

# Spell Maste AR, an interesting Japanese language learning app that allows you to display objects like magic

Katakoto, a Japanese technology company, has developed the Maste AR Spell language learning application, allowing users to consult a visual example of a certain word via smartphone.

Katakoto, a Japanese technology company, has developed the Maste AR Spell language learning application, allowing users to consult a visual example of a certain word via smartphone. For example, when checking from Apple, an apple will appear in the middle of the magic circle. This helps learners remember more easily and arouses passion and excitement when learning a foreign language.

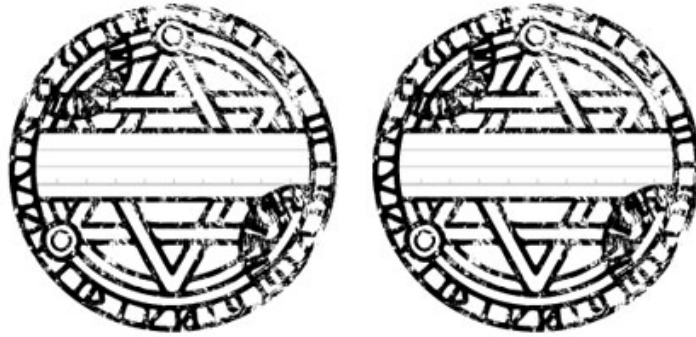

With the Spell Maste AR application, any user can become a 'witch' language.

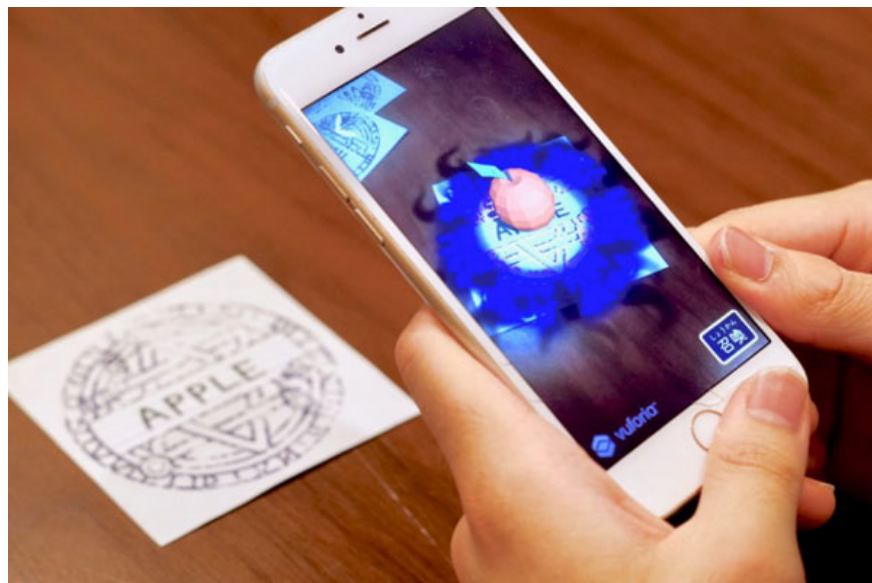

Put the Spell Maste on "Apple" immediately to the apple.

To be able to "enable" as above, users only need to download the Spell Master AR application, print out the card for this application here and follow the instructions in the video below.

Katakoto has not revealed the number of words that their system can recognize but in the video above, we can see that Spell Master AR not only "spells" the apple, the Earth but the basic words like All pencils, cameras, computers are included. With emotive adjectives such as joy and sadness . the system displays emoji-like emoticons.

Spell Master AR also has a database to recognize kanji, hiragana, katakana and display results similar to English, making learning Japanese easier.

It is an interesting language learning app but unfortunately, Spell Master AR has not officially launched yet. However, Katakoto said Spell Master AR will be downloaded for free for both iOS and Android.
