

Steps to fix the error of not opening Steam on Windows 10

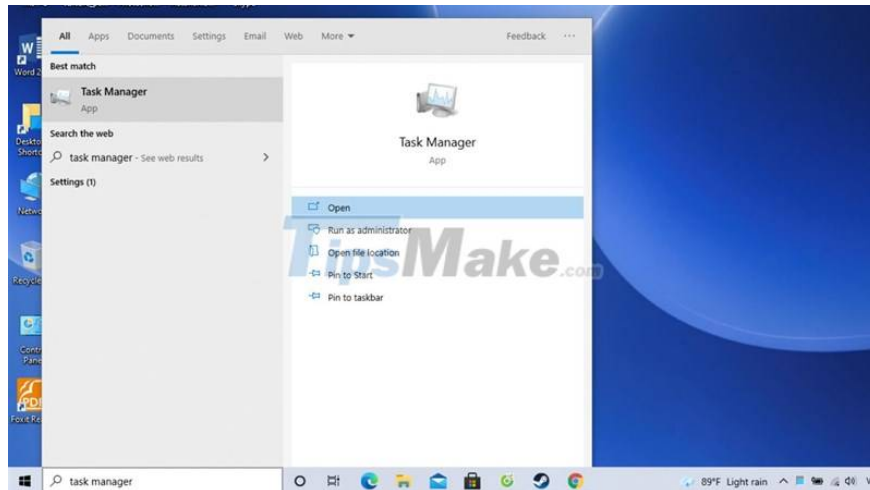

Steam is a popular PC online gaming platform. This article will show you how to fix the error of not opening Steam on Windows 10 very quickly.

Steam is an extremely popular online computer gaming platform that attracts a large number of players with more than 30000 games of various genres. Since the first day of launch, Steam has been constantly improved with more outstanding features, but making a few minor errors is still inevitable. This article will show you how to fix the error of not opening Steam on Windows 10 - one of the most common Steam errors.

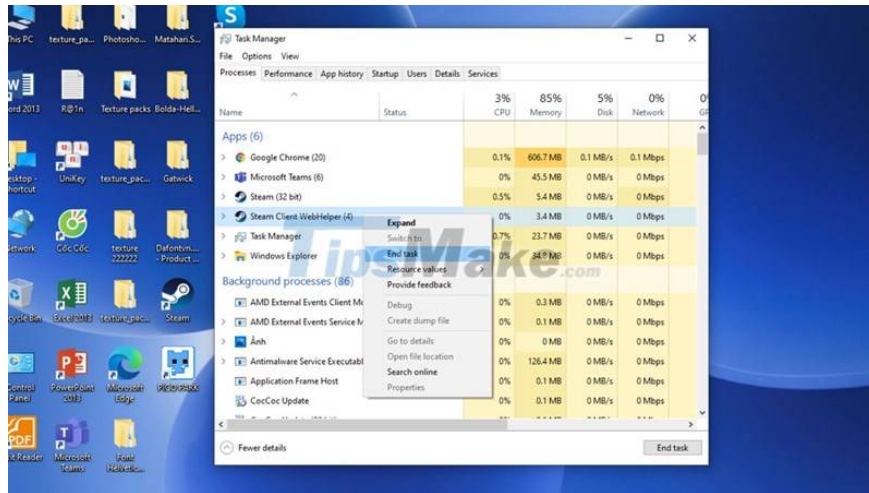

1. Restart Steam

To fix the error of not opening Steam on Windows 10, try restarting Steam with the following steps:

Step 1: In **Search Box System> Import Task Manager> Open** or press **Alt + Ctrl + Delete** on the keyboard.

Step 2: After displaying the **Task Manager** window , go to **More details > Processes > Find Steam > End task**.

Step 3: Once done, restart Steam.

2. Clear Steam's Cache

Another way to fix the error of not opening Steam on Windows 10 that you can apply is to clear the **Cache** memory . You can proceed with the following steps:

Step 1: Press the **Windows + R** key combination on the keyboard to launch the **Run Command** window , here enter: `steam://flushconfig` and click **OK** or press **Enter**.

Step 2: Then will display the **Clear Download Cache** window as shown below, select **OK** to clear the **Steam Cache** .

