

# Steps to install Google Assistant on Windows computer

The Google Assistant virtual assistant can be installed on Windows computers and they help users fully exploit Google's artificial assistant.

This is very encouraging because many people are looking forward to this virtual assistant on the computer instead of Cortana.

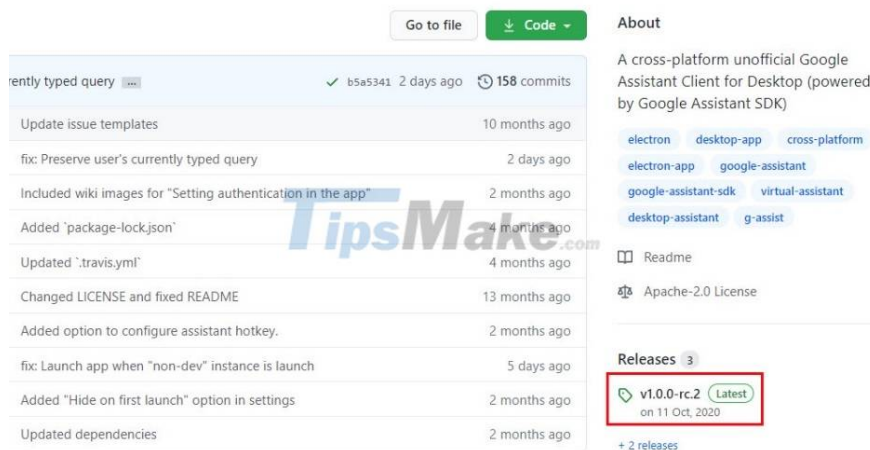

Windows is using Cortana virtual assistant, but in terms of work efficiency, Cortana is far from catching up with Google Assistant. Therefore, a lot of people intend to switch from Cortana to Google Assistant and they find ways to install Google Assistant on desktop computers and computers running Windows operating system. Here is a detailed way to install the Google Assistant virtual assistant on Windows computers, MacOS computers do the same.

## 1. How to download and install Google Assistant for Windows computers

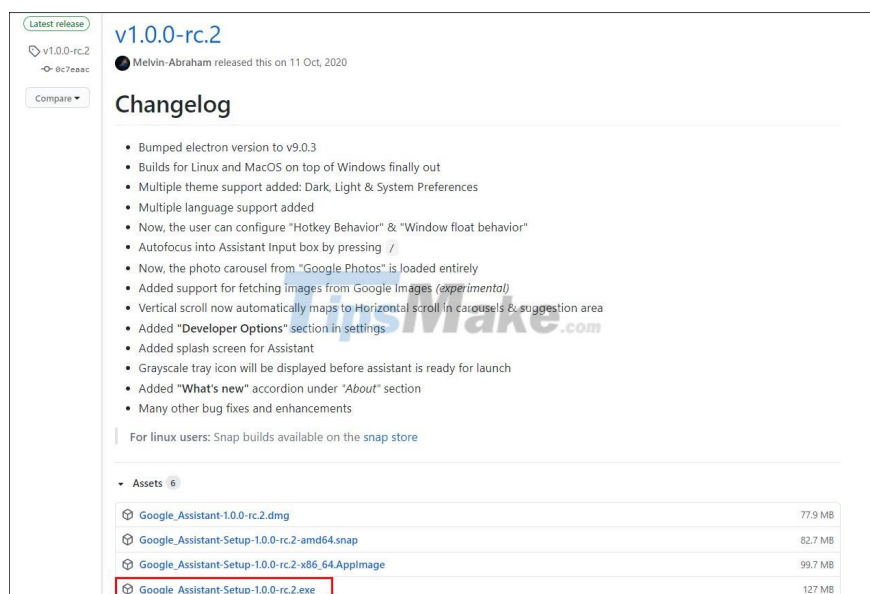

To install Google Assistant, you will need to go to the Github source code sharing site and follow the steps guided inside the software maker.

