

Take a look at the old Casio electronic watch, which is 'more' with new and modern features!

Let's take a look at the old Casio electronic clock, which adds new and modern features below!

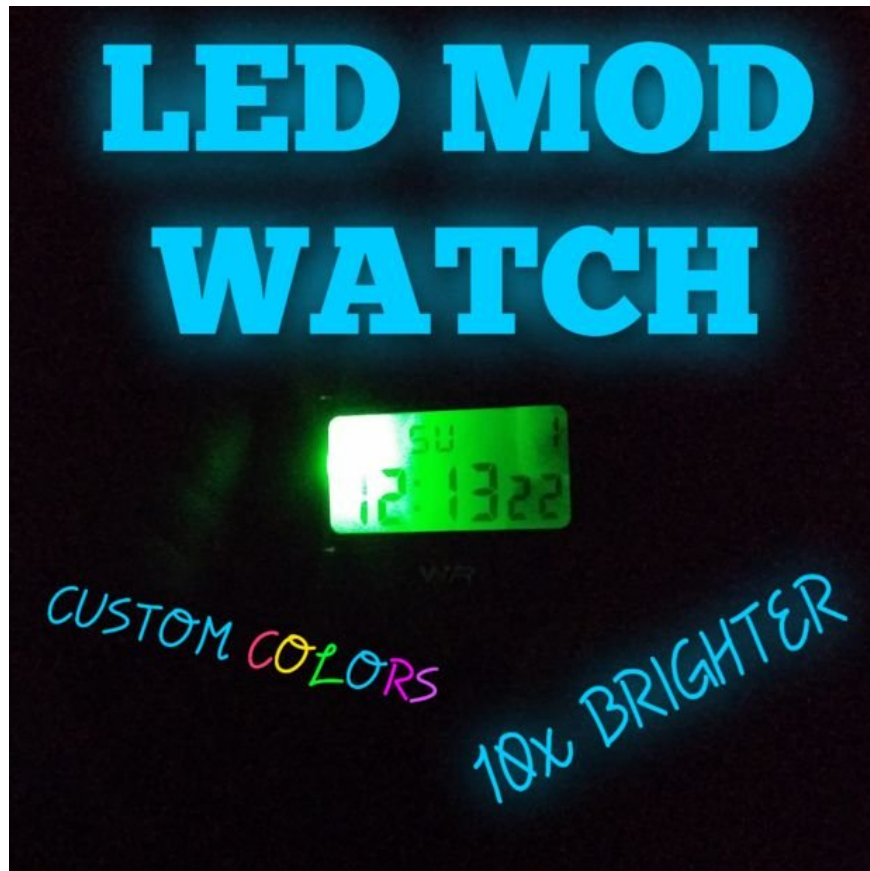

1. 14 extremely "cool" inventions will take you to the future

Once a disembodied father of most fathers at school and also a favorite of many AI Quaida terrorists, the **Casio F-91W watch** is an unforgettable **memory** of the 90s. Today's watch enthusiasts still crave and want to restore it.

For example, the YouTuber **NODE** guy in the integrated video for the Casio F-91W watch has some new and modern features. This YouTuber guy completely removed its " *legendary* " glass and replaced it with a much simpler glass when used only to show time. NODE removed the classic LED by using a brighter, white light. Next, NODE integrated an **ntag213 NFC chip** into the watch to create a communication method between it and a tablet. He also " *crams* " an **SD memory card slot** into that Casio F-91W watch to increase data storage capacity.

These simple watches are an "easy" and popular piece: Many members of *Watch Week* watchmaker forum say they have reversed the colors on the screen of the Casio F-91W watch. making it look like a negative film, as shown below:

Other users said they adjusted the LED light - which is famous for being extremely bad quality on the original watch, with ultra-bright light bulbs at 90-degree angles combining multiple color bands and brightness different.

Then turn the Casio F-91W watch into a waterproof watch. In order to achieve this level, they need to put oil on an electronic watch. According to *The Watch Site* forum member Homocaballus, this makes the watch

waterproof when exposed to a humid environment. Olive oil makes it green, while mineral oil has no color.

Youtuber **Artur Martins** tested the " *water resistance* " of his **casio F-91W watch** , and said it was still completely healthy after going to the coral and swimming with him for the past 3 years.

However, the sad thing here is probably the only electronic device that has not been " *leveled* " to run the legendary Doom shooter.
