

Steps to turn off animation effects on Windows 11 to reduce lag

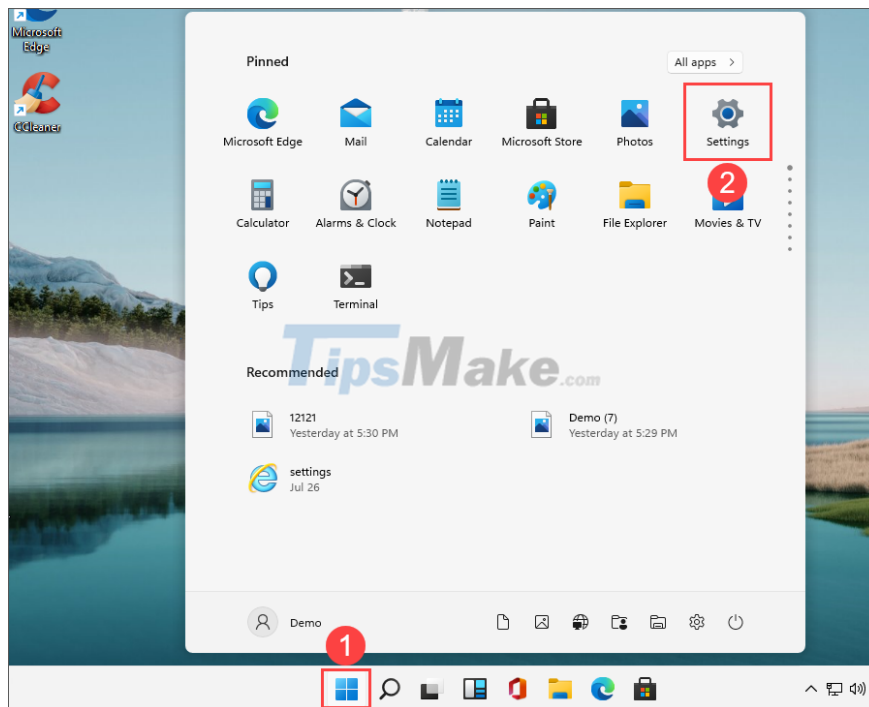

Turning off animation effects on Windows 11 will help the computer run smoother and no longer lag when switching windows, closing windows on the computer.

Here is the most detailed and effective way to turn off animations on Windows 11 to reduce latency on the computer.

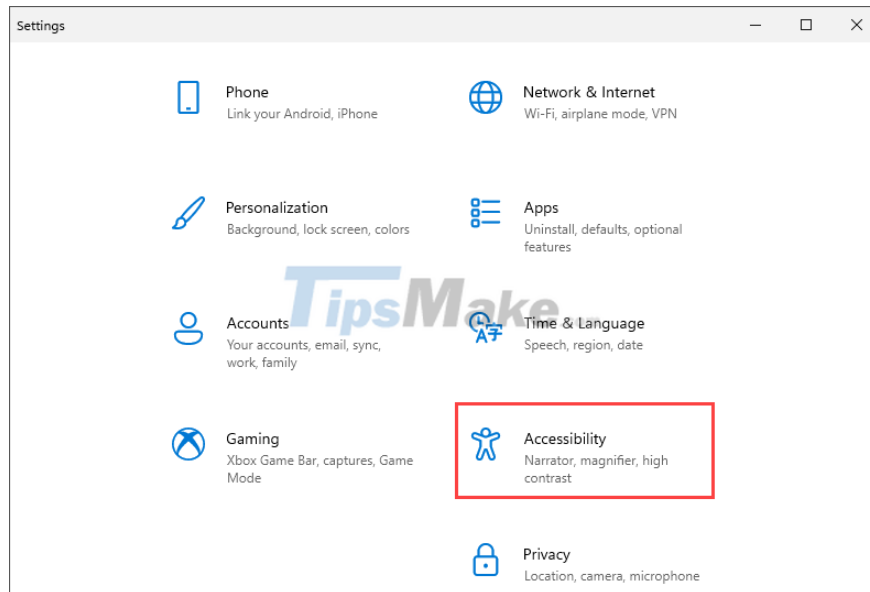

1. Turn off animations in Windows 11 settings

In Windows 11's settings, you can freely tweak various features, including disabling computer animations.

