

# Steps to adjust mouse speed on Windows 11

Adjusting mouse speed on Windows 11 will help you use the mouse more effectively when operating on the computer. For Windows 11, we have a lot of different ways to quickly adjust the mouse speed.

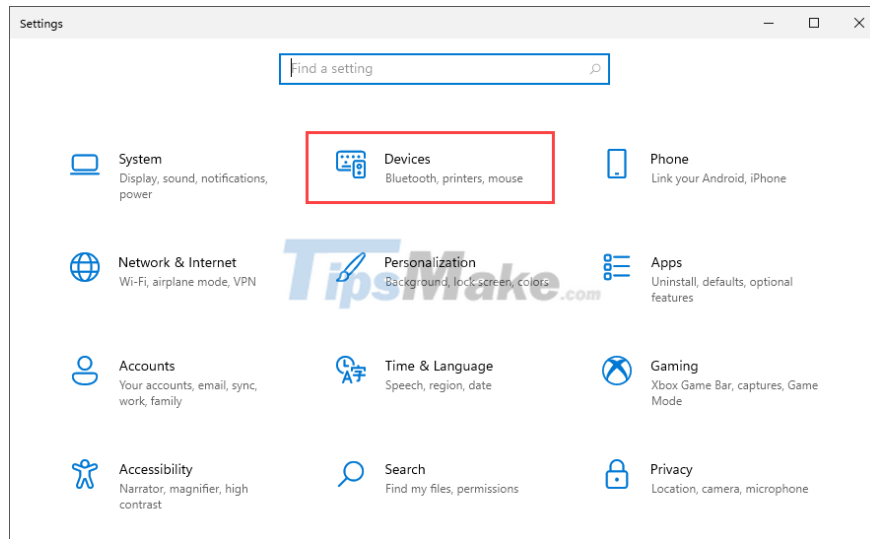

## 1. Adjust mouse speed on Windows 11 in Settings

In Windows 11's Settings, you can freely adjust the parameters on your computer quickly. Including adjusting the mouse speed on the computer.

Step 1: Open the Start Menu and navigate to Settings to open settings on your computer.

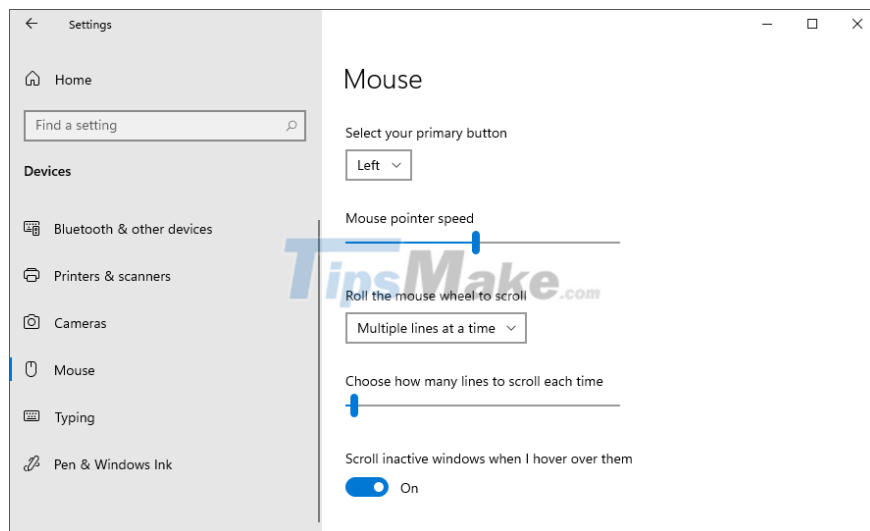

Step 2: Then, select the Devices tab to manage devices on your computer.

Step 3: When you need to change the mouse speed, you just need to select the Mouse tab and change the mouse speed in the Mouse Pointer Speed ??section.

