Photos and videos detailing the process of removing components in the "white shirt" of Apple Macbook plastic cover, new Unibody design.

After the plastic lid, the components and circuit boards lay neatly.

First, remove the built-in battery.

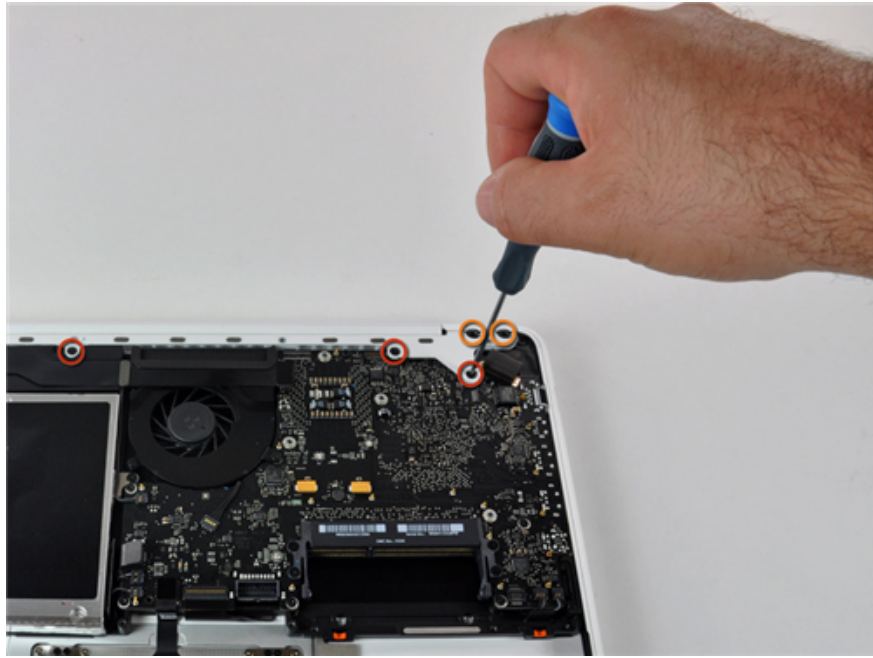

Remove RAM.

Remove the HDD hard drive.