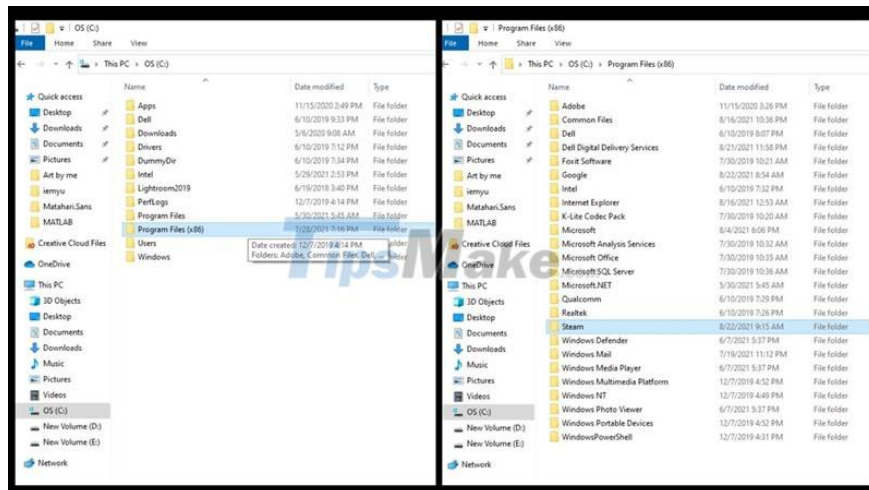

Step 3: Restart your computer and open Steam again.

3. Uninstall and reinstall Steam

If you've tried the two methods above but neither worked, the next thing you should do is remove and then reinstall Steam. However, reinstalling will not be difficult or cumbersome because you do not need to reinstall from the beginning, because when you uninstall the application, all the data you previously installed is stored in the **Program** section. **Files** . Therefore, you can take the following steps to reinstall Steam:

Step 1: In the **File Explorer**> **Select the C drive**> **Program Files (x86)**> **Steam**

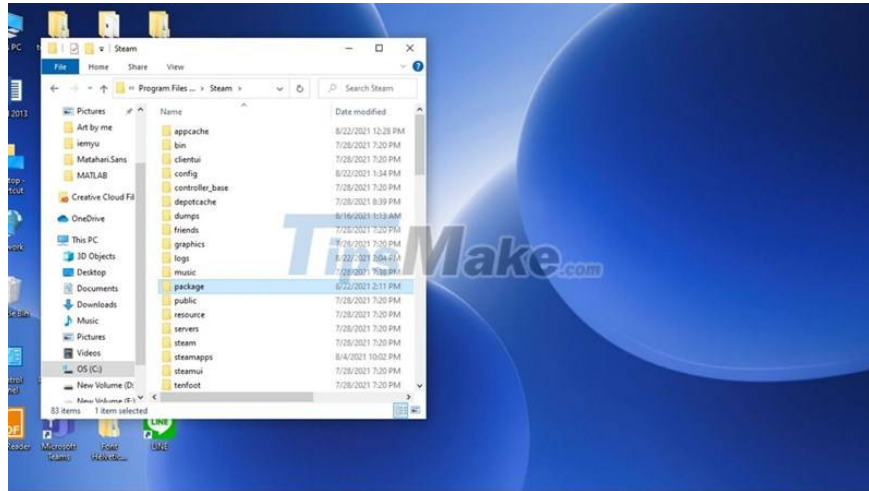

Step 2: Delete everything in the folder but keep the **Steam.exe** file , the **steamapps** and **userdata** folders . If the computer asks for administrator rights, grant it and continue with the deletion.

Step 3: After the deletion is complete, the next thing you need to do is double-click the **Steam.exe** item to reinstall it.

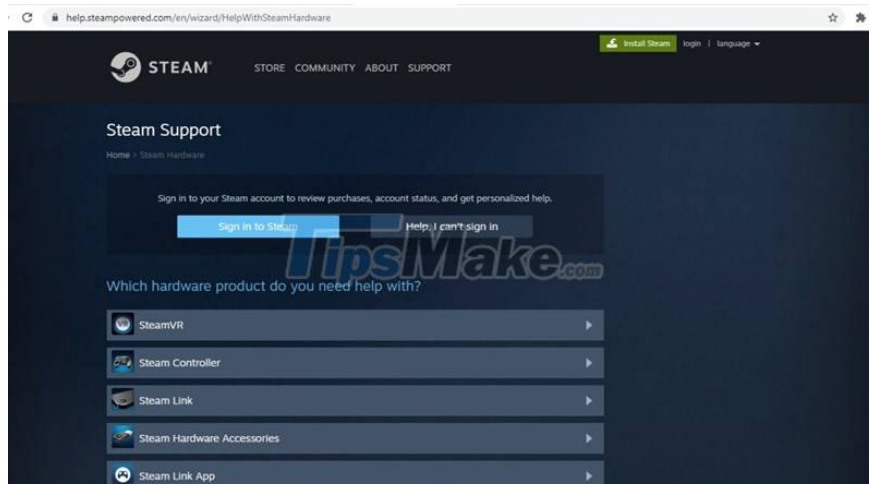

4. Check if you are running the Steam Beta Client

You should make sure you're not using the **Steam Beta Client** because **beta** apps are often unstable and may cause you problems. To fix this, you can go back to **the C drive** in your PC , then go to **Program Files (x86)**, select the **Steam** folder and go to the **package**. In the **package** section , find the file named **beta** and delete it.

5. Contact Steam Support