[Google Assistant download homepage here](#)

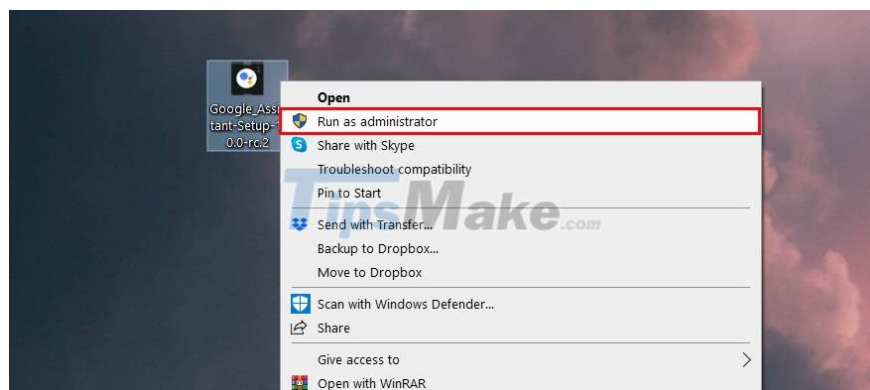

Step 1: You proceed to visit the homepage and click on the latest version in the Releases section .

Step 2: In this article, we will install Google Assistant for Windows computers, so please choose the version with the extension '.exe'. If you install for MacOS computer, select the extension '.dmg' and select '.snap' if installed on Linux operating system.

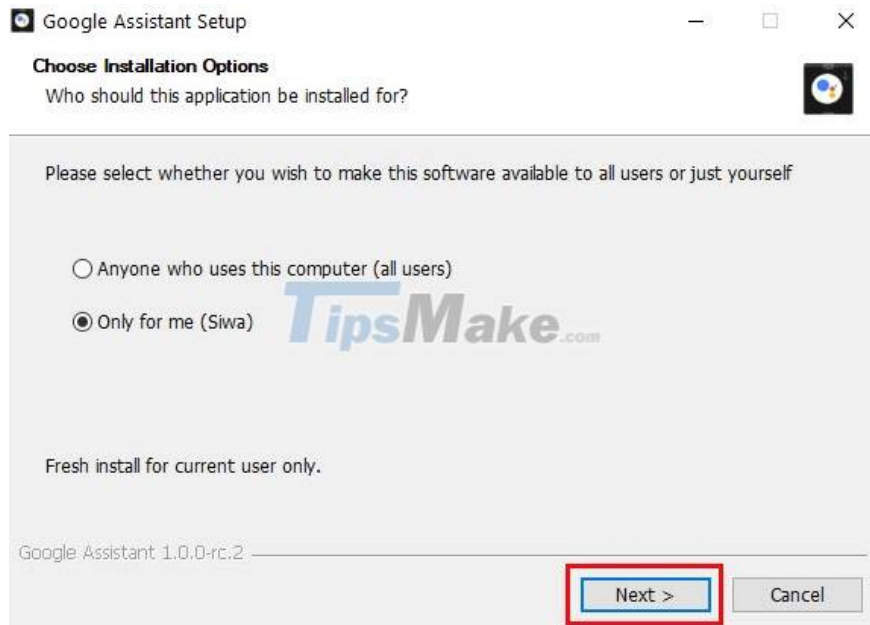

Step 3: After downloading the installer to your computer, right-click and select Run as administrator to install them on your computer.

