

Startled with the hypotheses about the number of universes co-existed by scientists

You will be surprised to learn that some physicists predict that countless universes are really very similar to our world and will also include many of your copies.

For a long time, physicists have proposed many theories about the universes that coexist in parallel, forming a vast multiverse, but proving it to be true is not simple. Here are the assumptions about the number of universes coexisting, you will be surprised to learn that some physicists predict that countless universes are really very similar to our world and will also cover Include multiple copies of you.

1. Detecting the shock of the "twin brothers" of the solar system, the key to deciphering early life
2. NASA announces a place that can survive life right in our solar system
