

TCL introduces a unique triple and sliding screen smartphone

Recently, TCL has introduced two new phone models of the company with a unique screen mechanism that surprised many technology lovers. A new model in which can be folded into three thanks to two flexible hinges, the second model hides the screen inside the body by using a horizontal sliding mechanism.

Recently, TCL has introduced two new phone models of the company with a unique screen mechanism that surprised many technology lovers. A new model in which can be folded into three thanks to two flexible hinges, the second model hides the screen inside the body by using a horizontal sliding mechanism.

TCL triple screen smartphone

A triple screen smartphone merely uses a panel developed by TCL-CSOT. TCL has equipped two different hinges, DragonHinge and ButterflyHinge, which combine the folding styles of the Galaxy Fold and Mate X, allowing the device to be folded into three instead of only two like Samsung and Huawei smartphones.

The flexible AMOLED panel allows the device to turn a 10-inch screen when fully opened into a 6.65-inch device with an aspect ratio of 20.8: 9, 3K resolution.

Sliding screen smartphone of TCL

The second device has a unique side-widening screen, which allows from a 6.75-inch screen to slide out to an extra screen to increase the overall size to 7.8 inches. This sliding mechanism of the machine can not be used to pull open / close with the use of buttons.

When the inner screen slides out to expand, the software will be customized to automatically resize the display to fit.

Currently, the time and price of the two models have not been announced by TCL.
