

Symantec introduced a data protection solution

Security firm Symantec yesterday released a solution for Symantec Data Loss Prevention 10 (DLP) data loss with the industry's first open mechanism.

Security firm Symantec yesterday released a solution for Symantec Data Loss Prevention 10 (DLP) data loss with the industry's first open mechanism.

The new FlexResponse feature of Symantec Data Loss Prevention 10 helps enterprise security groups apply policy-based security mechanisms to files containing important data, including encryption or ERM (risk management in the business). Currently, the combination of DLP and other IT solutions is being done manually.

The latest support for XML and Web Services helps DLP 10 send DLP data to any application or reporting system, including enterprise security dashboards or compliance solutions, such as Symantec Control Compliance Suite compliance solution set.

New integration with Symantec Workflow will allow DLP 10 users to perform policy-based tasks such as terminal locking, automatic encryption with Symantec Endpoint Encryption solution, Symantec Endpoint Protection and other security solutions. by Symantec as well as other suppliers.

Symantec Data Loss Prevention 10 also has a policy and search support for 25 different languages, and there is a full version of Japanese, Chinese and French, according to which users use languages This can create policies,

manage and troubleshoot, and implement system management in the most comprehensive way.

Symantec Data Loss Prevention 10 solution is expected to be available in December 2009.
