MSI has just introduced GX723, a desktop replacement model with a 17-inch widescreen display, supporting powerful graphics card GeForce GT 130M 512MB. It supports Turbo Mode, which supports overclocking Core 2 Duo processors to achieve higher speeds. This feature only works when the user plugs the power directly into the device.

MSI's new gaming laptop runs on Intel Centrino 2 platform, up to 4 GB RAM, 320 GB optional hard drive or 500 GB, integrated 5 "dot" speaker system for Dolby audio. The size of the GX723 is 395 x 278 x 26.5 mm weighing 3.2 kg including the battery, which is made of aluminum and metal, very sturdy.

Above the screen is a 2 Megapixel webcam, this model supports standard Wi-Fi b / g / n connection, extended connectivity including HDMI, 3 USB ports, PCI Express slot and 4-in-1 card reader. , this model also supports optional 6 or 9 cell batteries and Blu-ray or DVD drives.

There is currently no information on price and launch time of this model.
