

TCL enters smartphone territory with its own brand new product line

TCL finally unveils its first series of branded devices: TCL 10 5G, TCL 10L, and TCL 10 Pro. While they offer many powerful features, they all cost less than \$ 500.

If you feel you've heard of this product line before, it's because the company revealed to the press about the aforementioned phones at CES in January. TCL is expected to officially launch them at MWC in late February, but the event was canceled because of the corona virus.

And although the launch date is delayed a bit, we finally get detailed information about the configuration of the product line.

At \$ 449, the **TCL 10 Pro** is the most expensive model, available in two colors: Ember Gray (gray) or Mist Green (green), both with a dorsal finish finished in a rough pattern.

On the front of the device is a curved AMOLED panel, FHD + resolution, 6.47-inch size, with minimal bezels. There's also an in-display fingerprint sensor and 24MP selfie camera.

Inside, the device is equipped with Snapdragon 675 chipset and 4,500mAh battery.

On the back, TCL 10 Pro has a 4-lens camera cluster with a 64MP sensor; an ultra-wide 123 degree, 16MP wide-angle lens; a macro lens; and a 2.9 micromet low-light photography sensor.

For \$ 399, you get a **TCL 10 5G** , which is equipped with a 5G chip called Snapdragon 765. Although the 5G network has been popular in certain parts of the world, it will take a few years ago. when 5G became popular. So if you're not in a hurry to upgrade your phone right now, be patient and wait for 5G to become popular, which will be the right time to buy this phone.

In terms of configuration, TCL 10 5G has a 6.53-inch screen and a 16MP selfie camera. The back of the device is a 4-lens camera cluster with a 64MP sensor; an ultra-wide, 118-degree, 8MP wide-angle lens; a macro lens; and a depth sensor for taking photos that erase the background.

Like TCL 10 Pro, TCL 10 5G also has a 4,500mAh battery and supports reverse charging, allowing you to use your phone as a backup battery to charge other devices.

The TCL 10L has the cheapest price, \$ 249, so it is undoubtedly the most suitable phone for users with limited budget. It has a 6.53-inch FHD + screen and a 16MP selfie camera. On the back of the device is a 4-lens camera cluster and a traditional fingerprint sensor is located just below.

Like the two higher-end models, the TCL 10L camera cluster has a 48MP sensor; an 8MP ultra-wide angle sensor, the same depth sensor and a macro lens.

It uses Qualcomm Snapdragon 665 processor and 4,000mAh battery.

TCL has yet to announce the official launch date of the three new devices, only knowing they will be available in the US market later this year. The Chinese multinational corporation is well known for its TV product line, and you probably guessed it: its smartphones will all use TCL's "genuine" screen technology.