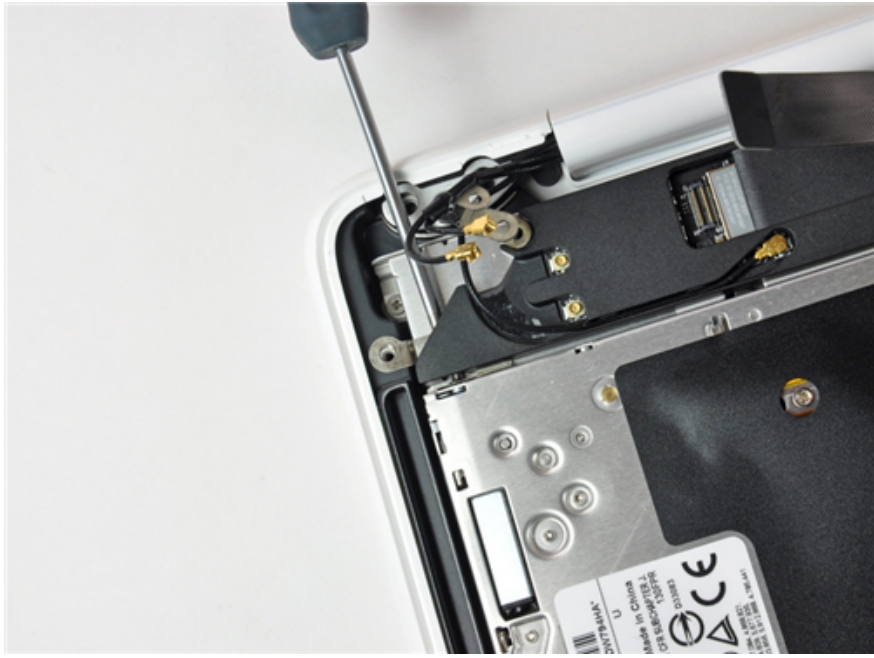

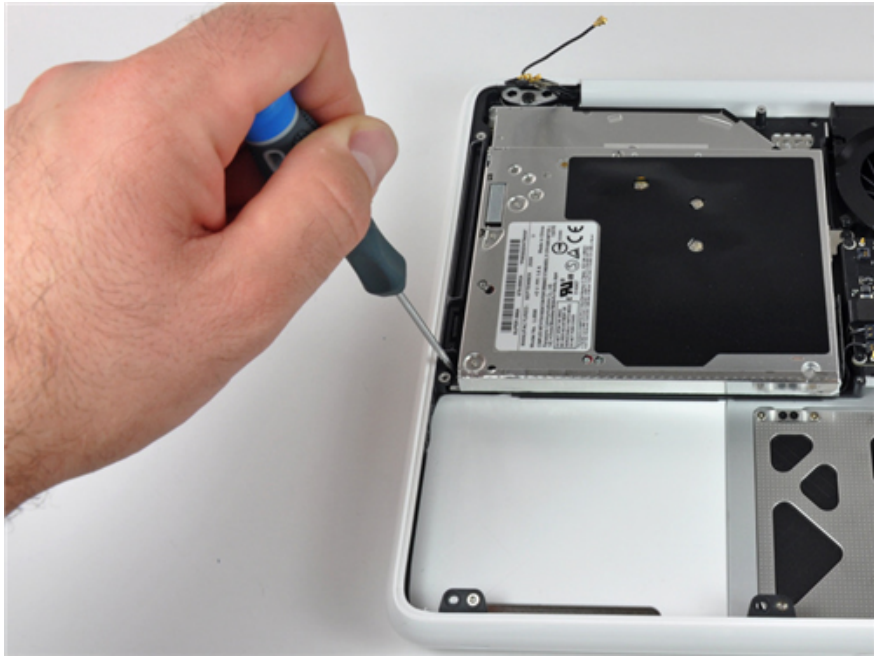

Remove the support and protection burrs.

Bluetooth card.

