

## Super laptop A770 Ruggedized Notebooks

Falling from a height of 1 meter to ground still works well, storms of desert sand or frosty prices up to 0 ° C can not threaten it, even pouring a whole bottle of water on it does not lose. It is a k & y laptop

**Falling from a height of 1m into the ground still works well, storms of desert sand or a sharp price of 0 ° C can not threaten it, even pouring a whole bottle of water on it does not lose. It is a notebook with the symbol A770 called Ruggedized Notebooks.**

As expected, a 'blow' computer can withstand and overcome the harsh conditions in the working environment. Leading in endurance today in notebooks.

Ultrarobust Ruggedized Notebooks are very popular and appreciated by law enforcement officers, military personnel, technical experts or those who work outdoors. For ordinary users, it is not very interesting because the price is quite expensive, less features than a regular laptop.

Cases and handles (very solid) are made with a mixture of magnesium and the contours of the case covered by a rubber layer that prevents moisture and bumps into the "hard drive". Another feature in the design of the machine is that the keyboard is made of a waterproof substance, meaning that if water is poured up, the liquid will flow downwards, escaping.

Ruggedized Notebook "super durable" Notebook

On the market today, apart from Panasonic's mass-produced Toughbook, there is also Rocky's Roda model and some "solid laptops" from Siemens and Itronix.
