What to do to avoid spreading hot photos like Hollywood stars, guide installing Android 4.4 KitKat on your computer, tips to save time using your computer, remove dust from your laptop, create password protection folder yourself without software to solutions to protect social networks, . are the most interesting news tips this week!

## 1- What to do to avoid spreading 'hot' photos like Hollywood stars?

After a series of famous stars spread nude photos over the weekend, you should make sure all images stored on your iPhone are safe. Although you do not know the culprit and the final method of the attack, you can still follow some steps below to protect yourself: **See details!**

1. **Disable auto sync iCloud:** If the image on iPhone automatically uploads to iCloud, they will be stolen by hackers if they have your account and password.
1. **Delete everything in Photo Stream:** If your photos automatically upload to iCloud before, you can go back and review them to decide what to delete, what to keep.

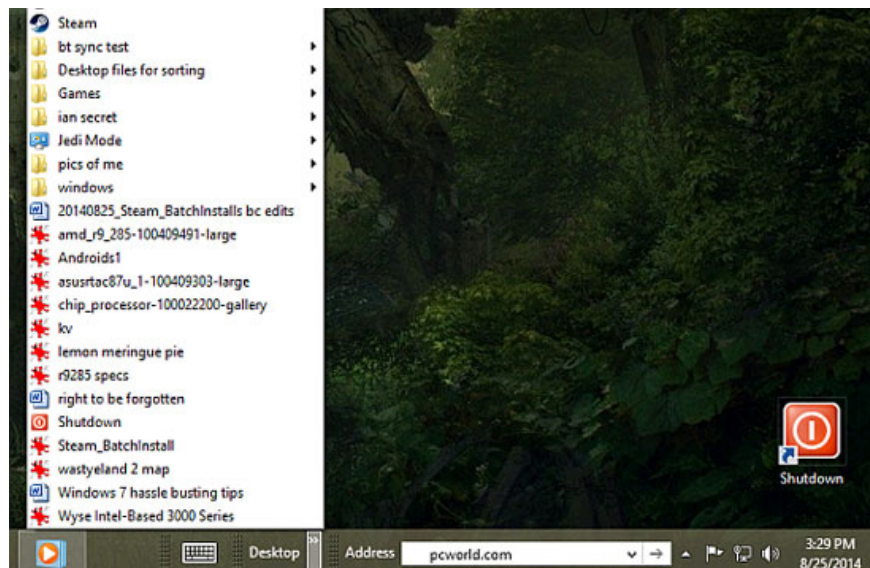

1. **Activate two-step authentication for iCloud:** Before the final conclusion about the attack, Apple advises users to use strong passwords and two-step authentication. When activated, the system requires you to enter the second code sent to the registered device to login to the iCloud account.

## 2- Instructions to install Android 4.4 KitKat on the computer

We can only emulate the Android operating system and not completely install it and use it ' *thoroughly* ' and comfortably. This article will use the Android version created by Android-x86, an unofficial project for developing Android installers on computers using Intel x86 hardware structure. **See details!**