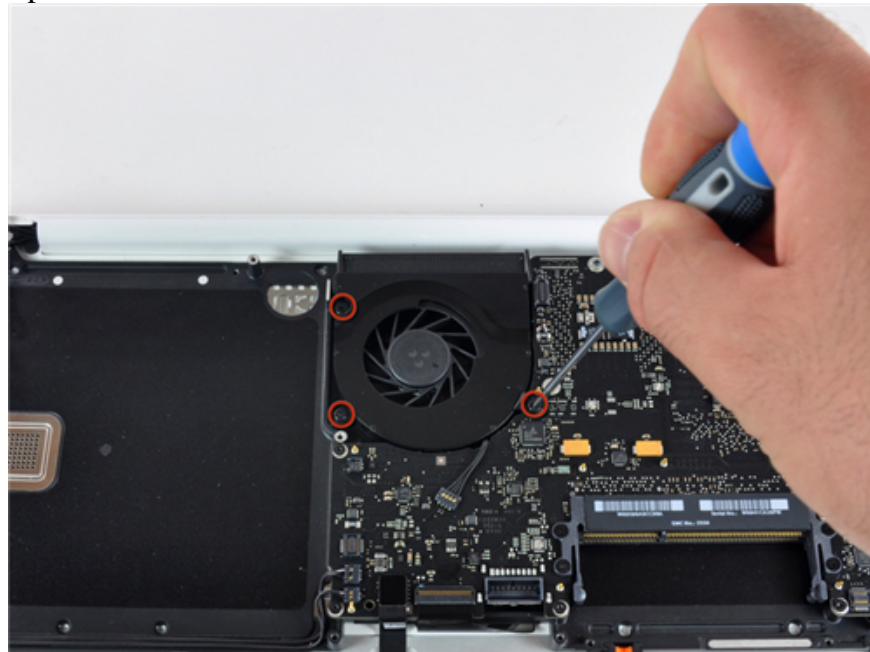

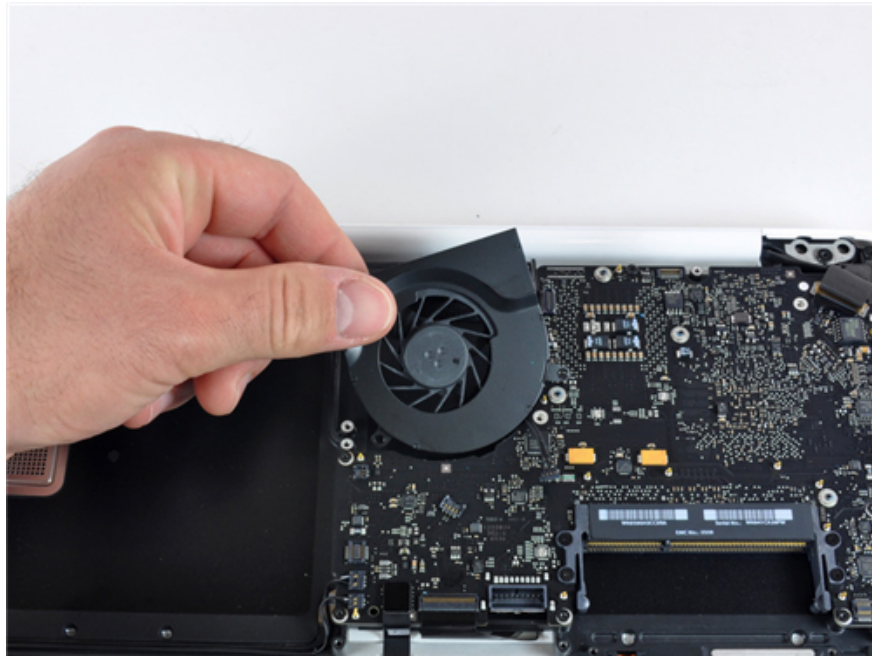

Remove DVD optical drive.

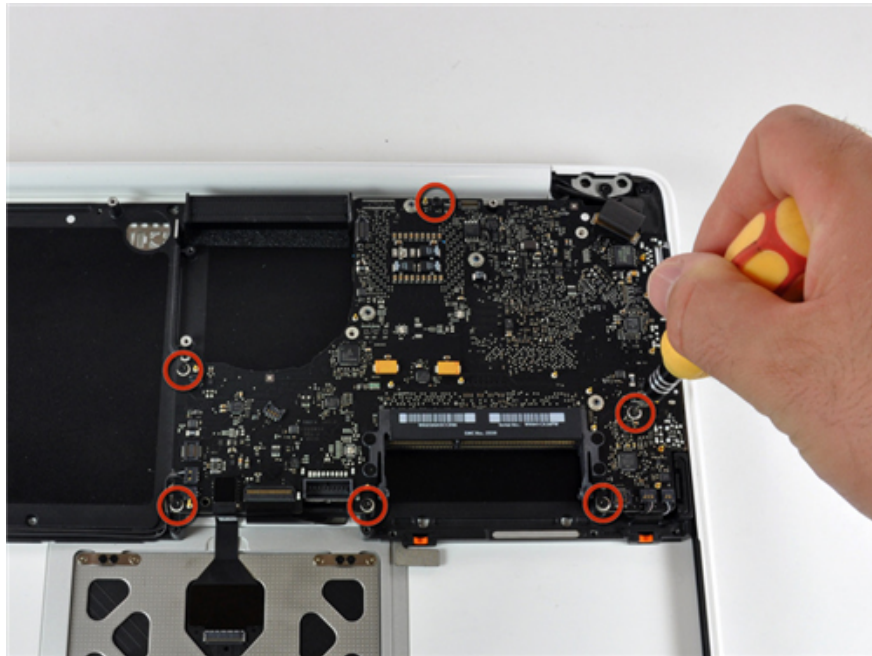

Panasonic SuperDrive optical drive.