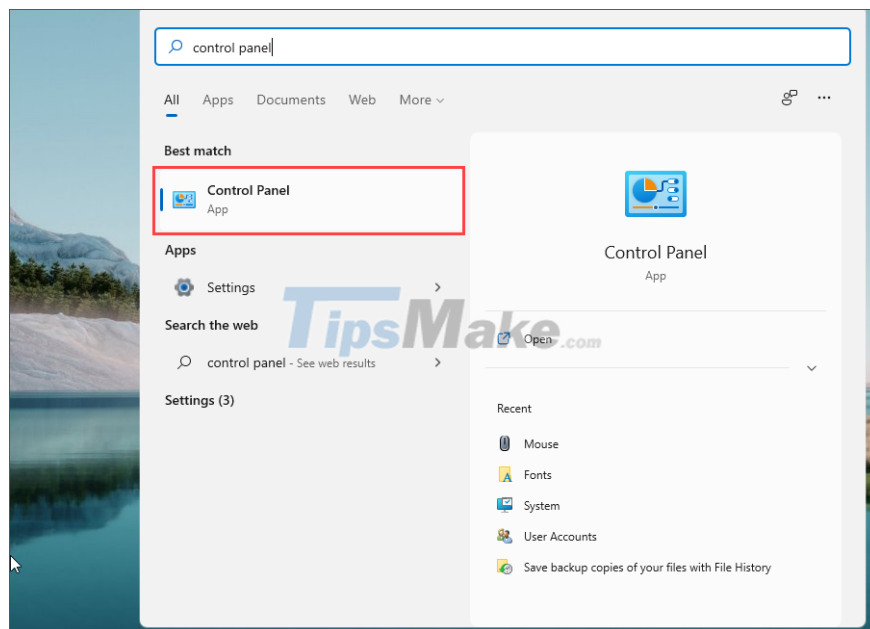

Mouse speed in Settings will be changed immediately as you adjust them.

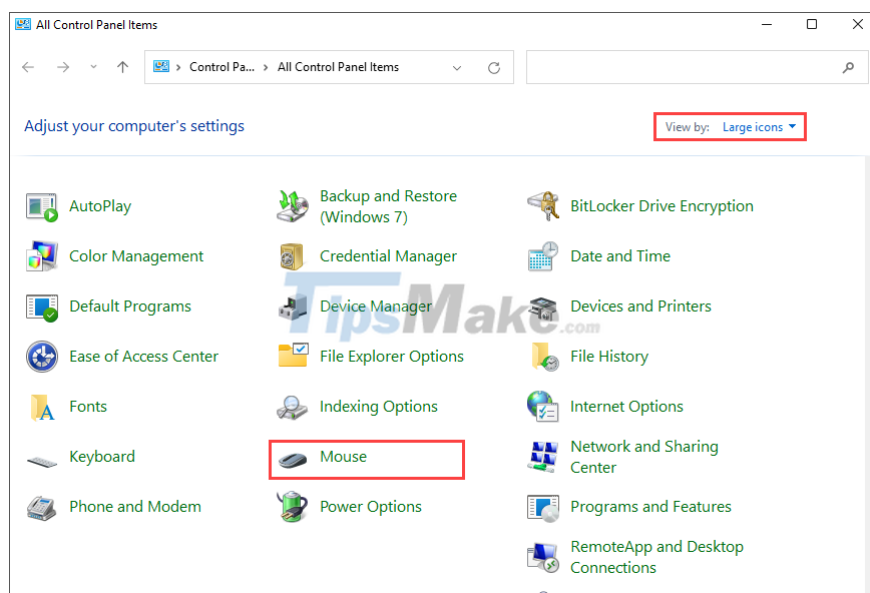

## 2. Adjust mouse speed on Windows 11 in Control Panel

Control Panel is a Windows system manager and they allow you to adjust all the basic parameters on your computer.