Step 1: Open the Start Menu and select Settings to open the settings on your computer.

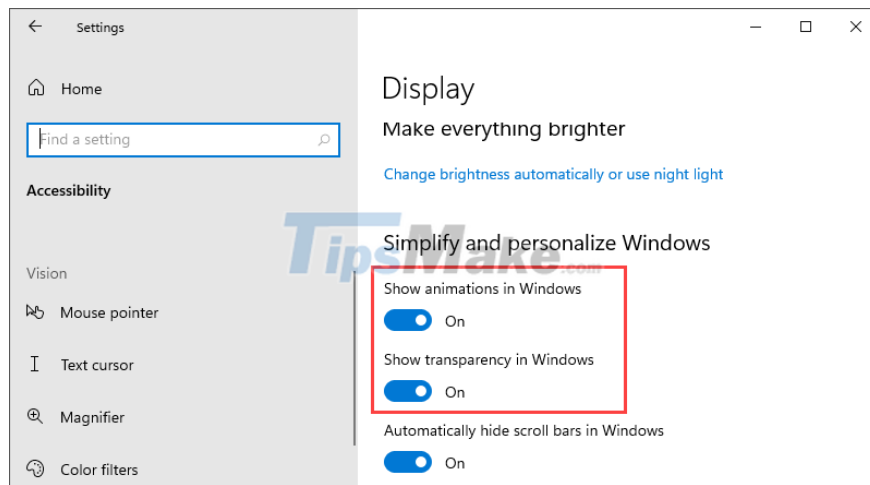

Step 2: In the Settings window, open the Accessibility tab to see the support features during use.

Step 3: Here, you just need to scroll down to the bottom to check Simplify and personalize Windows and turn off the following features:

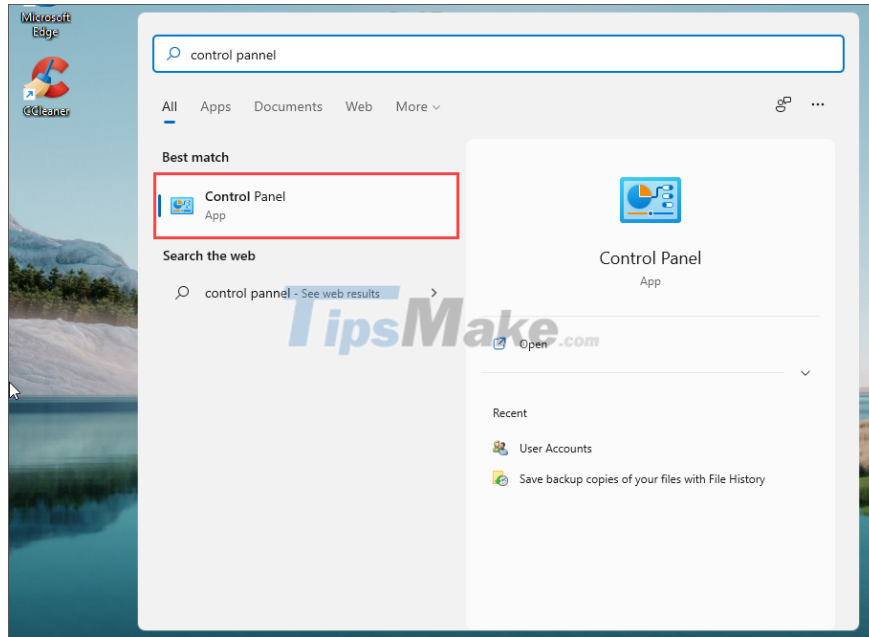

1. Show animation in Windows: Show animation effects on the computer
2. Show transparency in Windows: Show transparency effects on the computer

