

Sony launches 4K vlogging camera, with live streaming via 5GHz Wi-Fi network

The ZV-E10 II's internal hardware is upgraded over the previous generation with a 26 megapixel (MP) Exmor R CMOS sensor and BIONZ XR image processor.

Sony has just launched the ZV-E10 II, the second generation of the ZV-E10 vlogging camera series. The ZV-E10 II retains the original vlogging features, such as Product Showcase, Background Defocus, Soft Skin Effect, wireless livestreaming, and a multi-angle flip screen, and continues to improve its features and convenience.

ZV-E10 II camera.

The ZV-E10 II's internal hardware is upgraded from the previous generation with a 26 megapixel (MP) Exmor R CMOS sensor and Sony's BIONZ XR image processor. Other improvements include upgraded autofocus and video recording systems, Creative Look (in-camera presets), Cinematic Vlog settings, a vertical control interface, a high-capacity Z-series battery, and more.

With 4K 60p recording at Full HD 120p resolution in clear XAVC-S quality, users can capture moving moments using S&Q mode with 5x slow motion effect (when playing back at 24p). Product Showcase feature helps to record product videos by switching focus from face to product.

Along with that, the Background Defocus feature adjusts the depth of field and creates background bokeh with just one touch. Or the Face Priority Auto-Exposure feature immediately recognizes faces and optimally measures

the exposure for faces, even when shooting in a constantly changing lighting environment. And Soft Skin Effect helps smooth and reduce imperfections on the subject's skin.

Users can easily connect the camera to other devices via the USB 3.2 Type-C port (SuperSpeed USB 5Gbps), or transfer wired to a compatible smartphone or PC via the Creator App. In particular, the product also supports livestreaming via 5GHz Wi-Fi connection.

The Sony ZV-E10 II vlog camera has a reference price of 26.99 million VND (body only), or a combo with the E PZ 16-50mm F3.5-5.6 OSS II kit lens for 29.99 million VND.
