

Steps to fix printer error that can only print 1 page

The error of the printer only printing 1 page and then stopping usually comes from the system or the driver, fixing this error is usually quite simple, you can refer to the ways below.

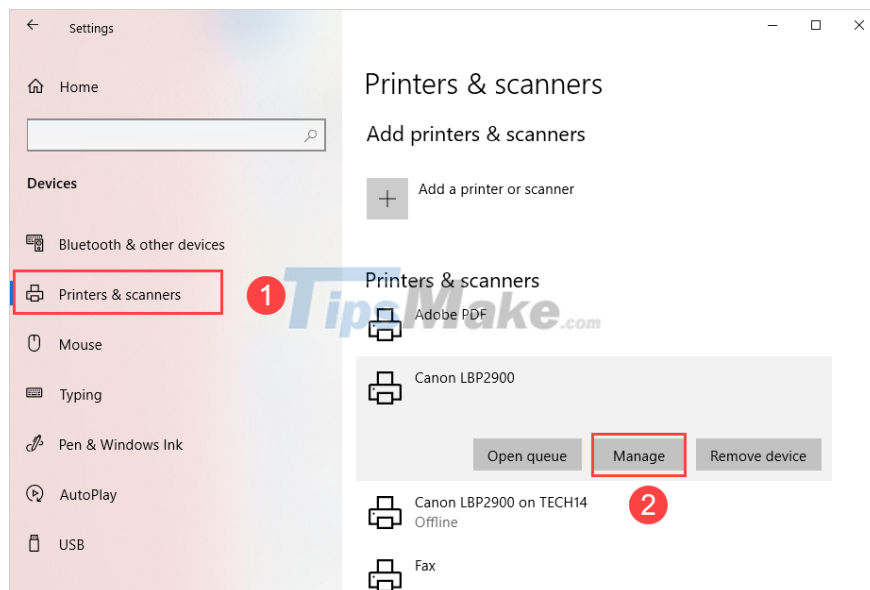

1. Fix the problem of printing only 1 page with Troubleshooter

In Windows, the manufacturer has provided us with the Troubleshoot tool with very impressive working efficiency. To fix the error that the printer can only print 1 page, please use this Windows tool.

Step 1: At the main screen of the Desktop, open MenuStart and enter Printers & Scanners to open the printer installer.

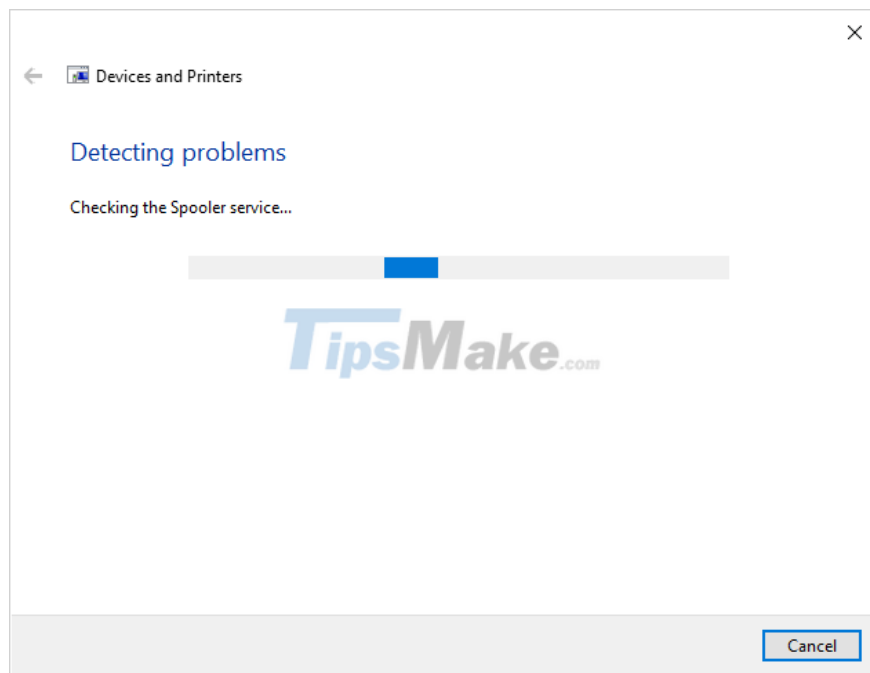

Step 2: In the Settings window, select Printers & Scanners (1) and select the printer you are using to open Manage (2) .