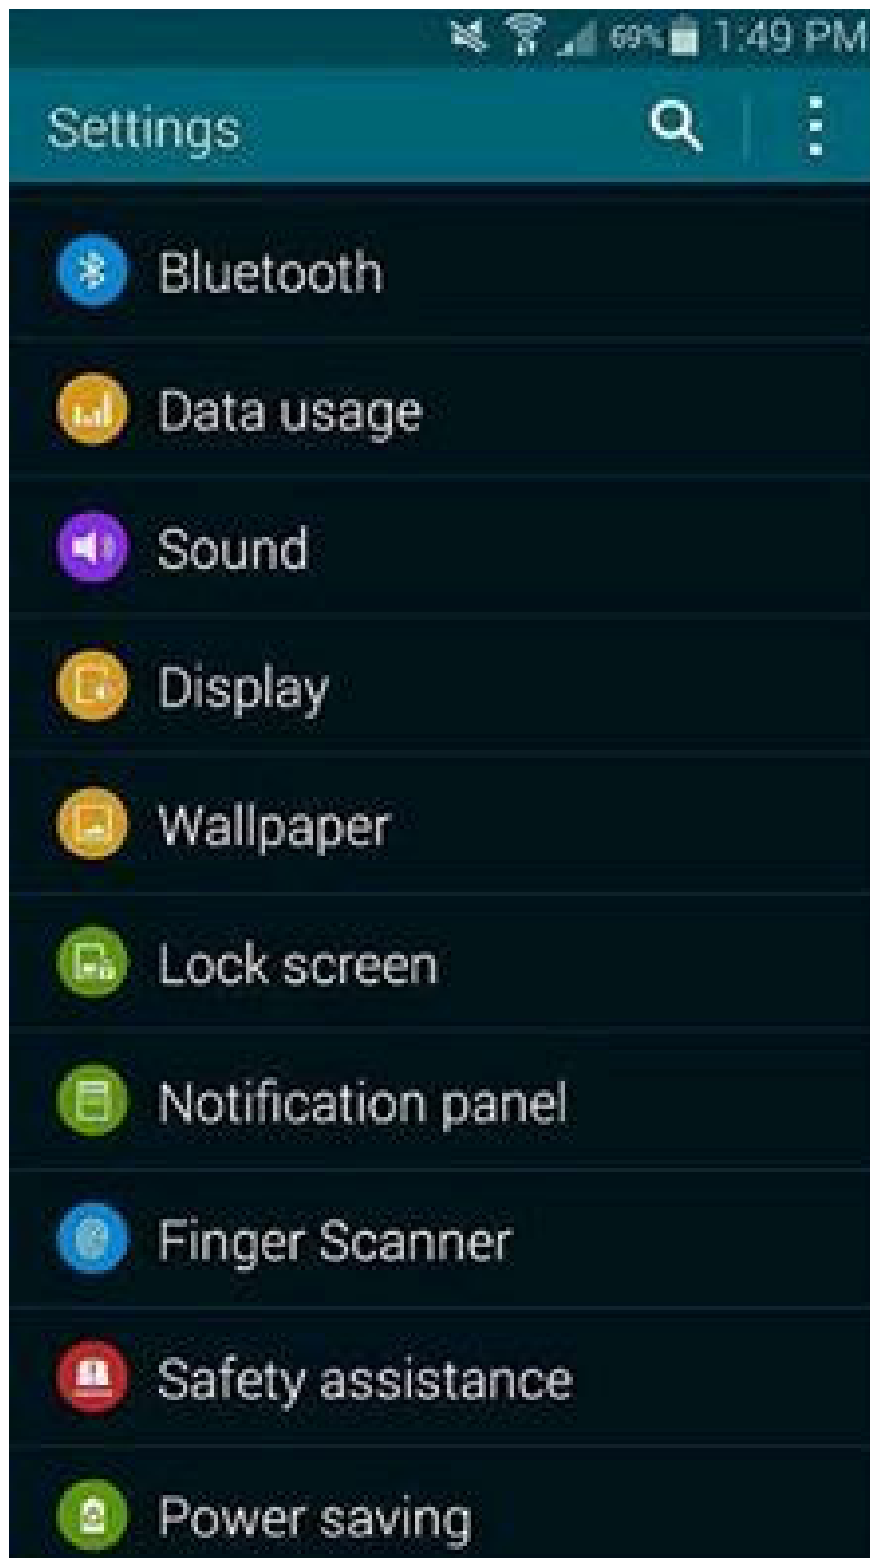

## 3- Tips to save time when using a computer

What do you usually do when sitting on a computer? Play games, surf the web, check mail, edit documents or handle graphics? No matter what computer you use, the 10 tips below will definitely save you a lot of time. You can *open the program with the shortcut, open an open program window, explore the rest of the Send to menu,*

*customize the Send to menu, delete the operation history in Windows, explore the power of search. Windows search, customize Jump List, add folder to Favorite list, create shortcuts for program, browse web, open file . from Taskbar. See details!*

## **4- How to change the font for Android device**

In fact, there are many changing options to refresh for Android devices such as changing wallpaper, themes, how to start or even change the speed for the device. In addition, there is a less-known and used option that changes the font for the device. The font change for the device is made easy and it will help users reduce eye strain if the font is too small or fit the screen if the current font is too large. **See details!**

## 5- How to remove the inner dust of Laptop?

Laptop is quite convenient for mobile work, compact and easy to carry when traveling. And the lowest after two years of use, it may have stuck a lot of dirt inside the machine. The most dusty location is defined as a radiator fan, and when it is caused by dust, its cooling performance will be significantly reduced, making the laptop hotter and more likely to cause sudden shutdowns or hazards. More dangerous than causing fire from inside. Therefore you should pay attention to this issue if you want to use the laptop in a long and safe way. **See details!**

1. **If you can remove your laptop:** If you decide to remove the laptop and proceed with cleaning, you should first consult the documentation and video tutorials to remove your laptop from Google and Youtube (pretty much and abundant). Then proceed to remove the sequence and carefully from screws, batteries . the problem is that you should carefully remember the location of each screw to avoid the situation "enough but left over".
1. **If not, remove the laptop:** You should first place the laptop in a clean and windless place, use a hand-held compressed air tank into the heat sink slot and blow some air into it. If you're lucky, most of the dust will be blown out through the laptop's heat sinks. This method does not remove any dirt from the inside but it will reduce the amount of dust inside the machine such as heat sinks or radiators.
