

Stunned to find an ancient 3000-year-old cheese cooking pot

A strange archaeological object like an array of plaques resembling the estimated 3000-year-old cheese ingredient has been stirring up foreign archaeologists.

A strange archaeological object like an array of plaques resembling the estimated 3000-year-old cheese ingredient has been stirring up foreign archaeologists.

Accordingly, Silkeborg of DENMARK - Science Nordic has reported that he found a strange object like an ancient clay pot estimated to be around 3000 years old, excavated and found in Denmark. .

The diagnosis of archaeological traces shows that this clay pot is discarded after being burnt when cooking something or something.

After examining the trace on the pot wall, the bottom of the old clay pot, Silkeborg suddenly spotted layers of yellow-white powder.
