

Surface Earbuds, Microsoft postponed the launch date of true wireless headphones

delaying the launch of the Surface Earbuds will certainly disappoint many.

This information is sure to disappoint many people because the wireless headset completely owns this unique design that created a craze on many technology forums when Microsoft was first introduced on the sidelines of an event. launched the new Surface Pro 7, Surface Laptop 3 and Surface Pro X in October.

More specifically, Microsoft Hardware Product Manager Panos Panay recently made an official announcement on Twitter that the Surface Earbuds product line will be postponed to Spring 2020. bring the best experience to the customers', besides there is not any details related to the technology mentioned. Earlier, the giant Redmond plans to officially launch its first true wireless headset model in December to serve the shopping season later this year.

This is clearly Microsoft's unfortunate decision because this delay makes them continue to lag behind other major competitors in the true wireless headset market such as Amazon with Echo Buds or Apple with AirPods and AirPods Pro. sell very well, sell best. Moreover, the end of the year is the occasion where consumers pay the most, and if they withdraw their pockets for the above-mentioned products right on this occasion, sales of the Surface Earbuds will certainly be affected.

The Surface Earbuds are completely wireless headphones that were first introduced by Microsoft in October 2019 as part of the launch of some of its key hardware devices. The product is expected to sell for \$ 249 (approximately 5.7 million) and is designed by Microsoft to provide the 'best-in-price' experience in both sound quality and smart gadgets. Each headset will be equipped with a pair of integrated microphones that support conversations and interact with virtual assistants and the ability to support up to 60 different languages.

In addition, the Surface Earbuds can also be fully compatible with Microsoft Office applications, such as controlling slides in PowerPoint by swiping the touch area on the headset, and many other smart features.

Hopefully at the official launch, Surface Earbuds will become a truly complete headset, worthy of the wait from the user.
