line, Sony has launched a high-performance CFast memory card for photographers and videographers.

G-card CFast 2.0 series is available in 32GB (CAT-G32), 64GB (CAT-G64) and 128GB (CAT-G128).

The cards, available at all Alpha Flagship stores, Sony Center and large electronics stores, offer write speeds of up to 510MB / s and read speeds of up to 530MB / s.

With write speeds of up to 510MB / sec, this write speed outperforms the capabilities of existing CFast cards, Sony's G Series supports high resolution RAW shooting, maximizing the capabilities of DSLR cameras. high class.

With fast read speeds of 530MB / s, Sony's G Series CFast memory card reduces the time it takes to move RAW files, long 4K video and high-resolution images to desktops, or laptops.

With Video Performance Guarantee 130 (VPG-130) support, this new memory card line enables video recording in 4K resolution or cinematic video with high quality and high capacity.

This new memory card has undergone vibration, drop, shock, hardness tests, and operates on a variety of temperatures and has high antistatic ability.