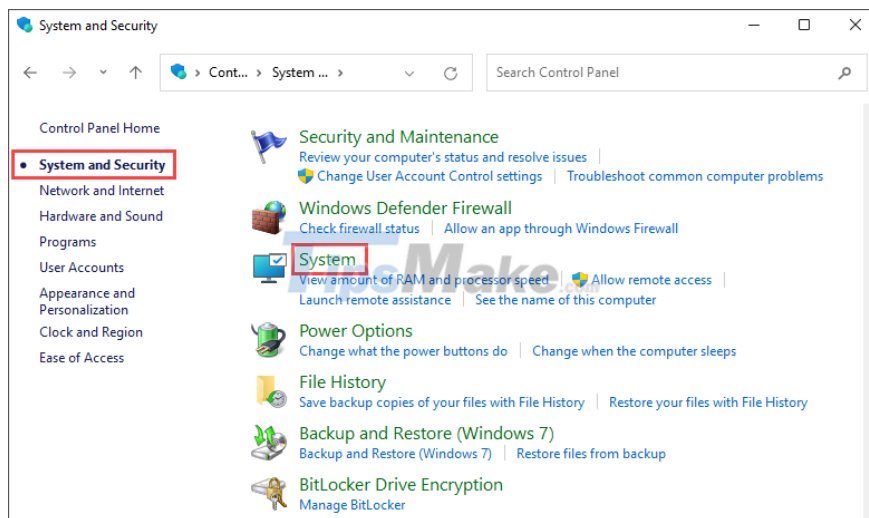

2. Turn off animations in Control Panel

Control Panel gives you a lot of different options on Windows computer systems, including turning off animation effects on Windows computers.

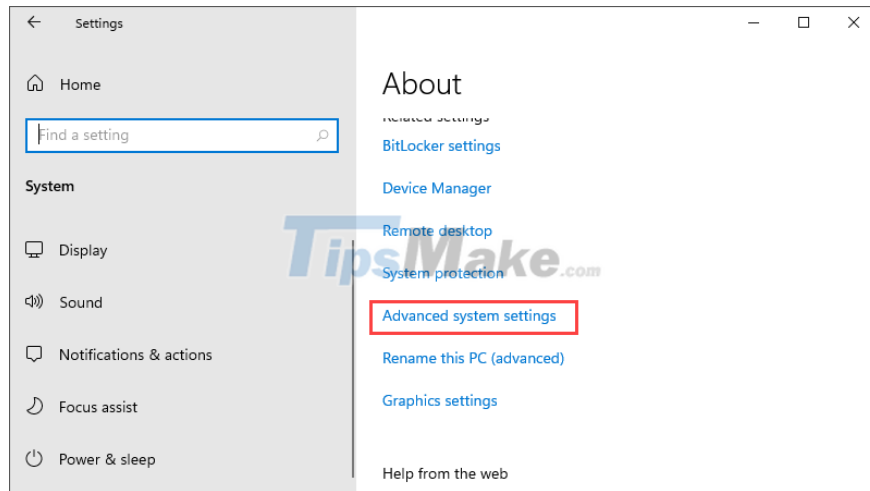

Step 1: Open the Start Menu and enter Control Panel to open it.

