With the rapid development of technology, in the next 8 years, many modern technologies will appear and become popular in the daily life of people like microwave ovens like cooks, fire robots, Unmanned cars and trains or surgical robots .

1. Technology can help people with supernatural abilities "read thoughts, telepathy"?
2. Successful genetic modification helps people not to be afraid of disease
3. 26 photos of life filled with future Japanese technology

In 2025, the number of medical staff in hospitals will be much lower than today. Because then, robots will be popularly used to conduct health checks and treat patients. Ian Pearson, a technology expert and futurist, said that many robots are currently involved in surgery for patients, but they are often controlled remotely by skilled doctors. In the future, some modern robots have the ability to operate on their own, without the help of doctors, but still bring high efficiency. (Photo: Accuray.)

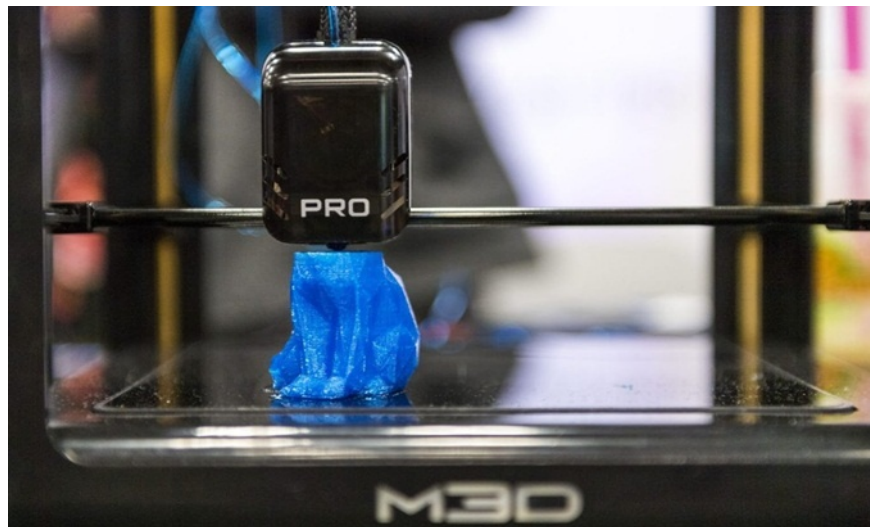

In the future, police and soldiers can use intelligent reconnaissance drones and self-driving tanks. Meanwhile, robots will also participate in fire operations. By using infrared video cameras, they will not be affected by heat and smoke. (Photo: Sun.)

Currently, unmanned cars and trains are now a reality. Pearson believes that aircraft without pilot control, self-driving trucks and buses will also appear and operate in 2025. (Photo: Sun.)

Pearson said, by 2025, people will be freed from cleaning and cooking. At that time, you just need to put ingredients into the microwave oven or 3D food printer, they will prepare and cook the whole meal. In the late 2020s, the cleanup and simple work in the kitchen will be undertaken by family robots. (Photo: Handout.)

According to Pearson, in 2025, tiled robots can order thousands of bricks per hour, new 3D printers are capable of creating the whole house in just a few hours. (Photo: Sun.)

In 2025, virtual reality entertainment (VR) technology will appear in most families. Then, the first smartphone device directly attached to the skin to monitor user health, communication via brainwaves will appear. Photo: Sun.