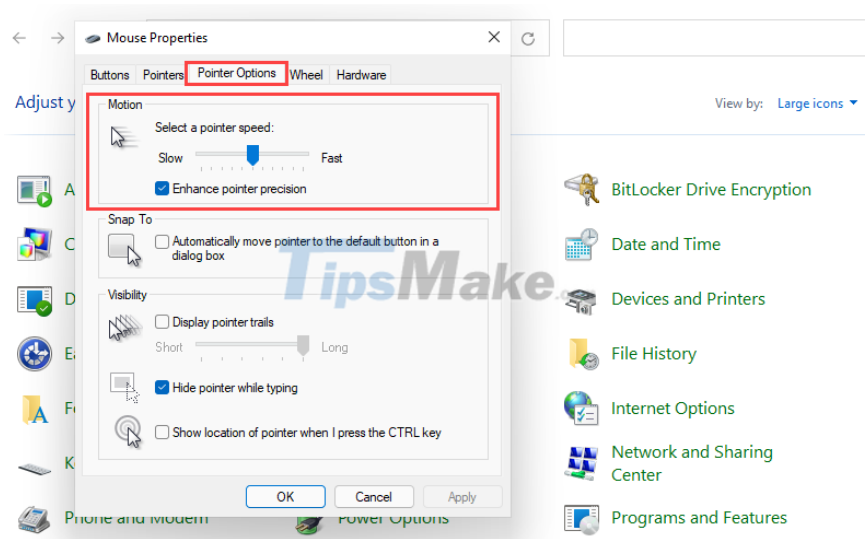

Step 1: Open the Start Menu and enter Control Panel to open the manager on your Windows computer.

Step 2: To find the mouse settings on your computer, change the View by mode to Large icons to see more icons. You just need to select the Mouse item to open the mouse device.

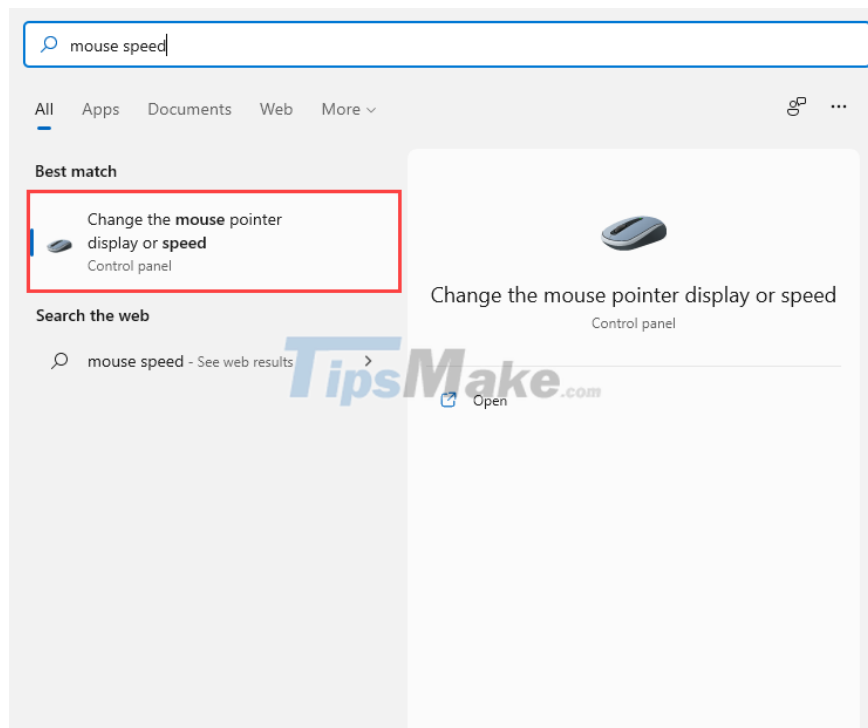

Step 3: To set the mouse speed, just select Pointer Options and change the mouse speed in the Motion section. In the mouse speed control bar, Slow will slow down the mouse and Fast will help increase the mouse speed.

