

Standard color encoding for programmers and designers

Owning standard CSS color coding, you will be more confident when designing, web programming, because color is an indispensable part in the Internet world. These are standard RGB color codes, you can memorize or save to copy when needed!

Owning standard CSS color coding, you will be more confident when designing, web programming, because color is an indispensable part in the Internet world. These are standard RGB color codes, you can memorize or save to copy when needed!

According to Wikipedia, the RGB color model uses an additional model in which red, green and blue light is combined together in many different ways to form other colors. The acronym RGB in English means red (red), green (green) and blue (blue), which are the three original colors in additional light models.

Also note that the RGB color model itself does not define exactly "red", "green" and "blue", so with the same values of RGB can be tissue describe the different colors on different devices with the same color model. While they share a common color model, their true color space is significantly oscillating.

Hex color system is a variation of RGB, using 16bit mechanism and is started by # sign instead of 0 to 225 numbers like RGB.
