  5. 5. Hitachi Inverter vertical washer

## I. The life-long habits of washing machines you should know

1. Wash too much clothes at once

Washing too much clothes at the same time, exceeding the capacity of the washing machine is one of the causes of wear on the belt system and bearings of the machine. Therefore, check carefully and make sure the weight of laundry is appropriate to the capacity of the machine. This not only helps clothes to be cleaner but also ensures durability for the machine.

## **2. Washing too much detergent**

Many people think that the more laundry detergent is used, the cleaner the clothes will be. However, this concept is quite wrong, because washing a lot of washing powder will leave a large amount of soap residue on clothes and washing machine. This makes cleaning difficult and greatly affects the machine's control panel. In fact, it is not merely that the big laundry detergent launches detergent and detergent for washing machines. Choose the right washing powder with sufficient amount to protect the washing machine.

## **3. Plug in the power too long**

There is a special feature in the washing machine that you should not leave the power plug on all day, even if the machine is not working. When plugged in, the current may suddenly increase, causing serious damage to the electrical circuits and may melt the plastic components containing the microprocessor. If this problem occurs, you will have to call a mechanic and lose a significant amount of money for repairs. It is best to unplug or disconnect the washing machine's power when not in use.

## **4. Bra keychains**

If anyone is in the habit of washing underwear with clothes every day by washing machine, change it immediately. Because bras, especially steel-rimmed shirts when moving in the washing machine, can scratch and damage the washing bucket. You should wash your underwear or use a laundry bag to help protect the washing machine.

## **5. Suddenly open the washing machine lid**

Do not open the washing machine cover while the machine is operating. This seems to be harmless but can accidentally cause the washing process to be interrupted, the spindle in the washing bucket is skewed. To ensure safety for the device, remember to press the Pause button and then open the lid.

## **6. Zipper lock shirt, pants**

Clothes with hooks, buttons or zippers are easily caught in the holes inside the washing bucket, and cause serious scratches on the door (for front-loading washing machines). These scratches not only lose aesthetics but also cause the risk of glass explosion during use. The simple way is that you need to pull all the keys, close all the buttons to use the machine more safely.

# **II. Top washing machines are recommended by experts today**

## **1. Drying machine Inverter Electrolux 10 kg EWW14023 - Reference price: VND 15,390,000**