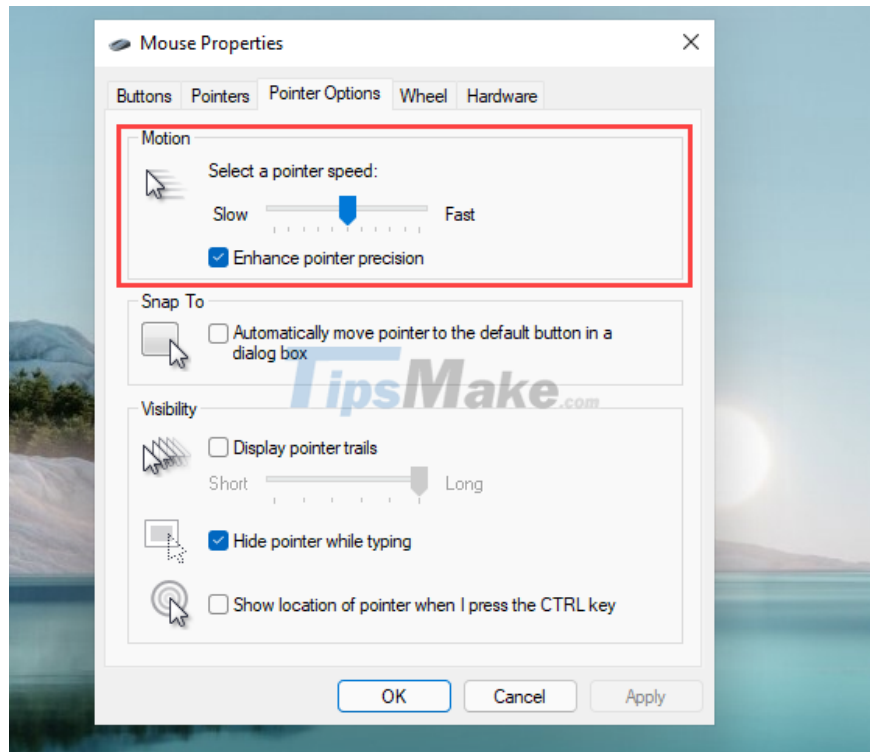

### 3. Adjust mouse speed fast on Windows 11

If you need to adjust the mouse speed quickly on Windows 11, you can also use the search command in Search to quickly check.

Step 1: Open the Windows search engine (magnifying glass icon) and enter Mouse Speed ??in the search bar. Then you just need to select Change the mouse pointer display or speed.

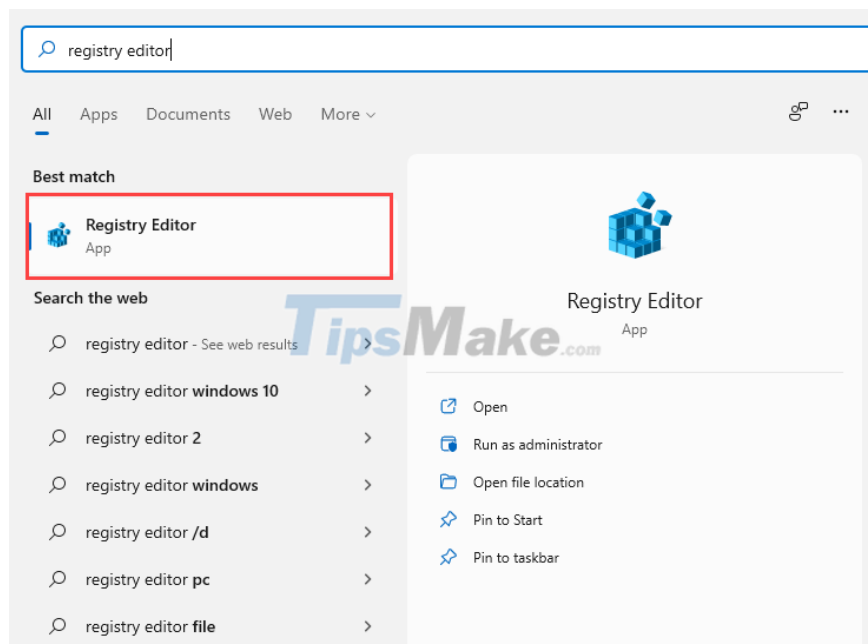

Step 2: Similar to the setting of mouse adjustment in Control Panel, you just need to change the mouse speed in the Motion section.