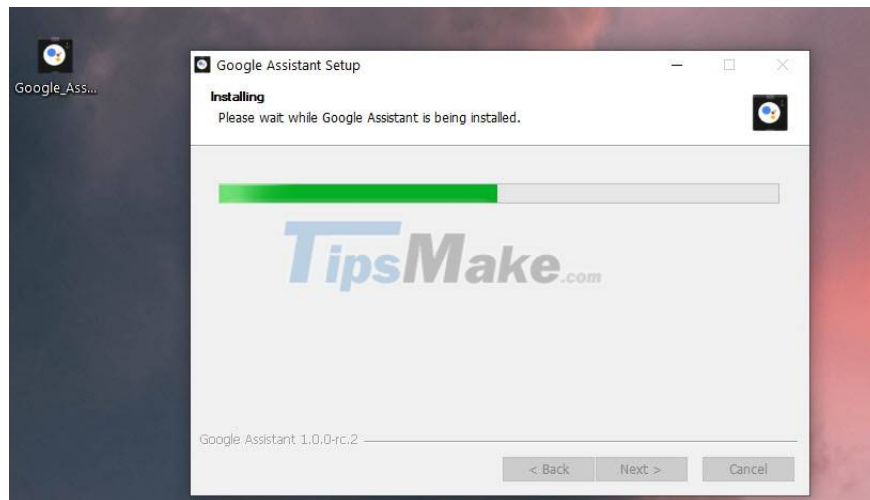

Step 4: When installing Google Assistant, the system will ask which Windows accounts you want to install on and you have the following options:

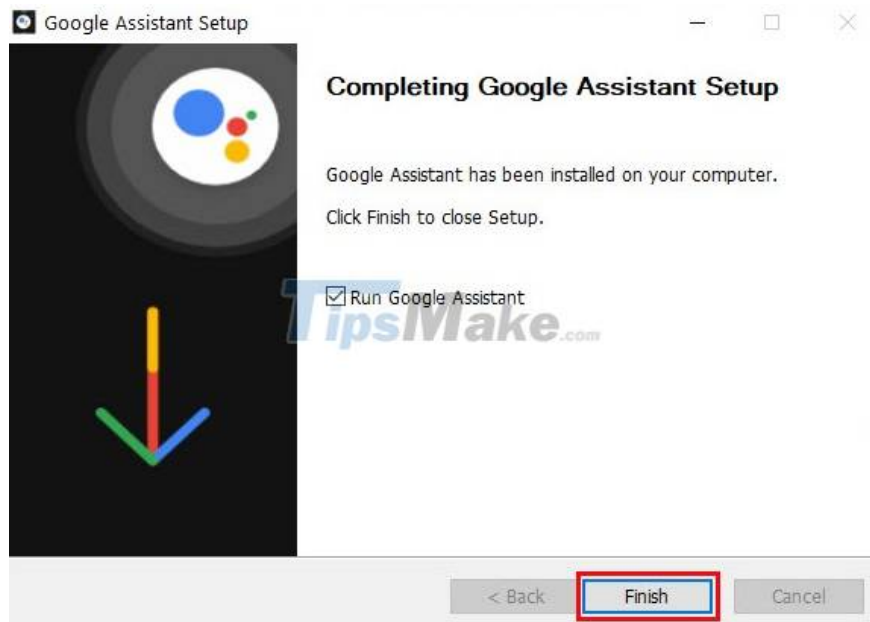

1. Anyone who uses this computer: Settings for all accounts on the computer
2. Only for me: Only install for the account in use.

Step 5: Now, wait for the system to split the package and install the software for you to use.

Step 6: After completion, you just need to select Finish to complete the installation.

