

Strange common characteristics of geniuses: Not interested in sex

You wonder if you are a genius yet to be released. The following features can answer that concern.

1. You think this is bad, science is a genius
2. Why is Bill Gates called a "eccentric genius"?
3. The 2-hour rule of geniuses like Einstein, Darwin and Nietzsche

People tend to think that geniuses are extraordinary and incomparable people, who cannot classify or resemble anyone else. That is only partly true, according to psychological researchers, besides these things, geniuses often share some characteristics such as big breasts, sexual dislikes, or nighttime . these are special The point is considered extremely strange, but it proves that you are a genius.

1. Women with big breasts

Big breasts and human IQ have similar relationships. According to a survey of 1,200 women with different chest size, those with large breasts often had a higher IQ than those with an average chest size of about 10 points.

2. Not interested in sex

Many people often argue that women often dislike a man who always piles on books or computers. But in fact this is not quite so, it's more complicated than what you think a lot. Recently researchers at top universities, including MIT, show that smart students often have fewer partners than ordinary students. Besides, the rate of smart students and virginity is also about 45% higher than normal students.

There are many reasons to explain this phenomenon, but there are 3 outstanding reasons as follows.

1. First, there are hormones in the body that testosterone boosts male sexuality, and it also counteracts substances that affect intelligence. Even cause smart inhibition. Referring to those with normal IQ will be very strong male.
2. The second reason is that the smart people are often deeply aware of life, especially the danger comes from sex. Because of their conscious mind, they can completely avoid unnecessary risks, especially when masturbating or restraining their own desires is not dangerous at all.
3. The third is that people with high IQ often spend more time on studying than gathering friends, they think that these useless jobs are not necessary for them. It is this that makes it difficult for them to reach the opposite sex, which leads to less opportunities to make love with the opposite sex.

3. Enjoy using addictive substances

According to the statistics of experts, people with high IQ often prefer to use addictive substances. Perhaps many will be surprised, and ask why geniuses use drugs, because with their intelligence they have enough awareness to know how dangerous this substance is to health. And researchers have shown that smart people who use drugs are able to experience new things in life, such as playing illegal games.

4. Regularly stay up all night

Frequent insomnia is common in smart people, when IQ increases, meaning their nighttime sleep will be reduced. This may indicate that when the mind is active, too sensitive will make it difficult for people to get a good night's sleep, or at night it is the quietest time for them to work. The most effective.

5. Being an alcoholic

According to researcher Satoshi Kanazawa, alcoholics are often office geniuses. This study made many people feel surprised, and explained to this Satoshi Kanazawa explained that using alcohol helps the spirit of them feel more comfortable, relieve stress more.

6. Have blue eyes

People with blue eyes often have better strategic and self-determination activities than those with normal brown eyes. Carl Sagan, Stephen Hawking are extremely famous scientists, and these people all have blue eyes. This is considered a good example of this.

And those with brown eyes are suitable for activities that need quick progress. While people with dark colored eyes are suitable for sports activities.

7. There are simple entertainment activities

Recently researchers have revealed that geniuses often have very simple and normal entertainment activities. This is probably the brain's need, to help the brain rest and recover from stressful working hours. Many of the greatest geniuses in history have these interests. For example, Einstein likes to sail, Stephen Hawking likes to climb mountains, go sailing, even write children's books. Maybe the trend of water sports is also a little-known trait of genius.

8. Pursuing nonsense things

Many geniuses in history have been judged to pursue nonsense at the time they were living. John Alexander Newlands was once laughed at by the scientific world when he invented the first chemical periodic table. Meanwhile, the Wright brothers were ridiculed because of the endless experiments on airplanes, even being called liars when offering a live show. Gregor Mendel discovered the origin of genetics and was quickly ignored by the entire scientific community.

The problem is that geniuses often don't see the world as the rest of society. Therefore, they tend to pursue strange ways to achieve great achievements.

9. Like to doodle on paper

There is a similarity of geniuses and artists that are able to effectively handle abstract thinking effectively. And of course when they talk about something, they will also speak in an abstract way. When ordinary people cannot fully understand the problem they give, the doctrines and ideas will be transformed into images. This is how smart people often do to help people around them understand better.

10. Having a mental illness

Geniuses are weirdos. Most of the best people in academia are judged to be eccentric, which makes them different from others. Obsessive-compulsive disorder (OCD) and attention deficit syndrome (ADD or ADHD) are the two most common diseases in people with high IQ. Scientist Nikola Tesla is said to have had a fear of human hair, while Da Vinci is thought to have severe ADHD.
