

# Sony launched the SF-G Touch, the fastest and most durable SD memory card on the market

The SF-G Touch has a bending resistance of up to 180 Newtons, while conventional SD card models only withstand the impact force of about 10 Newtons.

Sony has just released the UHS-II durable SD card with the name SF-G Touch. This is a memory card classified as 'video speed class' (new speed standard exclusively for video recording) is V90 (reading 300 MB / s and recording 299 MB / s). SF-G Touch is suitable for high-speed shooting as well as 4K movie shooting.

The SF-G Touch has a bending resistance of up to 180 Newtons, while conventional SD card models only withstand the impact force of about 10 Newtons. In addition, the SF-G Touch can also prevent falling to a height of up to 5 meters and IP68 standard (water resistance at a depth of 5 meters in 72 hours).

Please watch Sony SF-G Touch's video of endurance testing against conventional SD card.

File Rescue Software, file recovery software and SD Scan Utility, Sony's memory card checking and alerting software is also available on SF-G Touch.

Sony is expected to officially launch SF-G Touch in October. SF-G Touch includes the following power levels: 32 GB (73 USD), 64 GB (132 USD) and 128 GB (276 USD).

Earlier in 2016, Sony also released a series of SD SF memory cards that can withstand bending up to 50 Newtons.