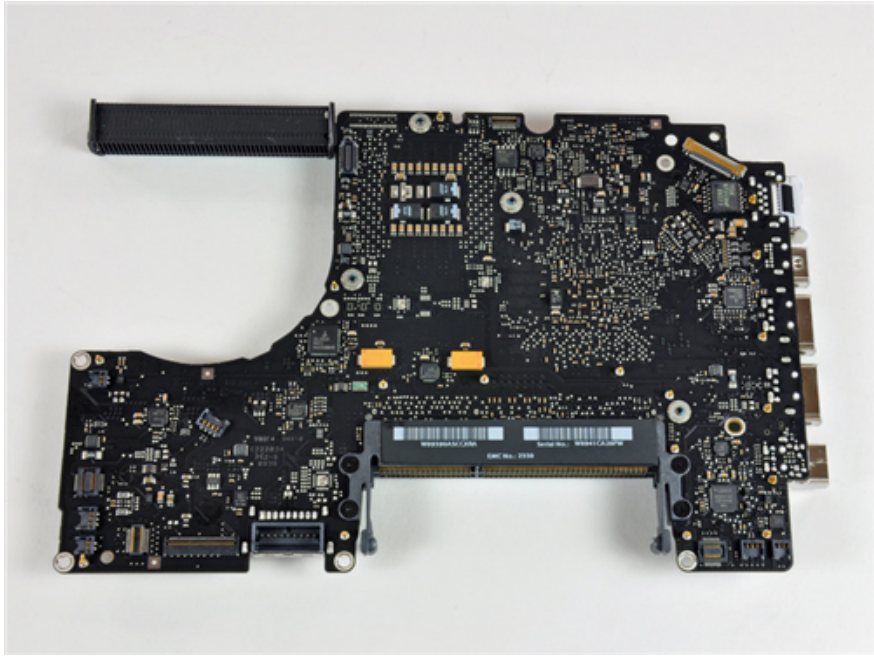

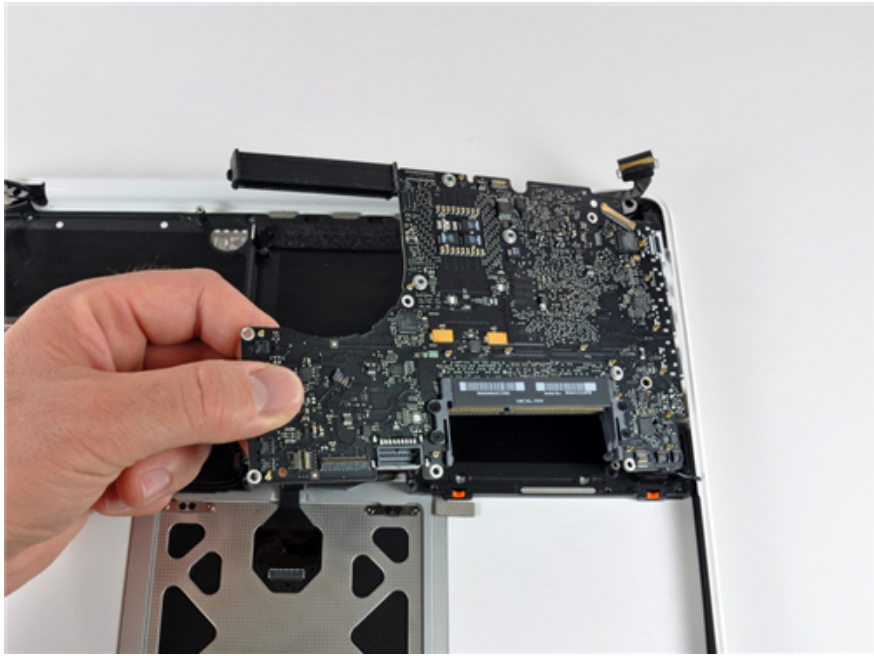

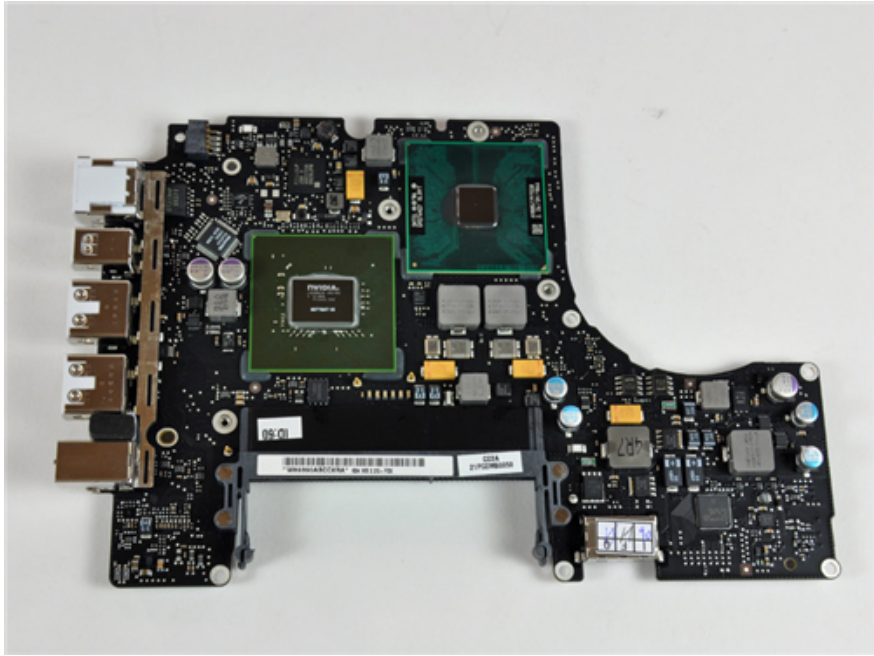

