

Super portable laptop with battery 'terrible' about Vietnam

Lenovo has just announced the latest version of the best-selling ultraportable laptop in 2010- ThinkPad X220. Product converges enough features that an entrepreneur needs as light, battery life 'terrible' (more than 15 hours), strong configuration, durability and high reliability

Lenovo has just announced the latest version of the best-selling ultraportable laptop in 2010- ThinkPad X220. The product converges enough features that an entrepreneur needs such as light, battery life 'terrible' (more than 15 hours), strong configuration, durability and high reliability .

ThinkPad X220 is designed to be lightweight and weighs only about 1.3kg and 12.5-inch screen (high definition) but works 75% faster than other ultraportable laptops equipped with low-performance CPU. The touchpad section is also designed to be more spacious than 45% so that users can freely roll, click and multi-point actions. On the other hand, the floor below the keyboard has large drainage holes to fill up so when accidentally pouring water onto the keyboard, it doesn't cause "death". Moreover, the design is also improved to increase the durability of the machine by 50%.

The product is equipped with Intel Core i5 processor for fast processing and smooth multitasking; Intel HD graphics card delivers twice the speed of applications, video playback, image editing and web display compared to previous versions. About the port, the device is equipped with USB 3.0 port, giving data transfer speed 10 times faster than USB 2.0 port on other laptops today.

Much improved in terms of design but the ThinkPad X220 still retains definition of "traditional ancient" of the old ThinkPad.

Furthermore, it is equipped with a separate keyboard noise reduction technology, LED-based microphone mute button, Instant Resume function that helps maintain connections for up to 99 minutes in the state 'sleep', reducing the need to log in and reconnect between meetings (video conferences); Lenovo Enhanced Experience 2.0 helps to minimize boot time, shutdown and restore from sleep state.

As expected, ThinkPad X220 will be sold in Vietnam market from the end of April to about 28 million VND.
