

# Speed ??up download - upload BitTorrent

We are familiar with download support software to speed up file downloads. However, the download acceleration software according to the BitTorrent protocol must not be well known. FeyAccelerator is one of them.

**We are familiar with download support software to speed up file downloads. However, the download acceleration software according to the BitTorrent protocol must not be well known. FeyAccelerator is one of them.**

BitTorrent is a Peer to Peer (P2P) data sharing protocol, whereby users have downloaded and uploaded the downloaded data to share to users around the world. The more people join the peer network, the better the download rate and the faster the download speed. With this method, data can be shared without relying on servers to store and store data.

BitTorrent is a popular way of sharing data, accounting for 35% of the total share on the Internet. You can download images, documents, ebooks, music, movies . by using this peer-to-peer network.

Download speed according to BitTorrent protocol depends on the number of people uploading (aka seeder). The more seeders, the faster the download speed. However, sometimes, the number of seeders is large but still does not achieve the optimal download speed.

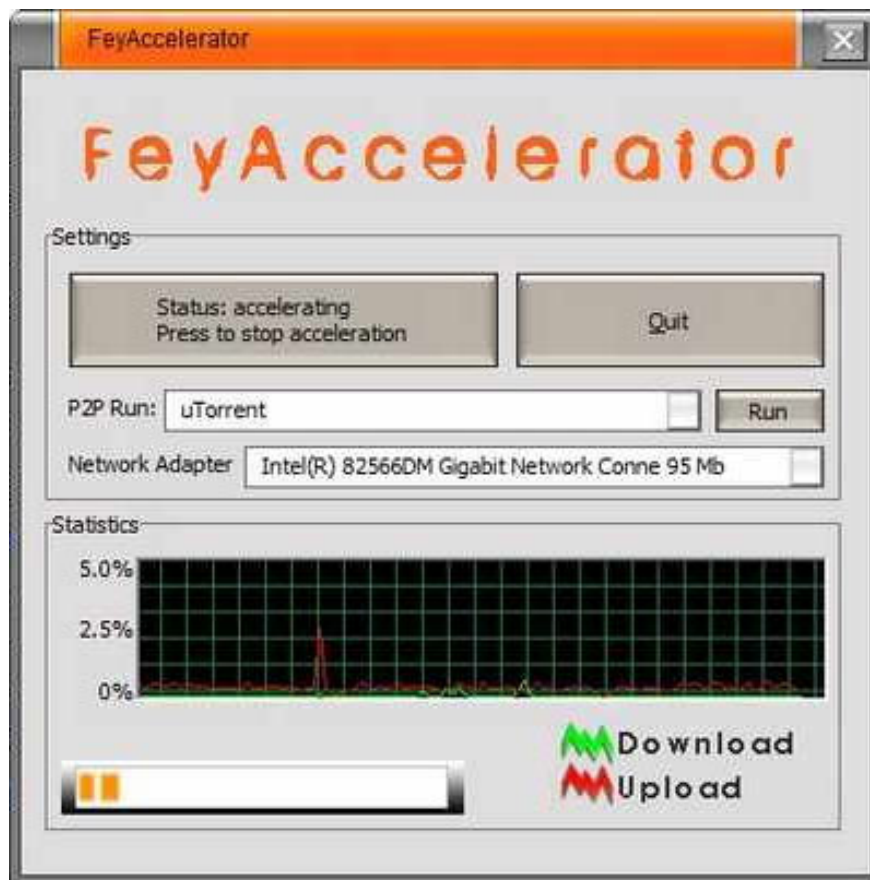

FeyAcclerator is a free software, optimized for Windows, software for downloading Torrent and Internet connection, which speeds up downloads with the BitTorrent protocol.

Simple, easy to use, small and light with no resources when used are FeyAccelerator's advantages.

Download the software here.

*Note : FeyAccelerator is compatible with most BitTorrent downloaders today, but to get the maximum effect, you should use uTorrent software. (Download for free here).*

After downloading and installing, activate to use FeyAccelerator.

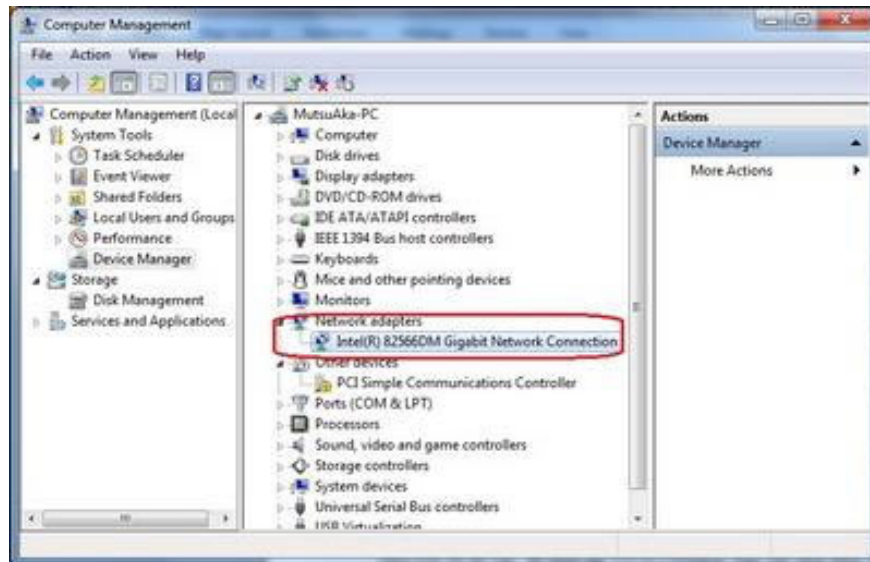

- At the main interface of the software, at P2P Run, click to select the BitTorrent downloader software installed on the system.
- In the **Network Adapter** section below, select the type of network card that the system is using. (The way to view network card information is shown below.)
- If the BitTorrent download software on the system has not been activated, click the **Run** button in the **P2P Run** section to activate it.
- Now, the software will automatically optimize the protocol and Windows so that the BitTorrent download software always gets the best download / upload speed.

#### **Instructions for finding information about network cards in use:**

As mentioned above, to set up FeyAccelerator, you need to declare the network card information that the system is using. To find this information, follow these steps:

- Right-click **My Computer** icon, select **Manager** .
- In the **Computer Management** dialog box, select **Device Manager** .
- From the list of device information on the system appears in the left panel, go to **Network Adapters** . Here shows information about the network card that your system is using.

Use this information to report to FeyAccelerator for accuracy, making the software more stable and efficient.