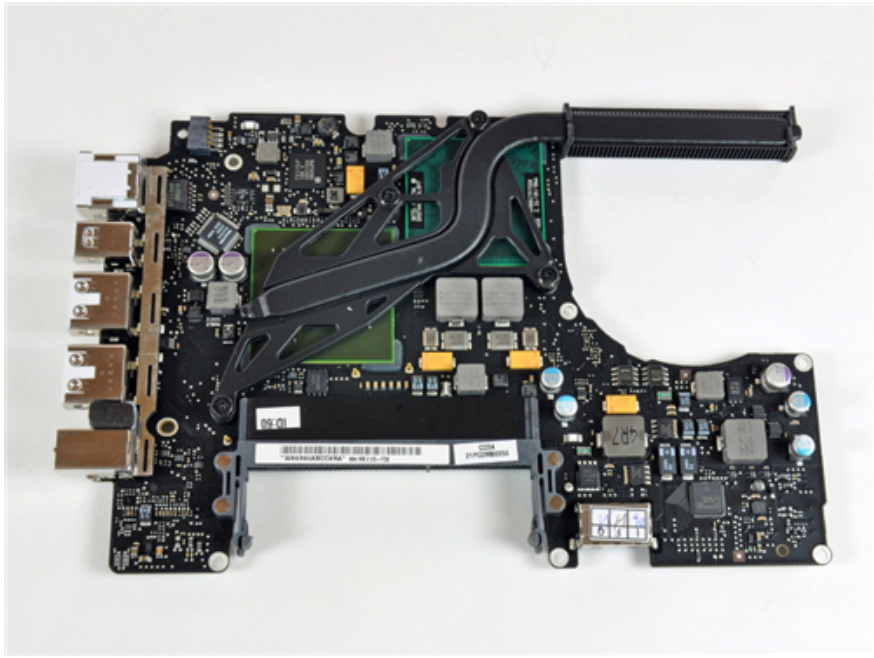

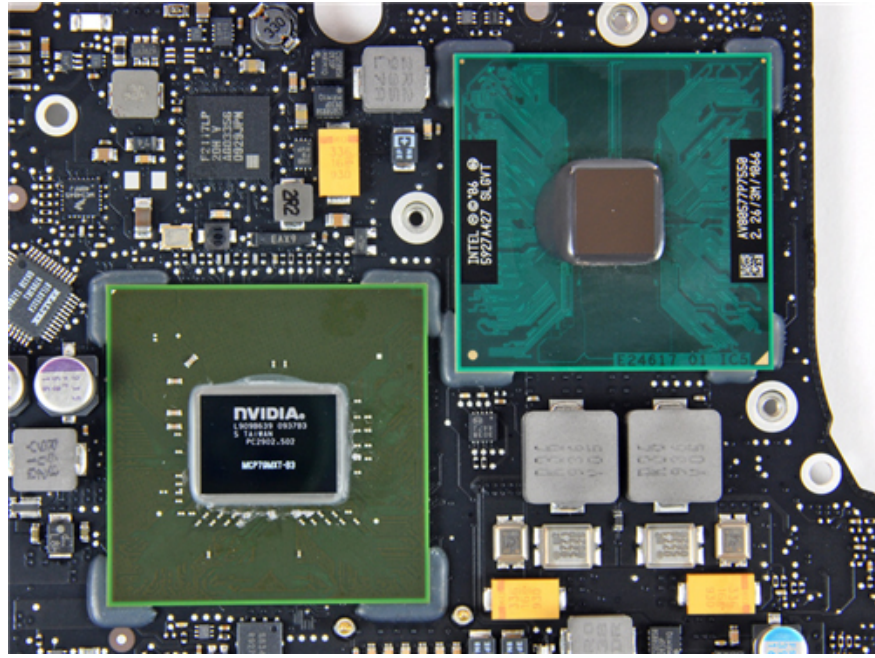

Small heat sink fan.

