

Strange similarities of ancient works

In the world there exist ancient buildings of different civilizations on opposite sides of the hemisphere but have quite similar architecture to each other.

In the world there exist ancient buildings of different civilizations on opposite sides of the hemisphere but have quite similar architecture to each other.

Richard Cassaro , studied and pointed out the similarities of the architectures of **ancient Egyptian Inca** civilizations. The two ancient civilizations that developed at opposite sides of the Earth hemisphere have quite similar ancient structures.

Pyramid. Egyptian pyramids, the ancient Inca and the ancient Incas were all built on desert along the river and were rightly aligned.

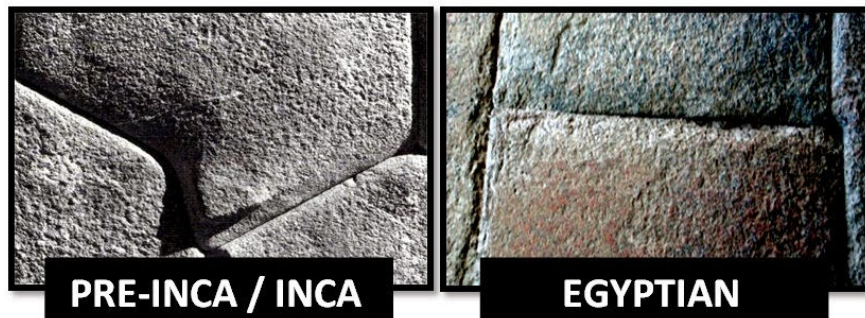

Megalithic architecture. Egyptians, Pre-Incas and Incas transported rocks weighing more than 10 tons to build the greatest buildings on the planet.

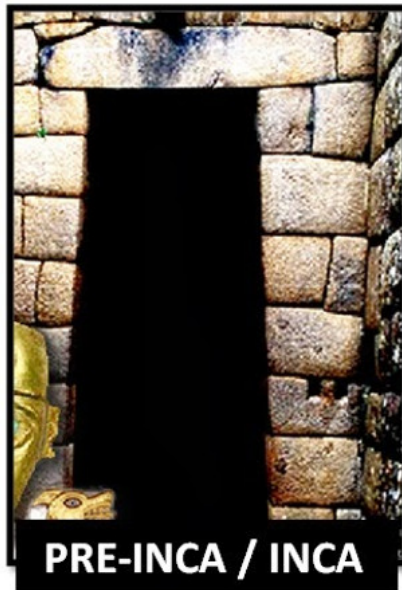

And the way they transport stones is still a mysterious question to this day.

Egyptians, Pre-Incas and Incas all built inward slopes. These structures can resist earthquakes and exist today.

The stones are so tightly fitting that it is impossible to insert a thin sheet of paper through the slot
