

Super speed MacBook Pro series released in September

According to AppleInsider, in September, Apple will introduce the new MacBook Pro with faster processor speed.

According to AppleInsider, in September, Apple will introduce a new MacBook Pro with faster processor speeds.

Last week, Intel launched super-speed versions of the Sandy Bridge processor line, which is used in the MacBook Pro.

So, even though the ' *super speed* ' MacBook Pro has not yet been released, experts have *foreseen* what processors will be applied, namely 2.0 GHz-2.4 GHz (faster clock speeds). 19.9%); 2.2 GHz-2.5 GHz (clock rate faster than 13.6%); 2.3 GHz-2.7 GHz (faster clock speed of 17.39%).

All of these chips are Quad-Core, and will replace the current Core i7 Quad-Core chips on 15- and 17-inch MacBook Pro models.

Meanwhile, the 13-inch MacBook Pro, which uses a Core i7 Dual-Core chip, will probably be accelerated from 2.7 GHz to 2.8 GHz.

With this new series of laptops, Apple will help users temporarily forget the desire for the new high-speed Ivy Bridge chip that Intel will launch around March or April next year.
