

Start your computer quickly by turning off the App that starts with Win

Usually a lot of software you install by default will start with Windows. The computer boots up long and also causes problems with low-profile machines.

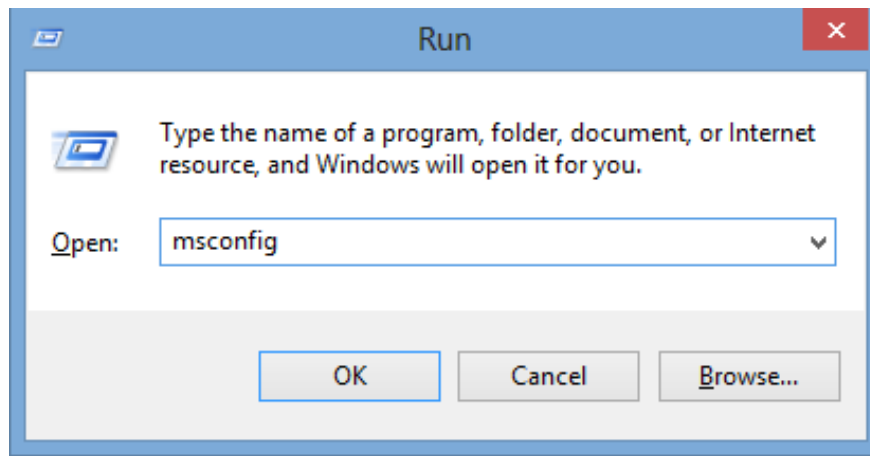

Usually a lot of software you install by default will start with Windows. Therefore, when turning on the computer, it will take a lot of time to boot, long and sometimes cause the machine with low configuration.

However, the fact is that not the applications, the software will default to start with Win that you will use often, always need to turn on. Therefore, **to make the computer boot faster**, turning off some unnecessary applications when starting the computer.

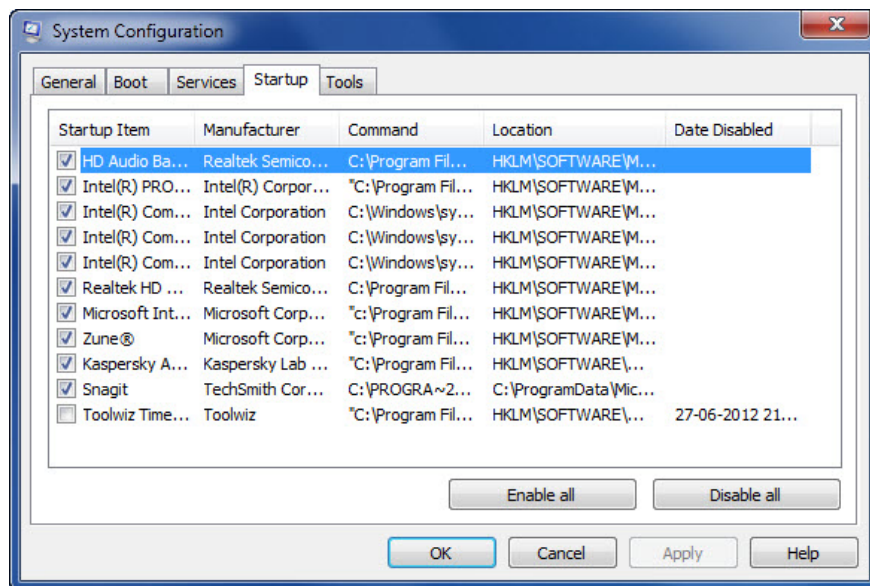

How to turn off the Start application that starts with Windows

To turn off these applications follow these steps:

Step 1: Click on the keyboard combination **Windows + R**. Type in the window on **msconfig** then click the **OK** button. You will see them displayed as follows:

Step 2: The **System Configuration** installation interface appears, select to **Startup** Tab . Illustration:

Step 3: After selecting unnecessary applications to start immediately after turning on the device. For example: Skype, Yahoo, anti-virus software, or some other messy software.

Note: Do not turn off something related to Toupad of Laptop or Unikey!

Step 4: Click **OK** . The device will then ask for a reboot. You agree then click **Ok** , the machine will reboot and will see the results!

The above is a very simple way, but it means a lot to the machine configuration is not high. By slow boot time is also very inhibiting! To boot and run faster, **you should remove strange applications, installed underground on your device!** These are very common, you install a software, but after continuing to Next, you will not notice it will be easy to install strange software. I will talk about them in the following articles.

Good luck!
