

Tablet Tango launched next year, made by LG

No doubt, Project Tango is a very impressive and interesting project. The big question is, when will users get their hands on a Tango device?

No doubt, Project Tango is a very impressive and interesting project. The big question is, when will users get their hands on a Tango device?

During a Google I / O conference session, the ATAP team behind Project Tango revealed that the first device to the user will be available in early 2015 and is a tablet made by LG.

Google does not provide details about the exact launch time, pricing and configuration of the device. However, the first Tango was released to developers using NVIDIA Tegra K1 processors, so it is possible for consumers to have the same configuration. Anyway, it is still too early to confirm anything.

Meanwhile, a game using Tango sensors has also been developed by Limbic called *Zombie Gunship Reality* .