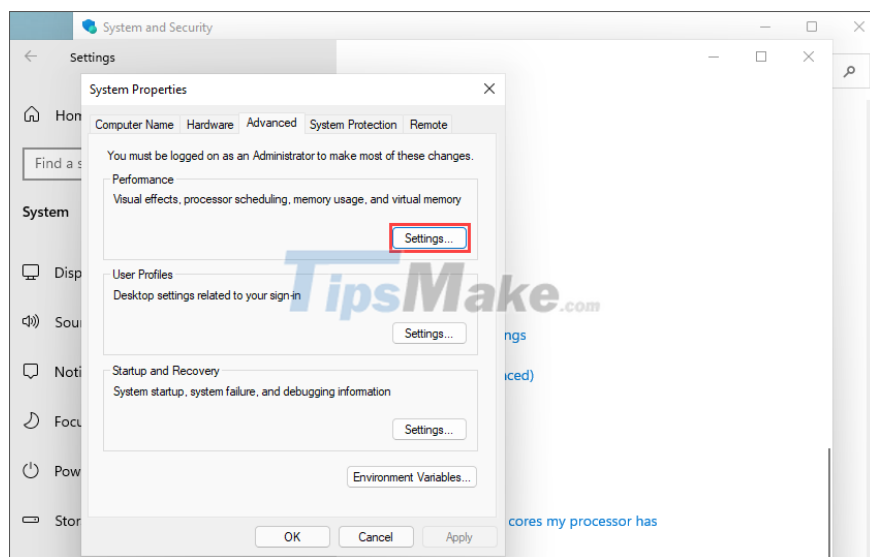

Step 2: In the Control Panel window, select System and Security in turn and select System.

Step 3: Next, select Advanced system settings to view system-related settings.

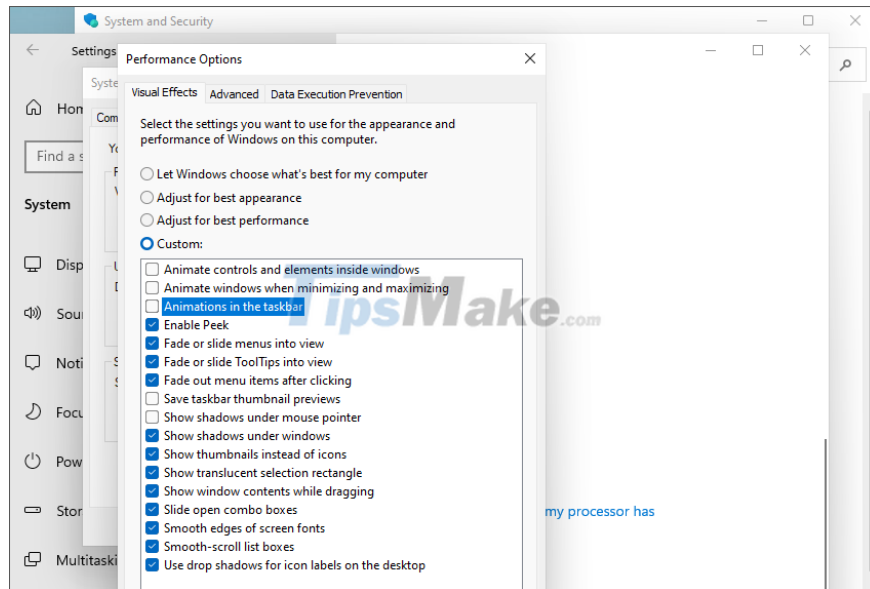

Step 4: To set performance on a Windows computer, select the Settings item in the Performance tab.

Step 5: Here, you will have a lot of different settings, but if you only turn off the animation effect, you just need to deactivate the following items:

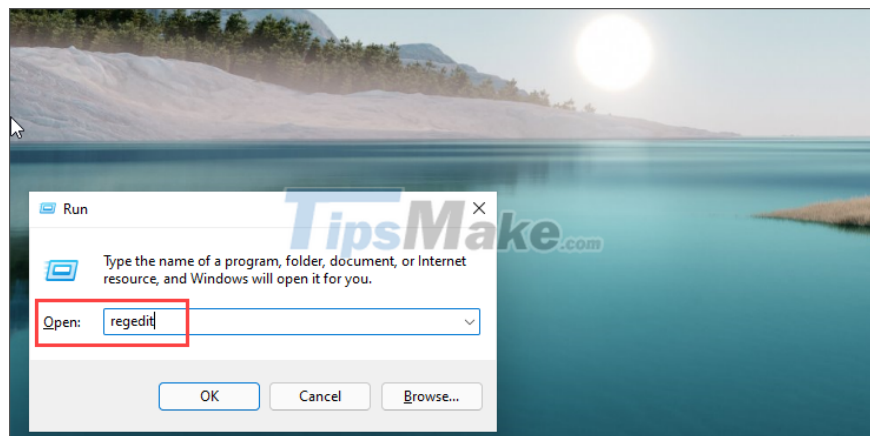

1. Animate controls and elements inside Windows.
2. Animate Windows when minimizing and maximizing.
3. Animations in the taskbar

