

# Stun with Vivo NEX S camera's durability test by dancers

In the video, the selfie camera cluster on 8 Vivo NEXs is switched on to support a 40kg glass surface. Later, a bale dancer (weighing 50kg) performed on that glass surface

Channel YouTube KhGadgets has posted a test video of the durability of the camera cluster "sniffing" on the NEX S that many people can enjoy.

In the video, the selfie camera cluster on 8 Vivo NEXs is switched on to support a 40kg glass surface. Later, a bale dancer (weighing 50kg) performed on that glass surface. Thus, the payload of each camera cluster must be around 11.25kg. However, when dancers perform dance moves, each camera must bear a load of up to 17.5kg.

After the test, the dancer performed some selfie photos with each Vivo NEX machine to prove that all the cameras on these devices have no signs of being damaged.

According to Vivo, Vivo NEX's "retractable" camera cluster can withstand loads up to 45KG and 50,000 times.
