The skills of IT workers should know, fix laptop errors should not be in sleep mode, the unknown things about iPhone 6 camera, short Google saved the location history on iOS and Android, the simple way of protecting data Data and accounts, the differences between iOS 8 and iOS 7, . are the most interesting tips of the week.

1- 6 IT skill people should know

A good IT specialist needs to know a little about everything. Here are 6 skills that you need to master, regardless of your life in the IT world. Anyone in an IT environment for more than 10 minutes knows that troubleshooting is a huge part of the job.

Some items - don't need to know what it is - if you get unexpectedly damaged and in completely new errors, it will depend on whether you want to fix it or not. It doesn't matter how many books you've read, you know how to use them, or what you've eaten at breakfast, what's important is how quickly you can connect things and pull I'm out of trouble.**See details !**

2- Fix the error of laptop turn on when not in sleep mode

Many times when our computer is working, but there is a problem when you go out or do something, when you return to the computer it is in sleep state, you use all kinds of ways that the computer should not even click the power button . Many people can remove the battery or turn off the laptop completely.

The above problem is because the machine is being set to sleep for a certain period of time when not using the device. Most when the machine is in Sleep mode, you just need to move the mouse or click on the keyboard, the device will return to normal. However, there are some cases where the power supply for the machine is faulty (*not providing enough electricity*), so the device does not come back to the screen when it is in sleep mode. **See details!**

3- 4 things you don't know about iPhone 6 camera

The big screen is the most noticeable change in the two new iPhone 6 models that Apple has just released, but there are still many new, interesting and convenient features in this duo that previous versions do not have. The iPhone 6's camera will be more powerful and superior, though in theory, their resolution hasn't changed, the resolution of the sensor has remained the same since the iPhone 4S so far.

The pixel size of both iPhone 6 models is 1.5 microns, the lens still includes 5 layers and the opening still stands at $f / 2.2$ - which is no different from the iPhone 5S camera. **See details !**

4- Prevent Google from saving location history on iOS and Android

Many smartphone users do not know, Google is collecting a lot of data, and one of them is tracking the location of users of Android or iOS smartphones and saving it. This means that users have a reason to be concerned about privacy protection. If you want to prevent this completely, you can do so as instructed below. **See details !**