3. Speed up live response in Regedit on Windows 11

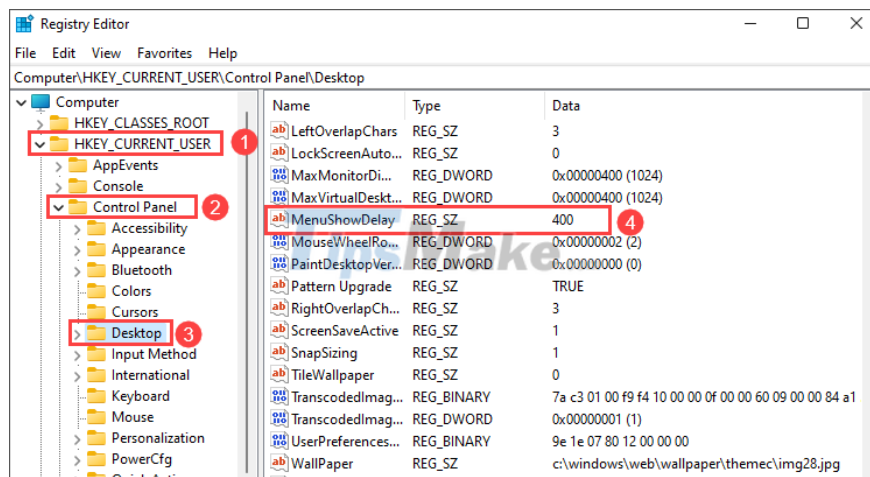

In addition to disabling animations, you can adjust the response speed directly in Regedit to improve the response speed on Windows computers.

Step 1: Press the Windows + R combination to open the RUN window and enter Regedit to open it.

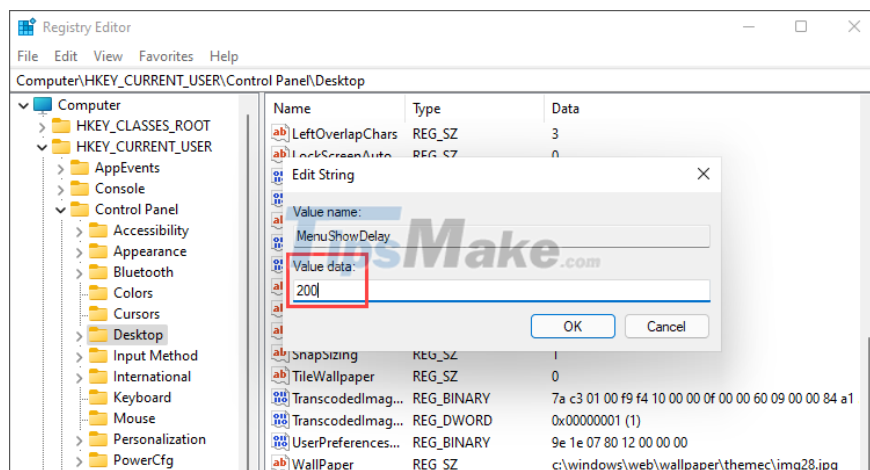

Step 2: In the Regedit Editor window, open the following folders in turn:

HKEY_CURRENT_USER => Control Panel => Desktop => MenuShowDelay

Step 3: By default, the system will set MenuShowDelay Value Data to 400 (default delay). To speed up the response, turn it down to a smaller value.

In this article, Tipsmake will set the Value Data value to 200 to make the response speed twice as fast.

In this article, Tipsmake showed you how to turn off animation effects on Windows 11 to reduce lag. Good luck!
