

# Spyier Review: How to Track Someone's iPhone for Free

Are you interested in tracking someone's iPhone for free? Spyier will do an excellent job for you. No jailbreaking and installation needed. Use the iCloud ID of the targeted iPhone on Spyier's main website.

Your kid or spouse can lose their iPhone in their day to day activities. There are many thieves in the streets nowadays. You might also want to know the precise location of the iPhone to keep tabs on the person.

The reasons are endless. Tracking their iPhone can help you know their moves. Most probably, they have their phone all the time. It's an excellent way to know what they are up to since the phone has many uses.

So far, many apps claim to track an iPhone. But unfortunately, most of them cannot do the work for you for free while remaining undetectable.

## Part 1: Track Someone's iPhone For Free With Spyier

Spyier is the best solution for you to track an iPhone for free. It is the world's most preferred tracking solution, with more than 30 features in it. Millions of people across the globe are already using it.

CNET and Android Authority have featured it in their headlines because of this reason. Spyier does not need any jailbreaking tricks to use it due to its unique cutting edge technologies. Therefore, you do not need to alter the iPhone to track it.

### Picture 1 of Spyier Review: How to Track Someone's iPhone for Free

Through Spyier, you will see the exact location of the iPhone and the previously visited places. You can also use the Geofencing feature to impose restrictions. Once your target goes beyond the restricted zones, you will receive an alert in your email.

You get to access all this information for free. Spyier allows you to track the phone using its in-built GPS or the connected Wi-Fi. After every few minutes, you will be receiving updates in your online account.

Spyier is compatible with iOS version 7.0 or later. You only need the target's iCloud ID to start tracking. Once you have that, you are all set. For more information, you can learn how to track someone's iPhone with Spyier on the main website.

What you need to be sure of is that the iCloud syncing is turned on. Also, two-step verification should be turned off. After that, you can go ahead and verify the target's iCloud ID on Spyier's main website.

It does not need any download or installation when tracking. When you get back to your online account, you will find all the data. It will be well presented on a user-friendly web-based dashboard.

Spyier is compatible with all browsers. You can, therefore, use a laptop, tablet, or any device to track the iPhone. Make sure you have an internet connection and an updated browser.

The data you track is safe from unauthorized access. This is because Spyier does not store the data in its cloud. It uses it solely for getting the data and delivering it to your online account's dashboard. It's only you who can see the tracking information when you log in.

## **Part 2: How to Start Tracking Someone's iPhone Using Spyier**

### **Requirements**

1. The Apple device should be 7.0 or later. Get the iCloud ID
2. Reliable internet connection
3. An authentic email address

### **Steps to Start Tracking**

Step 1: Visit Spyier's official website and register for a free account using a working email address and a password. After, purchase a plan that is suitable for your tracking agenda.

Step 2: Check your email for the setup instructions, log in details, and the receipt after the payment.

Step 3: After the email, log into your Spyier account remotely and verify the target's iCloud ID. Then, select the gadget the culprit is using. Allow the app to sync all the data. This will take some time.

Step 4: Once the data is synced, go to the control panel to see the features and the phone's summary.

To track the iPhone, click on 'Location' to see the real-time location of the iPhone and previously visited places.

If you want to impose restrictions, use the Geofencing feature.

## **Part 3: Advantages of Using Spyier to Track an iPhone**

There are several advantages to choosing Spyier over other tracking apps. Let us go through them below:

1. There is no download or installation: Spyier does not require to be installed on the targeted phone. All you require are the iCloud credentials of their iPhone.
2. Little or no battery drain: Your target will not be wondering why their battery is draining so fast. So, Spyier does not raise any suspicions.
3. No jailbreaking: You do not need to alter the target's device OS to start tracking.
4. Real-time updates: Every few minutes, you will be able to see an updated location of their phone. You can also set up Geofencing zones to know if they have gone past the restricted zones.

5. Quick setup: It will take you less than 5 minutes to start the tracking.
6. Remote un-installation: You can remotely uninstall Spyier through your online account.
7. Good customer support: At any time you try to reach the support team, they are available 24/7.
8. It has more than 30 features: You have unlimited access to the features one you get your monthly package. That means there will be more than tracking the iPhone.
9. Reliability: Because Spyier does not need any installation, it will work silently in the background. The target will not find out about your tracking motives.

## Conclusion

That is how to use Spyier to track someone's iPhone. You will get real-time updates in your online account. It will get you the precise location of the iPhone and previously visited places. Many people prefer using it because of its reliability and calm nature.

The target never finds out about it since it does not need any installation. There will be no icon on the app's display. So, proceed to sign up for an account for free. Once you acquire it, the tracking will be unlimited.