## 4. Adjust mouse speed on Windows 11 with Registry Editor

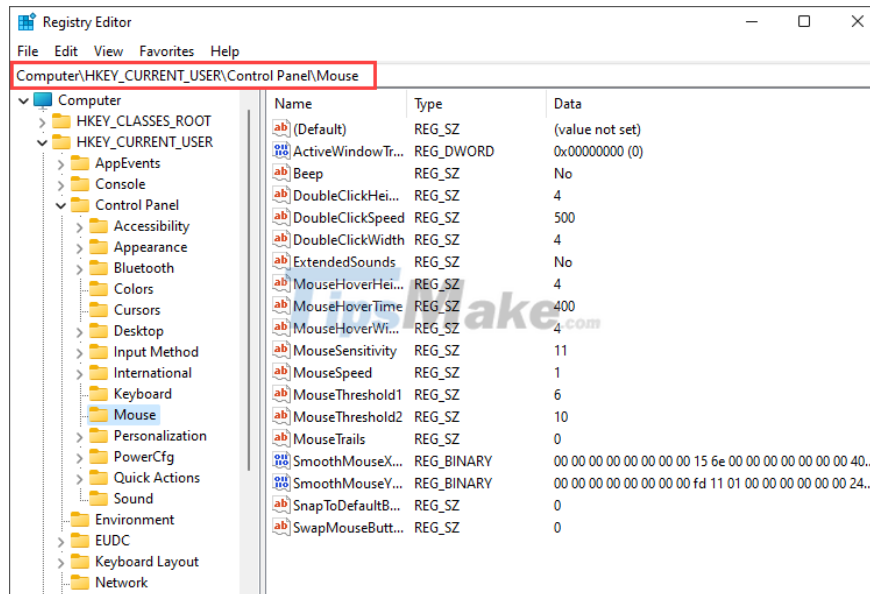

Registry Editor allows you to adjust parameters by directly interfering in the system and changing the value of system files.

Step 1: Open Registry Editor by typing Registry Editor in the search bar.

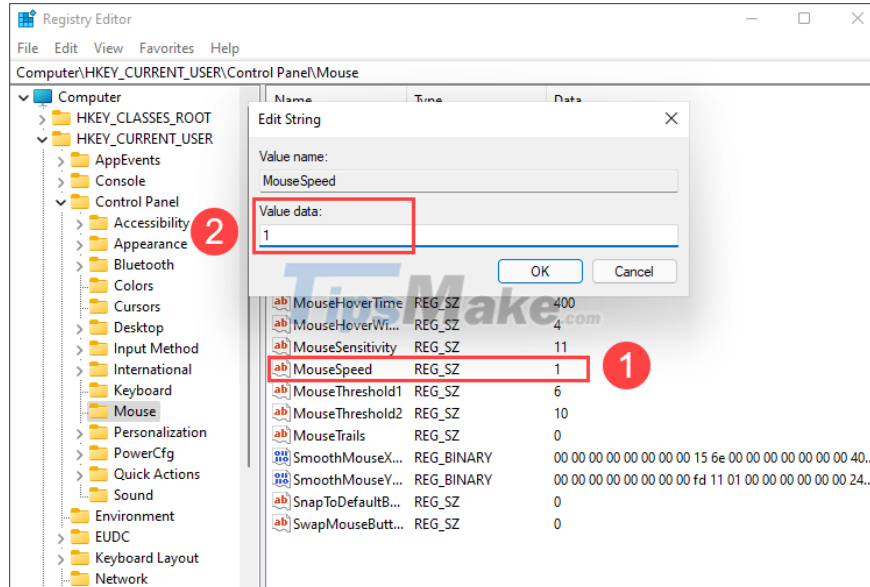

Step 2: In the Registry Editor window, open the folders in the following order:

Computer => HKEY\_CURRENT\_USER => Control Panel => Mouse

Step 3: In the Mouse folder, you just need to find the MouseSpeed file (1) and replace the mouse speed value in the Value Data section (2).

Currently, Windows 11 is supporting mouse speed values from 1 to 10 (gradually fast). You just need to enter the required speed into Value Data and click OK to finish.
