

Super machine gun fired 1 million bullets in 1 minute

This world's fastest shotgun capable of firing at unbelievable speeds up to a million bullets in a minute can destroy a large number of enemy troops in an instant that amazes many people.

This world's fastest shotgun capable of firing at unbelievable speeds up to a million bullets in a minute can destroy a large number of enemy troops in an instant that amazes many people.

1. Russian new robots can shoot themselves with two hands like humans
2. List of the world's best 10 handguns

Previously, the title of the world's fastest shotgun belonged to the 7.62 mm M134 Minigun M134 Minigun rotary machine gun made by the US in the 60s of the last century. This super-machine gun has a firing rate of about 6,000 tablets per minute, which is 100 capsules per second, 10 times more than regular machine guns.

But that speed is still far below that of Australian-made Metal Storm gun with incredible firepower of up to 16,000 bullets per second, which is about 1 million bullets in a minute. Super this machine gun can create a rain of bullets at enemies.

Metal Storm was built using electronic bullet technology, ie bullets are placed in succession together in the same barrel, in between them are launchers. Super machine guns have 1-0-2 this point is fire points for electric guns, not metal fire like other guns. This ensures all firing doses are in succession, the bullets are fired sequentially from a single fire point. The only movement in the firing process was bullets.

With such a special structure, Metal Storm almost never blocks bullets or fails, so maintenance is also easier than other machine guns.