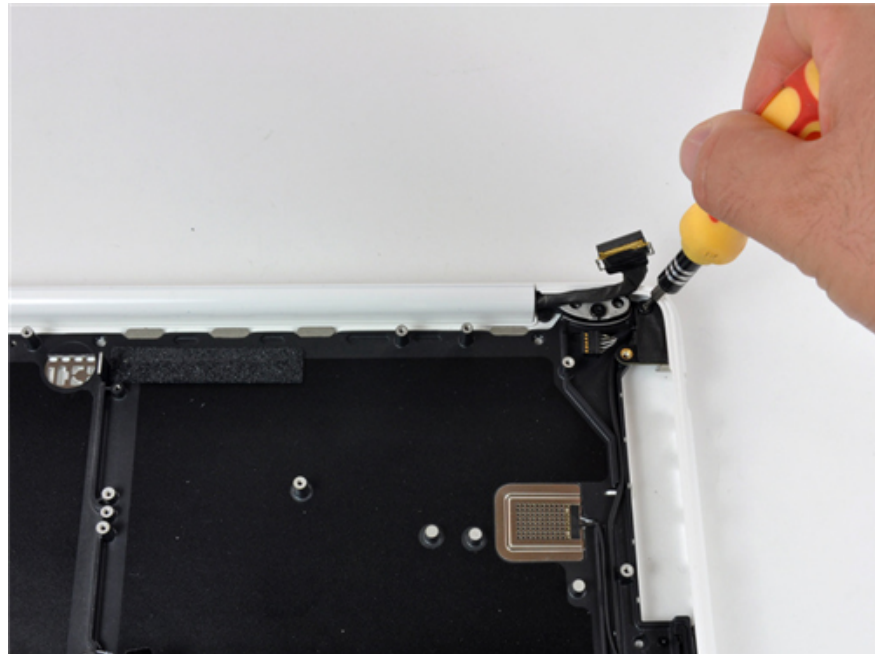

Remove the motherboard.

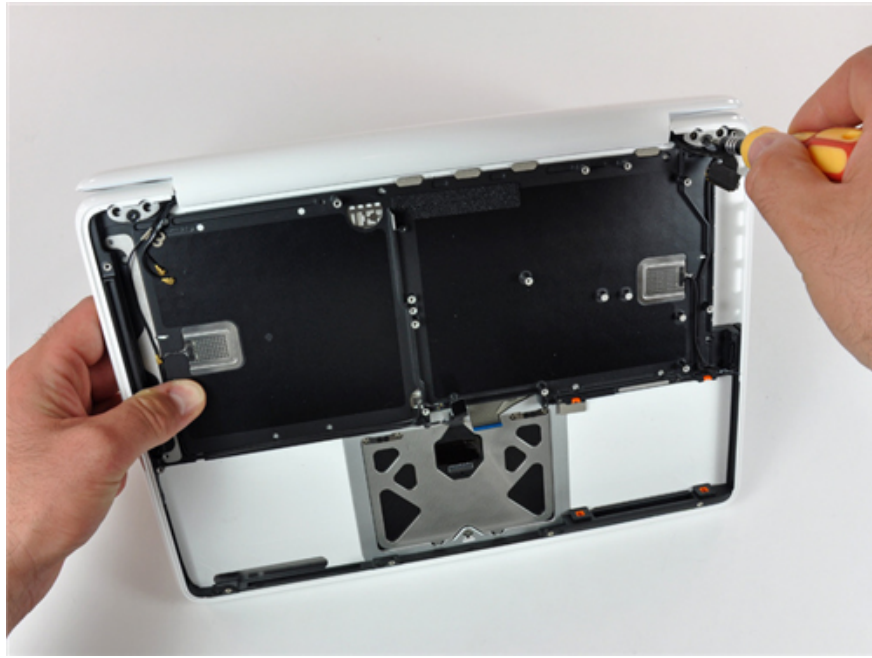

Nvidia graphics chip and Intel CPU.

Remove the screen.

All components are under the "jacket case" of the new Apple Macbook plastic case.