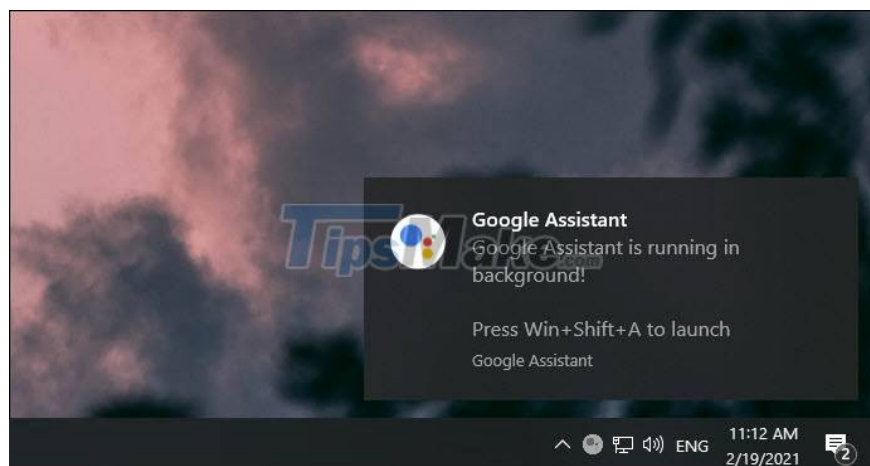

## 2. How to use Google Assistant on a Windows computer

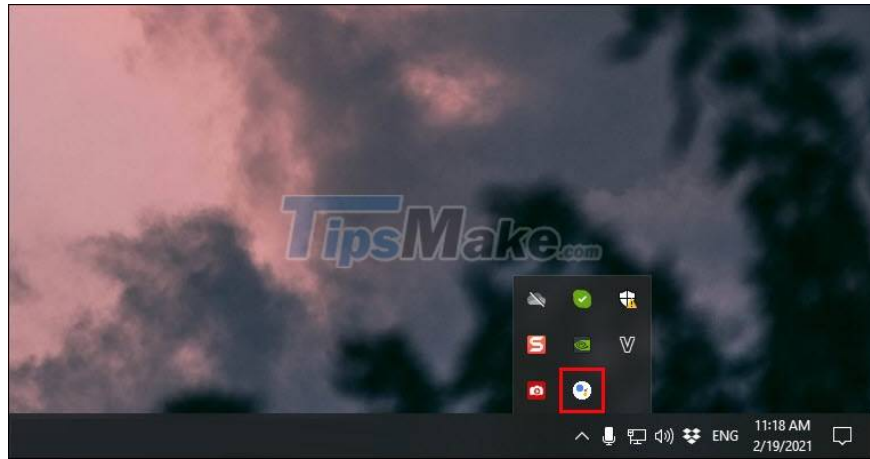

Once installed successfully, you just need to start Google Assistant by shortcut or manually to use. Here's how to call the Google Assistant on a Windows computer.

Step 1: The first time you start Google Assistant, you will have a notification window in the right corner of the screen with content like 'Google Assistant is running in the background, when you need to open them press Windows + Shift + A' .

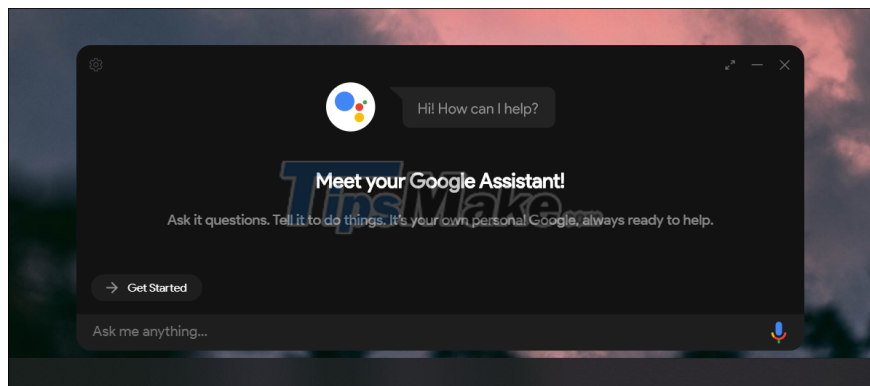

Thus, to quickly call Google Assistant, you just need to press the combination Windows + Shift + A .

In addition to opening Google Assistant with a keyboard shortcut, you can also open it through the icon located in the Taskbar of the computer system.

Step 2: When Google Assistant is started, you can enter questions by speaking in the microphone or typing text.

Step 3: Currently, Google Assistant on computers only supports English and some other languages.

Google Assistant on computers is built on Google Assistant for mobile devices, so all features are fully available, you can comfortably use.
