

Storage drop brakes with new microSD memory card of Integral Memory 512GB capacity

If 400GB is still not enough, Integral Memory has recently announced it will release a 512GB microSD card.

At the IFA event held in Berlin last year, SanDisk announced the release of a 400GB microSD memory card. If that's still not enough for you, Integral Memory recently announced that they will be releasing a 512GB microSD card.

This memory card meets the V1, Class 10 and U1 standards. In other words, the minimum read / write speed will be at least 10MB / second, half the standard U3 / V30 standard cards. It is clear that it is not ideal for Android or Nintendo Switch, but it is fine to shoot 1080p videos.

New memory cards meet increasing storage needs

Integral Memory will start selling this memory card from next month and can run on any device that supports the microSD XC standard. These memory card tests provide a maximum transfer rate of 80MB / sec.

Integral Memory has always defeated all competitors by offering memory cards that meet the increasing demands of mobile devices. The new 512GB microSDXC V10, UHS-I U1 memory card will bring Android smartphones and tablets larger capacity to store more images, videos, applications without worrying about memory.

There is currently no detailed information about the price of this product.
