

Steps to use BeWidgets to display eye-catching widgets on Windows 11 interface

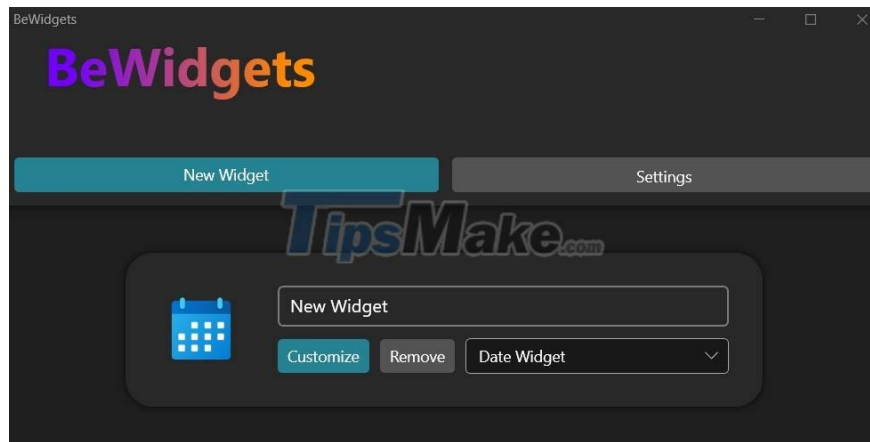

Windows 11 has a feature called Widgets with the ability to display widgets for news, weather, traffic information, finance... However, these widgets are in a separate interface that users have to turn on. just seen. If you do anything else, the widget interface will disappear immediately.

In this article, TipsMake.com will show you how to use BeWidgets, a tool that allows you to display widgets on the Windows 11 screen. It will help you customize the Windows 11 interface to make it more beautiful and less boring. than.

Instructions for using BeWidgets on Windows 11

Step 1 : Download the free BeWidgets app from the Microsoft Store itself [here](#).

Step 2 : Open the application and click the **New Widget** button to add the widget you want. The app offers widgets such as time, date, images, financial information, weather and even shortcuts for you to access your favorite apps.

Step 3 : On the **New Widget** interface you will see **Customize** buttons to customize the widget, **Remove** button to remove and drop down menu for you to choose the widget you like.

Step 4 : After selecting the widget and bringing it to the screen, you can still adjust the parameters such as size, font, color to suit your preferences and background.

Adding widgets to the Windows desktop is not a new feature. Microsoft used to allow users to put widgets on the screen on Windows 7. However, this feature has since been removed. Hopefully with BeWidgets you will feel excited when once again being brought to Windows 11 the widgets you like.

Good luck!