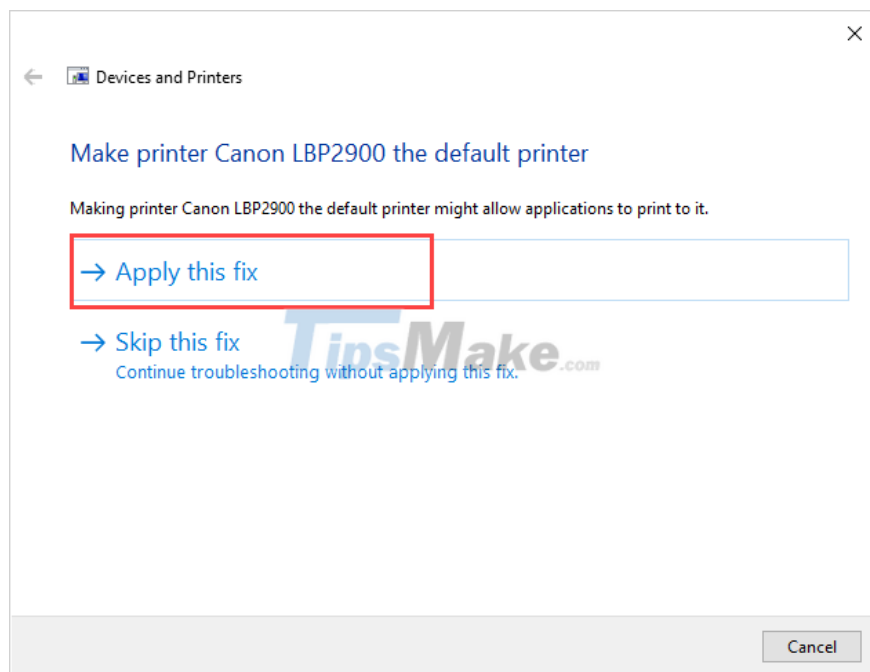

Step 3: Then, select Run the Troubleshooter to run the Windows printer repair tool.

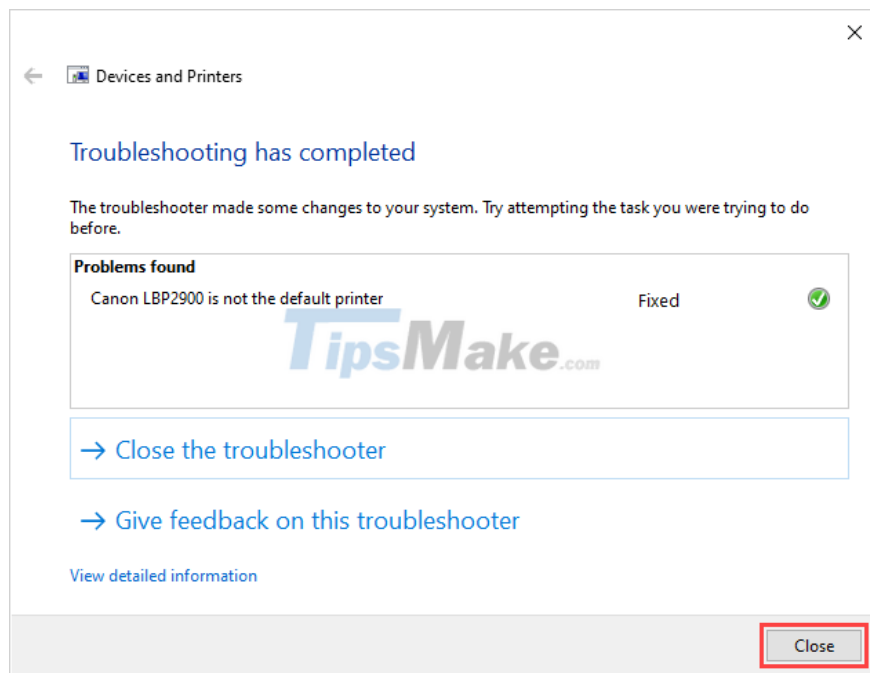

Step 4: The system will start to scan for errors and give you an error handling plan.

Step 5: Once you have confirmed the error, select Apply this fix to start fixing the error.

Step 6: After fixing the error, select Close to close the window and start trying to print again to see if the error still appears or not.

2. Reinstall the printer driver

In case the driver is broken by Virus, please reinstall the printer's latest driver from the homepage because the Troubleshoots tool can't be restored. Printer drivers are currently being released on the homepage of printer manufacturers, you can search through Google.

In this article, TipsMake have shown you how to fix the error of the printer printing only one page quickly and efficiently. Have a nice day!
