

# Take the project to recreate Genshin Impact into the Minecraft world with a 1:1 . ratio

A group of gamers called Skyblock Squad has successfully recreated the Mondstadt land of Genshin Impact into the Minecraft world.

Genshin Impact - one of the most famous games in the world at the moment has recently been reincarnated into Minecraft thanks to the efforts of a group of gamers called Skyblock Squad.

It is known that this project took a total of 400 hours of Skyblock Squad to rebuild the entire Mondstadt city of Genshin Impact on a 1:1 scale. In fact, this work only has a ratio of about 1: 1.15 because the Minecraft game itself has certain limitations in terms of graphics.

Through the shared images, we can see that the magnificent and large buildings of Mondstadt are reproduced in an extremely vivid and meticulous way in the world of Minecraft. Although the Pixel graphics make the scene a bit rougher, no one can deny the excellence of this work.

Before that, there was also another player trying to bring Genshin Impact into Minecraft. More specifically, it was a Vietnamese gamer named Nguyen Duy Hien and he and his friends built the entire Inazuma city of Genshin Impact in Minecraft.

According to the share of the Skyblock Squad team, they are planning to reproduce the entire map of Genshin Impact into Minecraft in the near future.
